

300-615 PDF Cram Exam | Latest 300-615 Exam Fee

P.S. Free 2026 Cisco 300-615 dumps are available on Google Drive shared by TestPassed: <https://drive.google.com/open?id=1P0KPcly6-d52tsfPKDxq9Vc-8PLWP9EE>

For candidates who are going to choose the 300-615 practice materials, it's maybe difficult for them to choose the exam dumps they need. If you choose us, 300-615 learning materials of us will help you a lot. With skilled experts to verify 300-615 questions and answers, the quality and accuracy can be ensured. In addition, we provide you with free demo to have a try before purchasing, so that we can have a try before purchasing. 300-615 Learning Materials also have high pass rate, and we can ensure you to pass the exam successfully.

The benefit of obtaining the Cisco 300-615: Troubleshooting Cisco Data Center Infrastructure Exam Certification

- Cisco 300-615: Troubleshooting Cisco Data Center Infrastructure certified professionals have the knowledge to use the tools to complete the task efficiently and cost-effectively than the other non-certified professionals lack in doing so.
- Cisco 300-615: Troubleshooting Cisco Data Center Infrastructure Certifications provide opportunities to get a job easily in which they are interested in instead of wasting years and ending without getting any experience.
- Cisco 300-615: Troubleshooting Cisco Data Center Infrastructure Certification has more useful and relevant networks that help them in setting career goals for themselves. Cisco 300-615: Troubleshooting Cisco Data Center Infrastructure networks provide them with the correct career guidance that non-certified generally are unable to get.

Cisco 300-615 Exam, also known as Troubleshooting Cisco Data Center Infrastructure, is an assessment of the skills and knowledge of professionals dealing with data center infrastructure. Candidates who take 300-615 exam are expected to have experience in troubleshooting network infrastructure, storage networks, compute platforms, and management and automation tools. 300-615 exam measures a candidate's ability to identify and solve problems in complex data center environments, including physical and virtual network elements, application components, and storage systems.

Latest 300-615 Exam Fee - Exam 300-615 Introduction

This means a little attention paid to 300-615 test prep material will bring in great profits for customers, The pass rate is 98.95% for the 300-615 exam torrent, and you can pass the exam if you choose us. Besides, free demo is available for 300-615 PDF version, and you can have a try before buying. Privacy and security, 98 to 100 percent of former exam candidates have achieved their success by the help of our 300-615 Practice Questions. We assure you that we will never sell users' information because it is damaging our own reputation.

The Cisco 300-615 exam consists of multiple-choice questions and simulations that test the candidate's ability to troubleshoot and resolve complex data center infrastructure issues. 300-615 Exam is designed to be challenging and requires candidates to have extensive knowledge of data center infrastructure technologies, protocols, and best practices.

Cisco Troubleshooting Cisco Data Center Infrastructure Sample Questions (Q61-Q66):

NEW QUESTION # 61

Refer to the exhibit.

```
UCS-A(nxos)# show pinning border-interfaces active
-----+-----
Border Interface Status SIFs
-----+-----
Eth1/7 Active Veth96 Veth990 Veth991 Veth993
Eth1/8 Active Veth963 Veth974 Eth1/1/3 Eth2/1/7
Total Interfaces : 2
```

A network engineer traces the packet flow from the Veth991 of a blade server toward the core switch. The switch reports performance issues. What is the role of the interface Eth1/7?

- A. IOM network interface
- B. server interface
- C. IOM host interface
- D. fabric interconnect uplink interface

Answer: D

Explanation:

Explanation

E1/7 is border interface, which is used as uplink. All other veth interfaces are SIF, which stands for Server Interface.

NEW QUESTION # 62

The script fails to convert a JSON variable into a Python dictionary. Which action resolves the issue?

```

import yaml

json_output = '''
{
  "totalCount": "26",
  "imdata": [
    {
      "fvTenant": {
        "attributes" {
          "descr": "",
          "dn": "uni/tn-LuTest",
          "lcOwn": "local",
          "modTs": "2021-01-12T17:30:56.922+00:00",
          "monPolDn": "uni/tn-common/monepg-default",
          "name": "LuTest",
          "uid": "40546834"
        }
      }
    }
  ]
}

json.loads(json_output)

--output omitted--
json.decoder.JSONDecodeError: --output omitted--

```

- A. Fix the JSON syntax by modifying "attribures" to "attributes".
- B. Define a json_output as a YAML object, yaml json_output
- C. Use a `json.dumps(json_output)` function
- D. Invoke a function `yaml.loads(json_output, decoder='json')`

Answer: C

NEW QUESTION # 63

Create LDAP Provider

1 Create LDAP Provider

2 LDAP Group Rule

Hostname/FQDN (or IP Address): 192.168.100.1

Order: lowest-available

Bind DN: CN=ucslogin,DC=lab,DC=test

Base DN: DC=lab,DC=test

Port: 389

Enable SSL: ☐

Filter: sAMAccountName=\$userid

Attribute: sAMAccountName=\$userid

Password: ••••••••

Confirm Password: ••••••••

Timeout: 30

Vendor: ☒ Open Ldap ☐ MS AD

Next > Finish Cancel

Refer to the exhibit. A network engineer configures an authentication domain through an LDAP provider on the Cisco UCS Manager for users from different companies to log into their respective organizations created in the UCS Manager. The engineer tests the configuration and notices that any user has login access to any organization in the UCS Manager. Which action should be taken to resolve the issue?

