The test engine version is a way of exam simulation that helps you get used to the atmosphere of Deep-Security-Professional Real Exam and solve the problems with great confidence.

Trend Micro Certified Professional for Deep Security Sample Questions (Q73-Q78):

NEW QUESTION # 73

New servers are added to the Computers list in Deep Security Manager Web config by running a Discover operation. What behavior can you expect for newly discovered computers?

- A. Any servers within the IP address range will be added to the Computers list, regardless of whether they are hosting a Deep Security Agent or not.
- B. Any servers discovered in the selected Active Directory branch hosting a Deep Security Agent will be added to the Computers list.
- C. Any servers within the IP address range hosting a Deep Security Agent will be added to the Computers list.
- D. Any servers within the IP address range that are hosting Deep Security Agents will be added to the Computers list and will be automatically activated.

Answer: C

Explanation:
When running a Discovery operation with Automatically Resolve IPs to hostnames enabled, it is possible that the discovery operation will find hostnames where Deep Security Manager can not.
Discovery is able to fall back to using a WINS query or NetBIOS broadcast to resolve the hostname in addition to DNS. Deep Security Manager only supports hostname lookup via DNS.
* Computers identified with this method can be automatically assigned a group, but not a policy.
* Agent software found on those computers will NOT be automatically activated.
* If a computer is listed through other detection methods, it will NOT be listed in the results of this search.
Study Guide - pages (345, 80)

NEW QUESTION # 74
Based on the following exhibit, what behavior would you expect for the Application Control Protection Module?

- A. Since this computer is in Maintenance Mode, Application Control will allow any Blocked software to temporarily run
- B. Since this computer is in Maintenance Mode, new or changed software will be auto-matically added to the list of Allowed software in the currently active ruleset.
- C. Since this computer is in Maintenance Mode, updates to the Application Control Pro-tection Module will be applied.
- D. Since this computer is in Maintenance Mode, Application Control will ignore any Blocked software in the currently active ruleset.

Answer: C

NEW QUESTION # 75
The details for an event are displayed in the exhibit. Based on these details, which Protection Module generated the event?

- A. Firewall
- B. Integrity Monitoring
- C. Application Control
- D. Intrusion Prevention

Answer: D

NEW QUESTION # 76
Based on the following exhibit, what behavior would you expect for the Application Control Protection Module?

- A. Since this computer is in Maintenance Mode, updates to the Application Control Protection Module will be applied.
- B. Since this computer is in Maintenance Mode, Application Control will allow any Blocked software to temporarily run.
- C. Since this computer is in Maintenance Mode, new or changed software will be automatically added to the list of Allowed software in the currently active ruleset.
- D. Since this computer is in Maintenance Mode, Application Control will ignore any Blocked software in the currently active ruleset.

Answer: C

Explanation:
When Maintenance Mode is enabled for Application Control, any new or changed software is automatically added to the list of allowed software. This feature is intended to support software installation, patching, or upgrades without manual intervention. From the official documentation:
"When a computer is in Maintenance Mode, Application Control allows all new software to run and automatically adds it to the inventory of allowed software." References:
Trend Micro Deep Security Application Control Guide: Maintenance Mode

NEW QUESTION # 77
Which of the following are valid methods for pre-approving software updates to prevent Ap-plication Control Events from being triggered by the execution of the modified software? Select all that apply.

- A. Edit the inventory database file (AC.db) on the Agent computer to include the hash of the newly updated software. Save the change and restart the Deep Security Agent. The software updates will now be approved.
- B. Maintenance mode can be enabled while completing the updates.
- C. Software updates performed by a Trusted Updater will be automatically approved.
- D. Once the inventory scan has run when Application Control is first enabled, there is no way to update the inventory to incorporate modified software.

Answer: B,C

Explanation:
Normally, you will want Application Control to alert you when there are any unexpected software updates. However, some updates are expected and you will need provide allowances for these up-dates. Two methods for pre-approving software updates includes maintenance mode and trusted installers.
Explication: Study Guide - page (303-304)

NEW QUESTION # 78
......
