QUESTION 1

A company has multiple business units. Each business unit has its own AWS account and runs a single website within that account. The company also has a single logging account. Logs from each business unit website are aggregated into a single Amazon S3 bucket in the logging account. The S3 bucket policy provides each business unit with access to write data into the bucket and requires data to be encrypted.

The company needs to encrypt logs uploaded into the bucket using a Single AWS Key Management Service (AWS KMS) CMK. The CMK that protects the data must be rotated once every 365 days. Which strategy is the MOST operationally efficient for the company to use to meet these requirements?

A. Create a customer managed CMK in the logging account. Update the CMK key policy to provide access to the logging account only. Manually rotate the CMK every 365 days.

B. Create a customer managed CMK in the logging account. Update the CMK key policy to provide access to the logging account and business unit accounts. Enable automatic rotation of the CMK.

C. Use an AWS managed CMK in the logging account. Update the CMK key policy to provide access to the logging account and business unit accounts. Manually rotate the CMK every 365 days.

D. Use an AWS managed CMK in the logging account. Update the CMK key policy to provide access to the logging account only. Enable automatic rotation of the CMK.

Correct Answer: A

QUESTION 2

A company provides a software as a service (SaaS) application that runs in the AWS Cloud. The application runs on Amazon EC2 instances behind a Network Load Balancer (NLB). The instances are in an Auto Scaling group and are distributed across three Availability Zones in a single AWS Region.

The company is deploying the application into additional Regions. The company must provide static IP addresses for the application to customers so that the customers can add the IP addresses to allow lists.

The solution must automatically route customers to the Region that is geographically closest to them.

Which solution will meet these requirements?

A. Create an Amazon CloudFront distribution. Create a CloudFront origin group. Add the NLB for each additional Region to the origin group. Provide customers with the IP address ranges of the distribution's edge locations.

B. Create an AWS Global Accelerator standard accelerator. Create a standard accelerator endpoint for the NLB in each additional Region. Provide customers with the Global Accelerator IP address.

C. Create an Amazon CloudFront distribution. Create a custom origin for the NLB in each additional Region. Provide customers with the IP address ranges of the distribution's edge locations.

D. Create an AWS Global Accelerator custom routing accelerator. Create a listener for the custom routing accelerator. Add the IP address and ports for the NLB in each additional Region. Provide customers with the Global Accelerator IP address.

Correct Answer: B

The latest SAP-C02 latest questions will be sent to you email, so please check then, and just feel free to contact with us if you have any problem. Our reliable SAP-C02 exam material will help pass the exam smoothly. With our numerous advantages of our SAP-C02 latest questions and service, what are you hesitating for? Our company always serves our clients with professional and precise attitudes, and we know that your satisfaction is the most important thing for us. We always aim to help you pass the SAP-C02 Exam smoothly and sincerely hope that all of our candidates can enjoy the tremendous benefit of our SAP-C02 exam material, which might lead you to a better future!

As everybody knows, the most crucial matter is the quality of AWS Certified Solutions Architect - Professional (SAP-C02) study question for learners. We have been doing this professional thing for many years. Let the professionals handle professional issues. So as for us, we have enough confidence to provide you with the best SAP-C02 exam questions for your study to pass it. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the Latest SAP-C02 Test Guide. You don't worry about that how to keep up with the market trend, just follow us. In addition to the industry trends, the SAP-C02 test guide is written by lots of past materials' rigorous analyses. Only with strict study, we write the latest and the specialized study materials. We can say that our SAP-C02 exam questions are the most suitable for examinee to pass the exam.

>> 100% SAP-C02 Correct Answers <<<

Latest SAP-C02 Braindumps Files | SAP-C02 Reliable Study Notes

To fit in this amazing and highly accepted exam, you must prepare for it with high-rank practice materials like our SAP-C02 study materials. They are the Best choice in terms of time and money. All contents of SAP-C02 training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our SAP-C02 Quiz guide.

Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample Questions (Q435-Q440):

NEW QUESTION # 435

A company is developing a new on-demand video application that is based on microservices. The application will have 5 million users at launch and will have 30 million users after 6 months. The company has deployed the application on Amazon Elastic Container Service (Amazon ECS) on AWS Fargate. The company developed the application by using ECS services that use the HTTPS protocol.

A solutions architect needs to implement updates to the application by using blue/green deployments. The solution must distribute traffic to each ECS service through a load balancer. The application must automatically adjust the number of tasks in response to an Amazon CloudWatch alarm.

Which solution will meet these requirements?

- A. Configure the ECS services to use the blue/green deployment type and a Network Load Balancer. Request increases to the service quota for tasks per service to meet the demand.
- **B. Configure the ECS services to use the blue/green deployment type and an Application Load Balancer. Implement an Auto Scaling group for each ECS service by using the Cluster Autoscaler.**
- C. Configure the ECS services to use the blue/green deployment type and a Network Load Balancer. Implement an Auto Scaling group for each ECS service by using the Cluster Autoscaler.
- D. Configure the ECS services to use the blue/green deployment type and an Application Load Balancer. Implement Service Auto Scaling for each ECS service.

Answer: B

Explanation:

<https://repost.aws/knowledge-center/ecs-fargate-service-auto-scaling>

NEW QUESTION # 436

A company that designs multiplayer online games wants to expand its user base outside of Europe. The company transfers a significant amount of UDP traffic to Keep all the live and interactive sessions of the games. The company has plans for rapid expansion and wants to build its architecture to provide an optimized online experience to its users. Which architecture will meet these requirements with the LOWEST latency for users?

