## 100% Pass Fantastic Salesforce - OmniStudio-Developer Valid Test Tips

Actual4Labs wants to win the trust of Salesforce OmniStudio-Developer exam candidates at any cost. To achieve this objective Actual4Labs is offering some top features with OmniStudio-Developer exam practice questions. These prominent features hold high demand and are specifically designed for quick and complete OmniStudio-Developer Exam Questions preparation.

Salesforce OmniStudio-Developer Certification Exam is an advanced certification exam designed for developers who have a deep understanding of Salesforce's OmniStudio platform. Salesforce Certified OmniStudio Developer certification exam is intended for developers who have experience with the design, development, and deployment of custom applications on the Salesforce platform using OmniStudio. OmniStudio-Developer Exam Tests the candidate's knowledge of the Salesforce platform, including its architecture, data model, security, and customization capabilities.

## Salesforce Certified OmniStudio Developer Sample Questions (Q144-Q149):

### NEW QUESTION # 144

The phone number of a Contact is changed in an OmniScript. What should an OmniStudio Developer configure to update the Contact record in Salesforce?

- A. A Data Mapper Transform that maps the new phone number to the old Phone Number field
- B. A Data Mapper Transform that includes the previous phone number with the upsert key selected and the new phone number
- **C. A Data Mapper Load that includes the RecordId, the upsert key selected, and the new phone number**
- D. A Data Mapper Extract that includes the RecordId, the upsert key selected, and the new phone number

**Answer: C**

Explanation:

Updating Salesforce data from an OmniScript requires a write operation, so the correct tool is a Data Mapper Load. A Data Mapper Extract reads data from Salesforce; it cannot update the Contact record. A Data Mapper Transform only reshapes data between formats and does not perform the Salesforce database update. The Data Mapper Load should include the Contact identifier and the new Phone value so Salesforce can update the correct record. When upsert behavior is needed, the appropriate field mapping must identify the key used to determine whether the record already exists. The question asks specifically about changing a Contact phone number from an OmniScript, so the correct configuration is a Data Mapper Load with the RecordId/key and updated phone value.

#### NEW QUESTION # 145

What parent JSON node name must be sent to a Calculation Procedure?

- A. Input
- B. input
- C. Inputs
- D. inputs

**Answer: D**

#### NEW QUESTION # 146

A developer creates an Integration Procedure with a Set values and a DataRaptor Extract Action that requires AccountId as a key. When the developer previews the Integration Procedure, the developer enters the AccountId correctly and executes the preview. The developer sees the data extracted by the DataRaptor in the Debug Log, but the response is empty. What is the likely cause of this issue?

- A. The AccountId used for the preview is invalid.
- B. The DataRaptor Action did not have the Add Response To Response JSON property set to true.
- C. The Response cannot be previewed directly.
- D. A Response Action was not added to the Integration Procedure.

**Answer: D**

#### NEW QUESTION # 147

What is best practice for ensuring that the OmniScript data collected from the user is properly secured before being stored or used in subsequent actions?

- A. Use Data Mapper Load for saving, as it respects Salesforce Platform security.
- B. Rely on the OmniScript framework to manage data security automatically.
- C. Store sensitive data in Session Variables.
- D. Ensure all sensitive data fields have validation rules.

**Answer: A**

Explanation:

The correct answer is D, but with one serious qualification: the Data Mapper must be configured with the proper security controls. Data Mapper Load is the OmniStudio component used to write JSON, XML, or custom input data to Salesforce objects. For secure storage, the save operation should rely on Salesforce object access, field-level security, sharing, and OmniStudio security settings rather than storing sensitive values in temporary session variables or assuming the UI framework handles everything automatically.

Validation rules help data quality, not full access control. Session Variables are not the correct place to persist sensitive business data. Therefore, Data Mapper Load is the correct saving mechanism, supported by Salesforce security configuration.

#### NEW QUESTION # 148

In a calculation procedure, what is required for the output of a calculation step to be used in an aggregation step?

- A. It must be included in the calculation output.

- B. It must be a calculation step.
- C. It must be a matrix lookup step.
- D. It must be included in constants.

**Answer: A**

## NEW QUESTION # 149

.....

The simplified information contained in our OmniStudio-Developer training guide is easy to understand without any difficulties. And our OmniStudio-Developer practice materials enjoy a high reputation considered as the most topping practice materials in this career for the merit of high-effective. A great number of candidates have already been benefited from them. So what are you waiting for? Come to have a try on our OmniStudio-Developer Study Materials and gain your success!
