Exam C-SEC-2405 Study Guide | Test C-SEC-2405 Cram Pdf

But with proper planning, firm commitment, and complete C-SEC-2405 exam preparation will enable you to make this SAP C-SEC-2405 easiest. Are you ready to accept this challenge? Looking for a simple, smart, and quick way of completing SAP C-SEC-2405 Exam Preparation? If your answer is yes then you must try VCEDumps C-SEC-2405 Questions.

SAP C-SEC-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.
Topic 2	• Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.

Topic 3	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
Topic 4	• Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
Topic 5	• Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.

SAP Certified Associate - Security Administrator Sample Questions (Q54-Q59):

NEW QUESTION # 54

Your developer has created a new custom transaction for your SAP S/4HANA on-premise system and has provided you a list of the authorizations needed to execute the new ABAP program."What must you do to ensure that each required authorization is automatically created every time this new custom transaction is added to a PFCG role?

- A. Maintain each authorization object in transaction SU22 and set the Default Status to "Yes".
- B. Maintain each authorization object in transaction SU24 and set the Default Status to "Yes".
- C. Maintain each authorization in transaction SU24 and set the Default Status to "Yes".
- D. Maintain each authorization in transaction SU22 and set the Check Indicator value to "Check".

Answer: B

Explanation:
* Context:Transaction SU24 is used to maintain the link between transactions and authorization objects, ensuring automated role generation.
* Solution Explanation:
* By setting theDefault Status to "Yes"in SU24, the system automatically includes required authorizations when the custom transaction is added to a role in PFCG.
SAP Security References:
* SAP SU24 Maintenance Guide
* SAP Custom Transaction Authorization Guidelines

NEW QUESTION # 55

When planning an authorization concept for your SAP S/4HANA Cloud Public Edition implementation, what rules must you consider? Note: There are 2 correct answers to this question.

- A. Business catalogs can be assigned directly to a business role.
- B. SAP Fiori apps, dashboards, and displays can be assigned directly to a business role.
- C. Business roles can be assigned directly to a business user.
- D. Business catalogs can be assigned directly to a business user.

Answer: A,C

NEW QUESTION # 56

How does Rapid Activation support customers during the SAP S/4HANA on-premise implementation process? Note: There are 3 correct answers to this question.

- A. By reducing the SAP Fiori activation effort during the Explore phase of SAP Activate.
- B. By helping customers to start exploring SAP Fiori in SAP S/4HANA on premises as quickly as possible.
- C. By allowing customers to select and activate SAP Fiori apps one by one, independent of dependencies needed for app-

to-app navigation.
- **D. By supporting content activation at the business role level, including SAP Fiori apps and all associated Web Dynpro for ABAP applications.**
- E. By allowing customers to select individual SAP Fiori apps for their end-to-end business processes.

Answer: A,B,D

Explanation:
Rapid Activation in SAP S/4HANA on-premise streamlines the implementation process by reducing the SAP Fiori activation effort during the Explore phase of SAP Activate, enabling faster setup and testing of Fiori apps. It supports content activation at the business role level, automatically activating SAP Fiori apps and associated Web Dynpro for ABAP applications linked to a role, ensuring a cohesive user experience without manual configuration. Additionally, Rapid Activation helps customers start exploring SAP Fiori quickly, providing preconfigured content that accelerates the transition to the Fiori interface. However, it does not allow selecting and activating Fiori apps individually without considering dependencies (option D), as apps often require related services for navigation. Similarly, while it supports business processes, it does not focus on selecting individual apps for end-to-end processes (option E), as activation is role-based. These features make Rapid Activation a valuable tool for efficient Fiori deployment, enhancing user adoption and system readiness during implementation.

NEW QUESTION # 57
Which access categories are available to maintain restrictions in SAP S/4HANA Cloud Public Edition? Note: There are 3 correct answers to this question.

- **A. Value Help (value help access)**
- **B. Write, Read, Value Help (write access)**
- **C. Read, Value Help (read access)**
- D. Read (read access)
- E. Write, Read (write access)

Answer: A,B,C

Explanation:
In SAP S/4HANA Cloud Public Edition, access restrictions are maintained using specific access categories to control user permissions granularly. The available categories include "Read, Value Help (read access)," which allows users to view data and access value help functionalities; "Value Help (value help access)," which restricts access to only value help features; and "Write, Read, Value Help (write access)," which grants permissions for creating, modifying, reading, and using value help. These categories enable precise control over user access to data and functionalities, ensuring compliance with security policies. The options "Read (read access)" and "Write, Read (write access)" are not standard access categories in this context, as they do not fully align with the system's predefined restriction types.

NEW QUESTION # 58
Which levels of security protection are provided by Secure Network Communication (SNC)? Note: There are 3 correct answers to this question.

- **A. Privacy**
- B. Authorization
- **C. Integrity**
- **D. Authentication**
- E. Availability

Answer: A,C,D

Explanation:
Secure Network Communication (SNC) in SAP systems provides three key levels of security protection:
Authentication, Privacy, and Integrity. Authentication ensures that the communicating parties, such as users or systems, are verified as legitimate, preventing unauthorized access. Privacy protects data during transmission by encrypting it, safeguarding sensitive information from interception or eavesdropping.
Integrity ensures that data is not altered or tampered with during transmission, guaranteeing that the received data matches the sent data. These protections are critical for secure communication in SAP environments, particularly for external interfaces or remote connections. Availability, while important, is not a direct function of SNC, as it relates to system uptime rather than communication

security. Authorization, which controls access rights, is managed by SAP's authorization framework, not SNC. By implementing SNC, SAP systems achieve a robust security posture for network communications, ensuring trust and data protection across distributed landscapes.

NEW QUESTION # 59
