If you are worried about your C-S4CPB-2502 practice test and you have no much time to prepare, now you can completely rest assured it because we will offer you the most updated C-S4CPB-2502 dumps pdf with 100% correct answers. You can save your time and money by enjoying one-year free update after purchasing our C-S4CPB-2502 Dumps PDF. We also provide the free demo for your reference.

## SAP C-S4CPB-2502 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of SAP Cloud ERP Consultant and focuses on setting up system configurations in SAP Cloud ERP and understanding how to manage user navigation and interface personalization through the SAP Fiori Launchpad. It tests the consultant's ability to configure and align user experience with business roles. |

| Topic 2 | • Data Migration and Business Process Testing: This section of the exam measures skills of SAP Cloud ERP Consultant and evaluates the ability to plan and execute data migration strategies and validate business processes through structured testing. Candidates are expected to be familiar with tools and methods for importing legacy data and confirming its integrity post-migration. |
|---|---|
| Topic 3 | • Introduction to Cloud Computing and SAP Cloud ERP Basics: This section of the exam measures skills of ERP Implementation Project Manager and assesses foundational knowledge of cloud computing principles and SAP Cloud ERP structure. It ensures understanding of key differences from on-premise ERP, cloud deployment benefits, and basic navigation of cloud ERP systems. |
| Topic 4 | • Extensibility and Integration: This section of the exam measures skills of SAP Cloud ERP Consultant and deals with the capabilities of extending SAP applications to meet custom business requirements and integrating with other systems or services. The focus is on knowing when to extend standard functionality and how to ensure smooth system integration in a cloud context. |

# Trustable SAP Valid C-S4CPB-2502 Exam Cram and the Best Accurate PDF C-S4CPB-2502 Download

Users who use our C-S4CPB-2502 real questions already have an advantage over those who don't prepare for the exam. Our study materials can let users the most closed to the actual test environment simulation training, let the user valuable practice effectively on C-S4CPB-2502 practice guide, thus through the day-to-day practice, for users to develop the confidence to pass the exam. For examination, the power is part of pass the exam but also need the candidate has a strong heart to bear ability, so our C-S4CPB-2502 learning guide materials through continuous simulation testing to help you pass the C-S4CPB-2502 exam.

# SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q34-Q39):

## NEW QUESTION # 34
Which technologies should you use to integrate SAP S/4HANA Cloud Public Edition with another SAP public cloud solution? Note: There are 2 correct answers to this question

- A. Predelivered APIs
- B. SAP Process Orchestration
- C. SAP Integration Suite
- D. SAP Cloud Connector

**Answer: A,C**

## NEW QUESTION # 35
Which of the following systems are used to implement SAP S/4HANA Cloud Public Edition for a customer?
Note: There are 3 correct answers to this question.

- A. Starter system
- B. Sandbox system
- C. Development system
- D. Trial system
- E. Test system

**Answer: A,B,E**

Explanation:
* Sandbox system: This is an optional system that can be used to explore the SAP S/4HANA Cloud Public Edition capabilities and features before the implementation project starts. It is not connected to the starter system or the test system and does not have any data migration or configuration tools. It can be refreshed on demand by the customer1.

* Starter system: This is the first system that is provisioned for the customer after the contract is signed.
It is used to perform the fit-to-standard workshops, where the customer validates the standard processes and identifies the gaps and requirements. It also serves as the configuration system, where the customer configures the business processes using the SAP Central Business Configuration tool. The starter system is connected to the test system and can transfer the configuration and master data to it2.
* Test system: This is the second system that is provisioned for the customer after the starter system is configured. It is used to perform the integration testing, user acceptance testing, data migration, and cutover activities. It also serves as the production system, where the customer runs the live business processes after the go-live. The test system is connected to the starter system and can receive the configuration and master data from it3.
The systems that are not used to implement SAP S/4HANA Cloud Public Edition for a customer are:
* Trial system: This is a system that can be used to experience the SAP S/4HANA Cloud Public Edition solution for a limited time. It is not connected to any other system and does not have any data migration or configuration tools. It is not part of the implementation project and does not require a contract4.
* Development system: This is a system that can be used to develop custom applications or extensions using the SAP Business Technology Platform. It is not part of the SAP S/4HANA Cloud Public Edition landscape and does not have any data migration or configuration tools. It requires a separate contract and license.

