질문 # 39

Which statement is correct about an MP-BGP route target?

- A. It is used to identify the source and destination VRFs of MP-BGP routes.
- B. The route target is automatically created and must be unique for each VRF.
- C. It is used by BGP to notify other BGP routers that it is EVPN enabled.
- D. The route target is used to identify neighboring BGP routers that support the EVPN family.

정답: A

설명:

Route targets (RTs) are extended BGP communities used in Multiprotocol BGP (MP-BGP) for EVPN- VXLAN to control route import/export between VRFs.

"A route target identifies the VRF instances that should import or export specific MP-BGP routes. It enables the association of EVPN routes with particular VRFs in multi-tenant environments." Option A: Incorrect - EVPN family support is identified through BGP capabilities, not RTs.

Option B: Incorrect - that's handled by BGP EVPN negotiation, not route targets.

Option C: Correct - route targets define which VRFs import/export BGP routes.

Option D: Incorrect - RTs can be manually configured and reused where necessary.
