Unparalleled Web-Development-Applications Training Quiz: WGU Web Development Applications Carry You Outstanding Exam Dumps - Exam4Docs

Exam4Docs provides WGU Web-Development-Applications desktop-based practice software for you to test your knowledge and abilities. The Web-Development-Applications desktop-based practice software has an easy-to-use interface. You will become accustomed to and familiar with the free demo for WGU Web-Development-Applications Exam Questions. Exam self-evaluation techniques in our Web-Development-Applications desktop-based software include randomized questions and timed tests. These tools assist you in assessing your ability and identifying areas for improvement to pass the WGU certification exam.

WGU Web Development Applications Sample Questions (Q66-Q71):

NEW QUESTION # 66

A web page has the following CSS code:

Which selector should a developer use to invoke the CSS?

- A. Style
- **B. id**
- C. Attribute
- D. class

Answer: B

Explanation:

To invoke the CSS provided, an ID selector is used. In CSS, the ID selector is used to style the element with the specific id attribute.

* CSS ID Selector: The syntax for the ID selector is #id, where id is the id attribute value of the HTML element.

* Usage Example:

```
#black {  
color: black;  
}
```

This CSS rule will apply the color: black; style to the element with id="black".

* Example in HTML:

```
<div id="black">This text will be black.</div>
```

W3C CSS Specification on Selectors

NEW QUESTION # 67

```
.option01 {  
text-align: right;  
color: red;  
}
```

Which HTML markup should a developer use to invoke the option01 selector in a paragraph?

- **A. <p class="option01">Red color text</p>**
- B. <p class=.option01>Red color text</p>
- C. <p id=.option01>Red color text</p>
- D. <p id="option01">Red color text</p>

Answer: A

Explanation:

Since the CSS rule uses a class selector .option01, the correct way to apply it in HTML is by setting the class attribute on the element.

Correct HTML:

```
<p class="option01">Red color text</p>
```

"To apply a class selector, add class="classname" to the HTML element. This connects it to CSS rules written with .<classname>."

Here are the properly formatted and verified responses to your Questions 16-18 using the format you requested.

NEW QUESTION # 68

What allows a scripting language to manipulate elements on a web page?

- A. CSS
- B. XML
- C. HTML
- **D. DOM**

Answer: D

Explanation:

The Document Object Model (DOM) is an API for HTML and XML documents that defines the logical structure of documents and the way a document is accessed and manipulated.

* DOM Explanation:

* The DOM represents the page so that programs can change the document structure, style, and content.

* It provides a way for scripts to update the content, structure, and style of a document while it is being viewed.

* Explanation:

* Option A: CSS is incorrect because it is used for styling web pages.

* Option B: XML is incorrect because it is a markup language, not an API for manipulating web page elements.

* Option C: HTML is incorrect because it is the markup language used to create web pages, not an API for manipulation.

* Option D: DOM is correct because it allows a scripting language to manipulate elements on a web page.

:

MDN Web Docs - DOM

W3Schools - JavaScript HTML DOM

NEW QUESTION # 69

Given the following CSS code:

Which portion is the rule?

- **A.**
- B.
- C.
- D.

Answer: A

Explanation:

In CSS, a rule is composed of a selector and a declaration block. The rule is the entire part that defines how styles should be applied to elements matching the selector.

* CSS Rule Components:

* Selector: Identifies the HTML elements to be styled (e.g., `body`, `.name`, `#item`).

* Declaration Block: Contains one or more declarations, each consisting of a property and a value, enclosed in curly braces `{}`.

* Example Analysis:

* Option A:

```
body {  
background-color: white;  
}
```

This is the full rule, consisting of the selector `body` and the declaration block `{ background-color: white; }`.

* Option B:

```
background-color: white;
```

This is just a declaration, not a complete rule.

```
background-color: white,
```

This is an incorrect declaration due to the comma, and not a complete rule.

* Option D:

color: black

This is just a declaration, not a complete rule.

NEW QUESTION # 70

Which code segment contains a conditional expression?

- A. `\`var result = aCount * 1000 == 3000000;\``
- B. `\`var result = count++ > 10;\``
- C. `\`var result = count > 10 ? "Done" : getResult();\``
- D. `\`var result = dataCount;\``

Answer: C

Explanation:

> "The conditional (ternary) operator `'?:'` is a shortcut for an `'if...else'` statement. It is the only operator in JavaScript that takes three operands: a condition followed by a question mark (`?`), an expression to execute if the condition is true, and another expression if false." Example:

```
```\`javascript
var result = condition ? value1 : value2;
```\`
```

References:

* MDN Web Docs: Conditional (ternary) operator

* ECMAScript Specification: ConditionalExpression

NEW QUESTION # 71