- **A. Set up environments in multiple AWS Regions. Create an accelerator in AWS Global Accelerator, and add endpoints from different Regions to it.**
- B. Set up environments in multiple AWS Regions. Use Amazon Route 53, and select latency-based routing.
- C. Set up a Multi-AZ environment in a single AWS Region. Use Amazon CloudFront to cache user sessions.
- D. Set up a Multi-AZ environment in a single AWS Region. Use AWS Lambda@Edge to update sessions closer to the users.

Answer: A

NEW QUESTION # 437

A company is deploying a third-party firewall appliance solution from AWS Marketplace to monitor and protect traffic that leaves the company's AWS environments. The company wants to deploy this appliance into a shared services VPC and route all outbound internet-bound traffic through the appliances.

A solutions architect needs to recommend a deployment method that prioritizes reliability and minimizes failover time between firewall appliances within a single AWS Region. The company has set up routing from the shared services VPC to other VPCs. Which steps should the solutions architect recommend to meet these requirements? (Select THREE.)

- A. Create a VPC interface endpoint. Add a route to the route table in the shared services VPC. Designate the new endpoint

as the next hop for traffic that enters the shared services VPC from other VPCs.

- B. Deploy two firewall appliances into the shared services VPC, each in the same Availability Zone.
- C. Create a VPC Gateway Load Balancer endpoint. Add a route to the route table in the shared services VPC. Designate the new endpoint as the next hop for traffic that enters the shared services VPC from other VPCs.
- D. Deploy two firewall appliances into the shared services VPC, each in a separate Availability Zone.
- E. Create a new Network Load Balancer in the shared services VPC. Create a new target group, and attach it to the new Network Load Balancer. Add each of the firewall appliance instances to the target group.
- F. Create a new Gateway Load Balancer in the shared services VPC. Create a new target group, and attach it to the new Gateway Load Balancer. Add each of the firewall appliance instances to the target group.

Answer: C,D,F

Explanation:

Explanation

The best solution is to deploy two firewall appliances into the shared services VPC, each in a separate Availability Zone, and create a new Gateway Load Balancer to distribute traffic to them. A Gateway Load Balancer is designed for high performance and high availability scenarios with third-party network virtual appliances, such as firewalls. It operates at the network layer and maintains flow stickiness and symmetry to a specific appliance instance. It also uses the GENEVE protocol to encapsulate traffic between the load balancer and the appliances. To route traffic from other VPCs to the Gateway Load Balancer, a VPC Gateway Load Balancer endpoint is needed. This is a VPC endpoint that provides private connectivity between the appliances in the shared services VPC and the application servers in other VPCs. The endpoint must be added as the next hop in the route table for the shared services VPC. This solution ensures reliability and minimizes failover time between firewall appliances within a single AWS Region.

NEW QUESTION # 438

A company runs a serverless application in a single AWS Region. The application accesses external URLs and extracts metadata from those sites. The company uses an Amazon Simple Notification Service (Amazon SNS) topic to publish URLs to an Amazon Simple Queue Service (Amazon SQS) queue. An AWS Lambda function uses the queue as an event source and processes the URLs from the queue. Results are saved to an Amazon S3 bucket.

The company wants to process each URL in other Regions to compare possible differences in site localization. URLs must be published from the existing Region. Results must be written to the existing S3 bucket in the current Region.

Which combination of changes will produce multi-Region deployment that meets these requirements? (Select TWO.)

- A. Deploy the SNS topic and the Lambda function to other Regions.
- B. Subscribe the SQS queue in each Region to the SNS topics in each Region.
- C. Deploy the SQS queue with the Lambda function to other Regions.
- D. Subscribe the SNS topic in each Region to the SQS queue.
- E. Configure the SQS queue to publish URLs to SNS topics in each Region.

Answer: B,E

NEW QUESTION # 439

A company is launching a web-based application in multiple regions around the world. The application consists of both static content stored in a private Amazon S3 bucket and dynamic ECS containers behind an Application Load Balancer (ALB). The company requires that the static and dynamic application content be accessible through Amazon CloudFront only. Which combination of steps should a solutions architect recommend to restrict direct content access to CloudFront? (Select THREE.)

- A. Configure CloudFront to add a custom header to origin requests.
- B. Create a CloudFront Origin Access Identity (OAI) and add it to the CloudFront distribution. Update the S3 bucket policy to allow access to the OAI only.
- C. Create a web ACL in AWS WAF with a rule to validate the presence of a custom header and associate the web ACL with the CloudFront distribution.
- D. Create a web ACL in AWS WAF with a rule to validate the presence of a custom header and associate the web ACL with the ALB.
- E. Configure the ALB to add a custom header to HTTP requests.
- F. Update the S3 bucket ACL to allow access from the CloudFront distribution only.

Answer: A,B,D

NEW QUESTION # 440

.....

In today's technological world, more and more students are taking the AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) exam online. While this can be a convenient way to take a AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) exam dumps, it can also be stressful. Luckily, Pass4sures's best Amazon SAP-C02 exam questions can help you prepare for your Amazon SAP-C02 Certification Exam and reduce your stress. If you are preparing for the AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) exam dumps our SAP-C02 Questions help you to get high scores in your AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) exam.
