Free 101-500 Brain Dumps & Latest 101-500 Test Labs

If you do not have extraordinary wisdom, do not want to spend too much time on learning, but want to reach the pinnacle of life through 101-500 exam, then you must have 101-500 question torrent. The goal of 101-500 exam torrent is to help users pass the exam with the shortest possible time and effort. With 101-500 Exam Torrent, you neither need to keep yourself locked up in the library for a long time nor give up a rare vacation to review. You will never be frustrated by the fact that you can't solve a problem.

The LPIC-1 Exam 101, Part 1 of 2, version 5.0 certification exam is a two-hour test that consists of 60 multiple-choice and fill-in-the-blank questions. 101-500 Exam is available in English, Japanese, German, Portuguese, and Spanish. To pass the exam, candidates must score at least 500 out of 800 points. Once certified, candidates can demonstrate their proficiency in Linux system administration, which can help them advance their careers and increase their earning potential.

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q64-Q69):

NEW QUESTION # 64

Which of the following shell redirections will write standard output and standard error output to a file named filename?

- A. 1>&2>filename
- **B. >filename 2>&1**
- C. >>filename
- D. 1&2>filename
- E. 2>&1 >filename

Answer: B

Explanation:

The shell redirection that will write standard output and standard error output to a file named filename is

>filename 2>&1. This command uses the following syntax:

* filename: Redirects standard output (file descriptor 1) to a file named filename. If the file does not exist, it will be created. If the file exists, it will be overwritten.

* 2>&1: Redirects standard error (file descriptor 2) to the same destination as standard output. The & symbol indicates that the following number is a file descriptor, not a filename.

The order of the redirections is important, as they are processed from left to right. If the order was reversed, as in 2>&1 >filename, the command would not work as expected, because it would first redirect standard error to the current standard output (which is the terminal by default), and then redirect standard output to the file, leaving standard error unchanged.

The other commands are incorrect for the following reasons:

* A. 2>&1 >filename: This command will redirect standard error to the current standard output, and then redirect standard output to the file, leaving standard error unchanged.

* C. 1>&2>filename: This command will redirect standard output to the current standard error, and then redirect standard error to the file, leaving standard output unchanged.

* D. >>filename: This command will only redirect standard output to the file in append mode, without affecting standard error.

* E. 1&2>filename: This command is not valid, as it is missing the > symbol before the first file descriptor, and it will produce an error message.

NEW QUESTION # 65

Which chown command changes the ownership to dave and the group to staff on a file named data.txt?

chown dave/staff data.txt

- A. chown dave:staff data.txt
- **B.**
- C. chown -u dave -g staff data.txt
- D. chown dave+staff data.txt
- E. chown --user dave --group staff data.txt

Answer: B

NEW QUESTION # 66

Which of the following is a limitation of the cut command?

- A. The cut command can only select output by field position.
- B. The cut command will always print one line of output for every line of input.
- C. The cut command only works on ASCII text.
- **D. The cut command cannot reorder fields.**

Answer: D

NEW QUESTION # 67

Which of the following statements are correct when comparing Linux containers with traditional virtual machines (e.g. LXC vs. KVM)? (Choose three.)

- A. Containers on the same host can use different operating systems, as the container hypervisor creates separate kernel execution.
- **B. The guest environment for fully virtualized machines is created by a hypervisor which provides virtual and emulated hardware devices.**
- C. Containers are completely decoupled from the host system's physical hardware and can only use emulated virtual hardware devices.
- **D. Containers are a lightweight virtualization method where the kernel controls process isolation and resource management.**
- **E. Fully virtualized machines can run any operating system for a specific hardware architecture within the virtual machine.**

Answer: B,D,E