## NEW QUESTION # 36
Which of the following actions does the lead configuration expert carry out during the content deployment phase in the SAP S/4HANA Cloud starter system? Note: There are 3 correct answers to this question.

- A. Create two projects
- B. Confirm primary logistics settings
- C. Define the scope
- D. Confirm primary finance settings
- E. Confirm primary HCM settings

**Answer: A,C,D**

## NEW QUESTION # 37
What are some characteristics of the SAP S/4HANA Migration Cockpit? Note: There are 2 correct answers to this question.

- A. Mapping source values to SAP S/4HANA target values
- B. Extensibility using the Legacy System Migration Workbench
- C. Guidance and simulation of the migration process
- D. Combining the local and remote schema approaches into one migration project

**Answer: A,C**

Explanation:
The SAP S/4HANA Migration Cockpit is a tool that facilitates the transfer of business data from a source system to SAP S/4HANA. It uses migration objects to identify and transfer the relevant data for a specific business object. The SAP S/4HANA Migration Cockpit has the following characteristics1:
* It allows mapping source values to SAP S/4HANA target values, as well as converting values that are migrated from source fields to target fields. This ensures data consistency and quality in the target system.
* It provides guidance and simulation of the migration process, as well as error handling and monitoring.
This helps to reduce the complexity and risk of data migration, and to ensure a smooth and successful data transfer.
* It does not support extensibility using the Legacy System Migration Workbench (LSMW), which is a tool for data migration from legacy systems to SAP systems. The SAP S/4HANA Migration Cockpit has its own extensibility framework, the SAP S/4HANA Migration Object Modeler, which allows creating and enhancing migration objects2.
* It does not combine the local and remote schema approaches into one migration project. The SAP S
/4HANA Migration Cockpit offers three options for transferring data to SAP S/4HANA: using files, using staging tables, or using direct transfer from an SAP system1. Each option requires a separate migration project and has its own advantages and limitations3.

**NEW QUESTION # 38**

In SAP Central Business Configuration, which activities can you perform in the Product-Specific Configuration Phase? Note: There are 3 correct answers to this question.

- A. Change approval thresholds.
- B. Add new sales organizations.
- C. Modify building blocks.
- D. Create new scope items.
- E. Add blocking reasons for billing.

**Answer: A,B,E**

Explanation:
In the Product-Specific Configuration Phase within SAP Central Business Configuration, several key activities can be performed to tailor the SAP S/4HANA Cloud system to meet specific business needs:
* Add new sales organizations: This activity involves setting up new sales organizations within the system, defining the structure of the sales department, and aligning it with the company's sales strategies and territories. This setup is crucial for managing sales processes, customer relationships, and sales reporting.
* Change approval thresholds: Modifying approval thresholds is an essential configuration activity that adjusts the approval limits for various transactions, ensuring that the approval process aligns with the company's internal control and governance policies. This can involve setting different thresholds for purchase orders, expense approvals, and other financial transactions.
* Add blocking reasons for billing: This configuration activity allows the company to define specific reasons for blocking billing documents, ensuring that billing does not proceed under certain conditions until the issues are resolved. This is critical for maintaining accurate and compliant billing processes.
These activities are part of the detailed configuration work that tailors the SAP S/4HANA Cloud system to the specific operational needs of the business, ensuring that the software supports the company's unique processes and policies.

**NEW QUESTION # 39**
......

The learning material is open in three excellent formats; SAP C-S4CPB-2502 dumps PDF, a desktop SAP C-S4CPB-2502 dumps practice test, and a web-based SAP C-S4CPB-2502 dumps practice test.
