Valid Test Mule-Dev-202 Bootcamp | Latest Mule-Dev-202 Exam Guide

ActualTestsQuiz has collected the frequent-tested knowledge into our Mule-Dev-202 practice materials for your reference according to our experts' years of diligent work. So our Mule-Dev-202 exam materials are triumph of their endeavor. By resorting to our Mule-Dev-202 practice materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our Mule-Dev-202 training engine, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our Mule-Dev-202 exam questions.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q14-Q19):

NEW QUESTION # 14

The MuleSoft development team at Northern Trail Outfitters creates a Mule application that interacts with several APIs and RPA processes. The team needs to share this application with other teams to help them create similar applications. How should the Mule application be published in Anypoint Exchange to meet this requirement?

- A. Connector asset
- B. Custom asset
- C. Template asset
- D. API asset

Answer: C

Explanation:

To share a Mule application that interacts with several APIs and RPA processes with other teams for creating similar applications, publishing it as a Template asset is the best approach:

Template Asset:

A Template in Anypoint Exchange is designed to provide a reusable solution that can be easily adapted for different use cases. It includes predefined integration logic and configurations that can be used as a starting point for new projects.

By publishing the Mule application as a Template, other teams can leverage this pre-built solution, customize it to their specific needs, and ensure consistency in integration practices across the organization.

Anypoint Exchange Templates Documentation

NEW QUESTION # 15

Northern Trail Outfitters develops an API to look up manufacturer rebates. This API will be consumed internally by the website's backend and the RPA bots used by its customer service representatives.

How should this API be shared within the organization?

- A. Example assets should be published to the private Exchange.
- B. The API asset should be published to the public Exchange portal.
- C. The API's RAML specification should be stored in a SharePoint repository.
- **D. The API asset should be published to the private Exchange portal.**

Answer: D

Explanation:

To effectively share an API internally within an organization, publishing the API asset to the private Exchange portal is the best approach:

Private Exchange Portal:

The private Exchange portal within MuleSoft Anypoint Platform is designed for sharing APIs, connectors, templates, and other assets within an organization. It provides a central repository that is accessible to all relevant teams and departments.

Access Control and Security:

By using the private Exchange, you can control access to the API, ensuring that only authorized internal users, such as the website's backend team and customer service representatives using RPA bots, can consume it.

Ease of Use:

Publishing to the private Exchange makes it easy for internal teams to discover, access, and reuse the API, promoting consistency and reducing duplication of effort.

NEW QUESTION # 16

Northern Trail Outfitters is building a hyperautomation solution using Salesforce and MuleSoft. They need to use Salesforce Flow to automate a multi-departmental process in an external system and capture the outcome in Salesforce.

How should the Salesforce Flow solution be structured to meet this requirement?

- A. An evaluation flow which evaluates when the process is completed and updates Salesforce records
- B. Parent and subflows invoked by REST API to capture user inputs and update Salesforce records
- C. An autolaunched flow invoked by REST API to update Salesforce after the process is completed
- **D. A Flow Orchestration to automate the multi-departmental process and update Salesforce records**

Answer: D

Explanation:

Salesforce Flow Orchestration is designed to manage complex, multi-step business processes that span multiple departments and systems. Here's how it can be structured to meet the requirement:

Automate Multi-Departmental Process:

Use Flow Orchestration to define and manage the steps involved in the multi-departmental process. It allows you to break down the process into stages and define the sequence of actions and approvals required.

Capture Outcome in Salesforce:

After completing the external process, Flow Orchestration can be configured to update Salesforce records with the outcome. This ensures that the results of the automated process are reflected within Salesforce.

Orchestration Capabilities:

Salesforce Flow Orchestration provides features such as task assignments, decision elements, and complex branching logic, which are ideal for managing multi-departmental workflows.

Salesforce Flow Orchestration Documentation

NEW QUESTION # 17

The MuleSoft team at Northern Trail Outfitters wants to create a project skeleton that developers can use as a starting point when creating API implementations with Anypoint Studio. This will help drive consistent use of best practices within the team.

Which type of Anypoint Exchange artifact should be added to Exchange to publish the project skeleton?

- A. A MuleSoft application template with key components
- B. RAML trait definitions to be reused across API implementations
- C. An example of an API implementation following best practices
- D. A custom asset with the default API implementation

Answer: A

Explanation:

To create a project skeleton that developers can use as a starting point for API implementations with Anypoint Studio, the best approach is to use a MuleSoft application template:

MuleSoft Application Template:

A MuleSoft application template includes key components and configurations that follow best practices. It provides a consistent starting point for new projects, ensuring that all developers adhere to the same standards.

Benefits:

Using a template helps enforce best practices, reduces the setup time for new projects, and ensures consistency across different implementations.

Publishing to Anypoint Exchange:

Once the template is created, it can be published to Anypoint Exchange where it is accessible to the entire development team. Developers can then use this template to kickstart their API projects, ensuring a uniform approach across the organization.

Anypoint Exchange Templates Documentation

NEW QUESTION # 18

What is the difference between Run and Debug modes in Flow Builder?

- A. Debug mode uses AI to fix any bugs in the flow.
- B. Run mode uses the latest version of the flow.
- C. Run mode is only available for active flows.
- D. Debug mode displays details for debugging the flow.

Answer: D

Explanation:

In Flow Builder, Run and Debug modes have distinct functionalities:

Run Mode:

Executes the flow as it is, allowing you to see the end-to-end execution based on the latest saved version.

Typically used to verify that the flow works as expected under normal conditions.

Debug Mode:

Provides detailed information for each step of the flow, including input and output data, and any errors encountered.

Useful for troubleshooting and identifying issues within the flow, allowing developers to understand how the flow executes and where problems may arise.

Debug mode is specifically designed to aid in diagnosing and fixing issues by providing a granular view of the flow's execution.
