Our Professional-Cloud-Database-Engineer guide torrent will be the best choice for you to save your time. Because our products are designed by a lot of experts and professors in different area, our Professional-Cloud-Database-Engineer exam questions can promise twenty to thirty hours for preparing for the exam. If you decide to buy our Professional-Cloud-Database-Engineer test guide, which means you just need to spend twenty to thirty hours before you take your exam. By our Professional-Cloud-Database-Engineer Exam Questions, you will spend less time on preparing for exam, which means you will have more spare time to do other thing. So do not hesitate and buy our Professional-Cloud-Database-Engineer guide torrent.

Our website is considered to be the most professional platform offering Professional-Cloud-Database-Engineer practice materials, and gives you the best knowledge of the Professional-Cloud-Database-Engineer practice materials. Passing the exam has never been so efficient or easy when getting help from our Google Cloud Certified - Professional Cloud Database Engineer practice materials. There are also free demos you can download before placing the orders. Taking full advantage of our Google Cloud Certified - Professional Cloud Database Engineer practice materials and getting to know more about them means higher possibility of winning. And our website is a bountiful treasure you cannot miss.

Latest updated Professional-Cloud-Database-Engineer Advanced Testing Engine & Latest Professional-Cloud-Database-Engineer Exam Vce Free & Useful Professional-Cloud-Database-Engineer Clearer Explanation

Our company attaches great importance on improving the Professional-Cloud-Database-Engineer study prep. In addition, we clearly know that constant improvement is of great significance to the survival of a company. The fierce competition in the market among the same industry has long existed. As for our Professional-Cloud-Database-Engineer exam braindump, our company masters the core technology, owns the independent intellectual property rights and strong market competitiveness. What is more, we have never satisfied our current accomplishments. The highest record is up to five seconds. There has no delay time of the grading process. Slow system response doesn't exist. In addition, the calculation system of the Professional-Cloud-Database-Engineer Test Question is very powerful and stable. We promise that the results of your exercises are accurate.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q140-Q145):

NEW QUESTION # 140

You are the DBA of an online tutoring application that runs on a Cloud SQL for PostgreSQL database. You are testing the implementation of the cross-regional failover configuration. The database in region R1 fails over successfully to region R2, and the database becomes available for the application to process data. During testing, certain scenarios of the application work as expected in region R2, but a few scenarios fail with database errors. The application-related database queries, when executed in isolation from Cloud SQL for PostgreSQL in region R2, work as expected. The application performs completely as expected when the database fails back to region R1. You need to identify the cause of the database errors in region R2. What should you do?

- A. Determine whether Cloud SQL for PostgreSQL in region R2 is a near-real-time copy of region R1 but not an exact copy.
- B. Determine whether the failover of Cloud SQL for PostgreSQL from region R1 to region R2 is in progress or has completed successfully.
- C. Determine whether the database patches of Cloud SQL for PostgreSQL in regions R1 and R2 are different.
- D. Determine whether the versions of Cloud SQL for PostgreSQL in regions R1 and R2 are different.

Answer: C

NEW QUESTION # 141

Your online delivery business that primarily serves retail customers uses Cloud SQL for MySQL for its inventory and scheduling application. The required recovery time objective (RTO) and recovery point objective (RPO) must be in minutes rather than hours as a part of your high availability and disaster recovery design. You need a high availability configuration that can recover without data loss during a zonal or a regional failure. What should you do?

- A. Set up all read replicas in the same region as the primary instance with synchronous replication.
- B. Set up read replicas in different zones of the same region as the primary instance with asynchronous replication, and set up read replicas in different regions with synchronous replication.
- C. Set up all read replicas in a different region using asynchronous replication.
- D. Set up read replicas in different zones of the same region as the primary instance with synchronous replication, and set up read replicas in different regions with asynchronous replication.

Answer: D

Explanation:

This answer meets the RTO and RPO requirements by using synchronous replication within the same region, which ensures that all writes made to the primary instance are replicated to disks in both zones before a transaction is reported as committed¹. This minimizes data loss and downtime in case of a zonal or an instance failure, and allows for a quick failover to the standby instance¹. This answer also meets the high availability and disaster recovery requirements by using asynchronous replication across different regions, which ensures that the data changes made to the primary instance are replicated to the read replicas in other regions with minimal delay². This provides additional redundancy and backup in case of a regional failure, and allows for a manual failover to the read replica in another region².

NEW QUESTION # 142

You are designing an augmented reality game for iOS and Android devices. You plan to use Cloud Spanner as the primary backend database for game state storage and player authentication. You want to track in-game rewards that players unlock at every stage of the game. During the testing phase, you discovered that costs are much higher than anticipated, but the query response times are within the SLA. You want to follow Google-recommended practices. You need the database to be performant and highly available while you keep costs low. What should you do?

- A. Manually scale down the number of nodes after the peak period has passed.
- B. Use interleaving to co-locate parent and child rows.
- **C. Use granular instance sizing in Cloud Spanner and Autoscaler.**
- D. Use the Cloud Spanner query optimizer to determine the most efficient way to execute the SQL query.

Answer: C

Explanation:

Granular instance is available in Public Preview. With this feature, you can run workloads on Spanner at as low as 1/10th the cost of regular instances, <https://cloud.google.com/blog/products/databases/get-more-out-of-spanner-with-granular-instance-sizing>

NEW QUESTION # 143

You are managing a mission-critical Cloud SQL for PostgreSQL instance. Your application team is running important transactions on the database when another DBA starts an on-demand backup. You want to verify the status of the backup. What should you do?

- A. Use the Google Cloud Console.
- B. Perform the `gcloud sql operations list` command.
- **C. Use Cloud Audit Logs to verify the status.**
- D. Check the `cloudsql.googleapis.com/postgres.log` instance log.

Answer: C

NEW QUESTION # 144

You are managing a mission-critical Cloud SQL for PostgreSQL instance. Your application team is running important transactions on the database when another DBA starts an on-demand backup. You want to verify the status of the backup. What should you do?

- A. Use the Google Cloud Console.
- B. Use Cloud Audit Logs to verify the status.
- **C. Perform the `gcloud sql operations list` command.**
- D. Check the `cloudsql.googleapis.com/postgres.log` instance log.

Answer: C

Explanation:

<https://cloud.google.com/sql/docs/postgres/backup-recovery/backups#troubleshooting-backups> Under Troubleshooting: Issue: "You can't see the current operation's status." The Google Cloud console reports only success or failure when the operation is done. It isn't designed to show warnings or other updates. Run the `gcloud sql operations list` command to list all operations for the given Cloud SQL instance.

NEW QUESTION # 145

.....

Our Google Cloud Certified - Professional Cloud Database Engineer exam questions are curated and crafted by experts. We have put in a lot of efforts to create amazing guides for our customers. Passing Professional-Cloud-Database-Engineer can be hard, and you won't find such exam Professional-Cloud-Database-Engineer Brain Dumps anywhere. With Professional-Cloud-Database-Engineer sample questions exam dumps, you can secure high marks in the Professional-Cloud-Database-Engineer. We provide 100% money back guarantee on exam Professional-Cloud-Database-Engineer practice exam products.