- A. Configure the Attribute field with sAMAccountName=\$company
- B. Configure the Filter field with sAMAccountName=\$company
- C. Configure the Attribute field with the company
- D. Configure the Filter field with the company

Answer: B

Explanation:

Configure the Filter field with sAMAccountName=\$company is the appropriate UCS remediation because the symptom maps to a specific managed object rather than a generic server failure. Cisco UCS abstracts hardware through service profiles and policies; therefore, issues involving UCS, UCS Manager, LDAP must be corrected where UCS Manager programs the adapter, boot target, firmware, management certificate, pool qualification, or fabric interconnect state. The selected answer restores that programming path. The other options may appear plausible, but they do not correct the object that UCS uses to derive operational state. For example, boot failures require the correct vHBA/iSCSI target and LUN policy, discovery issues require the proper physical and management path, and firmware failures require the documented recovery action for the failed FSM stage. The correct validation is to inspect the associated fault, confirm inventory acknowledgment, verify the policy under the service profile or equipment tree, and then recheck boot or connectivity behavior after the FSM completes.

NEW QUESTION # 64

Refer to the exhibit. The FC-CORE2 switch connects to the FC-EDGE12 switch via port channel 120. How many links must fail to cause the port channel state to change to down?

```

FC-CORE1# show interface port-channel 120
port-channel120 is trunking
  Port description is FC Uplink to FC-EDGE12
  Hardware is Fibre Channel
  Port WWN is 24:78:54:7f:ee:d8:33:99
  Admin port mode is E, trunk mode is on
  snmp link state traps are enabled
  Port mode is TE
  Port vsan is 3003
  Speed is 32 Gpbs
  admin fec state is down
  oper fec state is down
  Trunk vsans (admin allowed and active) (3003)
  Trunk vsans (up) (3003)
  Trunk vsans (isolated) ()
  Trunk vsans (initializing) ()
  5 minutes input rate 1408 bits/sec, 176 bytes/sec, 2
frames/sec
  5 minutes output rate 192 bits/sec, 24 bytes/sec, 2 frames/sec
83966661793 frames input, 165567296408936 bytes
  0 discards, 0 errors
  0 invalid CRC/FCS, 0 unknown class
  0 too long, 0 too short
3097185105 frames output, 275024584632 bytes
  0 discards, 0 errors
  55 input OLS, 27 LRR, 7 NOS, 0 loop inits
  34 output OLS, 16 LRR, 51 NOS, 0 loop inits
Member[1] : fc1/3
Member[2] : fc1/4
Member[3] : fc7/3
Member[4] : fc7/4
Interface last changed at Fri Apr 21 00:21:11 2017

```

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

A port channel is operationally up when at least one.

https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus5000/sw/layer2/b_Cisco_Nexus_5000_Series_NX-OS/_b_Cisco_Nexus_5000_Series_NX-OS__chapter_0111.html

NEW QUESTION # 65

Refer to the exhibit.

The FCoE traffic fails to traverse the vfc2 interface. The VSAN 102 is configured for vfc2. Which action resolves the issue?

- A. Activate DCBX on the interface e101/1/2
- B. Enable LLDP on the neighbor switch
- C. Enable LLDP on the interface vfc2
- D. Activate DCBX on the N9K switch

Answer: B

Explanation:

The correct answer is Enable LLDP on the neighbor switch. Cisco MDS and Nexus SAN troubleshooting is driven by fabric state: the host and target must be in the correct VSAN, must complete FLOGI/PLOGI where applicable, and must be permitted by active zoning, fcdomain, FSPF, NPV/NPIV, or port-security policy. This question focuses on VSAN, FCoE, DCBX, LLDP, so the selected action fixes the dependency that prevents the initiator, target, or inter-switch link from becoming usable. Cisco documentation emphasizes checking VSAN membership, active zonesets, correct port mode, fabric binding, device-alias consistency, and the relevant FC databases before changing unrelated server settings. The distractors either target a different database, use the wrong port role, or would not cause the observed Fibre Channel state to change. After the fix, the engineer should confirm the interface state, FLOGI database, name-server entries, zoneset activation, and successful initiator-to-target reachability with tools such as fcping or fabric show commands.
