Our ISACA AAISM practice exam simulator mirrors the AAISM exam experience, so you know what to anticipate on ISACA Advanced in AI Security Management (AAISM) Exam (AAISM) certification exam day. Our ISACA Advanced in AI Security Management (AAISM) Exam practice test Getcertkey features various question styles and levels, so you can customize your ISACA AAISM Exam Questions preparation to meet your needs.

ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.
Topic 2	<ul style="list-style-type: none">AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.
Topic 3	<ul style="list-style-type: none">AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.

questions & AAISM exam pdf vce & ISACA Advanced in AI Security Management (AAISM) Exam test training simulator

The study system of our company will provide all customers with the best study materials. If you buy the AAISM latest questions of our company, you will have the right to enjoy all the AAISM certification training materials from our company. More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the AAISM Training Materials, we can guarantee that our company can provide the newest information about the AAISM exam for all people.

ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q247-Q252):

NEW QUESTION # 247

An organization has discovered that employees have started regularly utilizing open-source generative AI without formal guidance. Which of the following should be the CISO's GREATEST concern?

- A. Lack of monitoring
- B. Model hallucinations
- C. Policy violations
- **D. Data leakage**

Answer: D

Explanation:

The greatest immediate risk from unsanctioned use of public or open-source generative AI tools is data leakage-employees may paste confidential or regulated information into third-party systems, resulting in loss of confidentiality, regulatory exposure, and loss of intellectual property. AAISM emphasizes that when AI use occurs outside approved channels, the top control priority is preventing exfiltration of sensitive data via prompts, attachments, and context sharing. Monitoring and policy are necessary enablers, but leakage is the highest-impact failure mode in the short term; hallucinations primarily affect accuracy, not confidentiality. NEW QUESTION # 248

Which of the following is the MAIN objective of the operational phase of AI life cycle management?

- A. Align the model to business needs
- **B. Monitor model performance**
- C. Obtain end-user feedback on the model
- D. Optimize the model's algorithms

Answer: B

Explanation:

In the operational phase, AAISM emphasizes continuous monitoring of models for performance, stability, robustness, drift, data quality, security events, and policy compliance. This includes telemetry, thresholds, alerts, incident response for AI failures, and evidence collection for audits. Alignment to business needs is established earlier in planning/governance; algorithmic optimization and feedback collection are supporting activities, but the primary operational objective is live monitoring and assurance to keep risk within tolerance.

NEW QUESTION # 249

Which of the following is the MOST important factor to consider when selecting industry frameworks to align organizational AI governance with business objectives?

- **A. Risk appetite**

- B. Risk tolerance
- C. Risk threshold
- D. Risk register

Answer: A

Explanation:

According to AAISM governance principles, the risk appetite of the organization is the most important factor in selecting appropriate frameworks for AI governance. Risk appetite defines the level of risk an organization is willing to accept in pursuit of its objectives, ensuring frameworks are aligned with strategic goals. Risk tolerance and thresholds are operational measures derived from appetite, and the risk register is a documentation tool. The foundational consideration for framework alignment is the organization's risk appetite.

NEW QUESTION # 250

An organization decides to use an anomaly-based intrusion detection system (IDS) integrated with a generative adversarial network-enabled AI tool. The integrated tool would MOST effectively detect intrusions by leveraging:

- A. synthetic intrusion data to train the tool's components
- B. automated rule creation to increase model performance
- C. classified real intrusion data based on labeled data
- D. validation data sets to enable highly realistic AI decisions

Answer: A

Explanation:

AAISM describes GANs as effective for synthetic data generation to augment scarce or imbalanced security datasets. In anomaly IDS contexts, GANs can create realistic synthetic attack traffic and edge-case behaviors that improve detector sensitivity and robustness. While labeled "real" data is valuable, the specific advantage of a GAN-integrated pipeline is the capability to generate adversarially realistic synthetic intrusions for training and stress testing. Automated rules are a signature-based paradigm and do not leverage GAN strengths; validation sets are for evaluation, not primary improvement of anomaly coverage.

NEW QUESTION # 251

Which of the following is the GREATEST benefit of performing AI security risk assessments?

- A. The risk register is updated with the latest AI risk
- B. The appropriate level of funding is secured for AI security risk
- C. Risk prioritization decisions are made for AI security
- D. Appropriate privacy risk controls are implemented for AI models

Answer: C

Explanation:

AAISM emphasizes that the core outcome of AI risk assessments is prioritization: mapping threat likelihood and business impact to determine which risks to treat first, at what strength, and with which controls.

Implementing privacy controls (A), funding alignment (B), and updating registers (C) are important outputs, but the greatest benefit is making defensible, prioritized decisions that align with risk appetite and optimize control selection and resource allocation.

NEW QUESTION # 252

.....

As is known to us, there are three different versions about our ISACA Advanced in AI Security Management (AAISM) Exam guide torrent, including the PDF version, the online version and the software version. The experts from our company designed the three different versions of AAISM test torrent with different functions. According to the different function of the three versions, you have the chance to choose the most suitable version of our AAISM study torrent. For instance, if you want to print the AAISM study materials, you can download the PDF version which supports printing. By the PDF version, you can print the ISACA Advanced in AI Security Management (AAISM) Exam guide torrent which is useful for you. If you want to enjoy the real exam environment, the software version will help you solve your problem, because the software version of our AAISM Test Torrent can simulate the real exam environment. In a word, the three different versions will meet your all needs; you can use the most suitable version of our AAISM study torrent according to your needs.
