

Test FlashArray-Implementation-Specialist Testking - FlashArray-Implementation-Specialist Dumps Free Download

2026 Latest Dumpkiller FlashArray-Implementation-Specialist PDF Dumps and FlashArray-Implementation-Specialist Exam Engine Free Share: https://drive.google.com/open?id=12xtU_ptAeAOwgFO6egtADg_0j7D9wayY

Even though the Dumpkiller experts who have designed FlashArray-Implementation-Specialist assure us that anyone who studies properly cannot fail the exam, we still offer a money-back guarantee. This way we prevent pre and post-purchase anxiety. We save your amount by offering the best prep material with up to 1 year of free updates so that you pass the exam on the first attempt without having to retry, saving your time, effort, and money! Dumpkiller offers the Pure Storage FlashArray-Implementation-Specialist Dumps at a very cheap price.

You can write down your doubts or any other question of our Pure Storage Certified FlashArray Implementation Specialist test questions. We warmly welcome all your questions. Our online workers are responsible for solving all your problems with twenty four hours service. You still can enjoy our considerate service after you have purchased our FlashArray-Implementation-Specialist test guide. If you don't know how to install the study materials, our professional experts can offer you remote installation guidance. Also, we will offer you help in the process of using our FlashArray-Implementation-Specialist Exam Questions. Also, if you have better suggestions to utilize our study materials, we will be glad to take it seriously.

Free FlashArray-Implementation-Specialist pdf torrent & Pure Storage FlashArray-Implementation-Specialist exam answers & FlashArray-Implementation-Specialist vce dumps

Revised and updated according to the syllabus changes and all the latest developments in theory and practice, our Pure Storage Certified FlashArray Implementation Specialist dumps are highly relevant to what you actually need to get through the certifications tests. Moreover they impart you information in the format of FlashArray-Implementation-Specialist Questions and answers that is actually the format of your real certification test. Hence not only you get the required knowledge but also find the opportunity to practice real exam scenario. For consolidation of your learning, our Pure Storage Certified FlashArray Implementation Specialist dumps PDF file also provide you sets of practice questions and answers. Doing them again and again, you enrich your knowledge and maximize chances of an outstanding exam success.

Pure Storage FlashArray-Implementation-Specialist Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Installation: This section of the exam measures the skills of Enterprise Infrastructure Technicians and focuses on executing a successful installation of FlashArray systems. It tests the ability to perform physical setup, cabling, configuration of network settings, and the application of initial system configurations necessary for full deployment.
Topic 2	<ul style="list-style-type: none"> • Post-Installation • Upgrade: This section of the exam measures the skills of FlashArray Implementation Specialists and evaluates how professionals confirm system functionality after installation or an upgrade. It involves validating connectivity, running health checks, confirming configurations, and ensuring that the deployment meets operational expectations.
Topic 3	<ul style="list-style-type: none"> • Upgrades: This section of the exam measures the skills of FlashArray Implementation Specialists and focuses on tasks involved in managing firmware and software upgrades. Candidates must demonstrate knowledge of upgrade planning, verification steps, and rollback procedures, ensuring that systems are updated with minimal disruption to service.
Topic 4	<ul style="list-style-type: none"> • Pre-Installation • Upgrade: This section of the exam measures the skills of Enterprise Infrastructure Technicians and covers all preparation activities before deploying or upgrading a Pure Storage FlashArray. It includes understanding environmental requirements, verifying prerequisites, checking compatibility, and validating system readiness through appropriate tools and documentation.

Pure Storage Certified FlashArray Implementation Specialist Sample Questions (Q138-Q143):

NEW QUESTION # 138

Which I/O card type is compatible across all FlashArray models?

- A. iSCSI
- B. 10GBaseT
- C. FC

Answer: C

Explanation:

The Fibre Channel (FC) I/O card type is the only option listed that is universally compatible and supported across all FlashArray models, from the entry-level //X10 and //X20 up to the high-end //X90 and //XL.

Fibre Channel: Pure Storage architectures rely heavily on Fibre Channel as the primary enterprise storage protocol. All chassis generations and controller sizes feature PCIe risers compatible with Pure's standard 16Gb or 32Gb Fibre Channel HBAs.

Ethernet/iSCSI: While all arrays support iSCSI, the physical card type varies.

10GBase-T: This refers to "copper" Ethernet (RJ45). This card type is not supported on all models. High-end FlashArrays (like the //X70, //X90, and //XL) typically utilize SFP+ or QSFP28 cages for optical connectivity (10/25GbE or 40/100GbE) and do not standardly support 10GBase-T copper cards due to power and latency characteristics.

Therefore, while the protocol (iSCSI) is supported everywhere, the specific physical card (10GBase-T) is not. Fibre Channel cards remain the consistent hardware constant across the entire product line.

NEW QUESTION # 139

An Implementation Engineer is setting up a customer environment and has specified a number of NTP servers. Which command should the Implementation Engineer run to list the NTP servers that have been configured?

- A. purearray list --ntpserver
- B. puredns list --ntpserver
- C. purenetwork list --ntpserver

Answer: A

Explanation:

To view the currently configured Network Time Protocol (NTP) servers on a FlashArray, the correct command is `purearray list --ntpserver`.

Command Hierarchy: While NTP is a networking function, in the Purity CLI object model, time synchronization is considered a global array attribute rather than a specific interface setting. Therefore, it falls under the `purearray` command namespace.

Usage: Running `purearray list --ntpserver` returns a list of the IP addresses or FQDNs of the time servers the array is currently using to sync its system clock.

Invalid Options:

`purenetwork list` (Option B) displays IP interface configurations (IPs, subnets, gateways) but does not list service-level pointers like NTP.

`puredns list` (Option A) is strictly for DNS nameservers and suffix configurations.

Importance: Verifying NTP is critical for log timestamp accuracy, ActiveCluster mediation, and Kerberos authentication.

NEW QUESTION # 140

Which NVRAM bays are always populated on the FlashArray//XR2/3?

- A. 0-1
- B. 0-2
- C. 0-3

Answer: A

Explanation:

The FlashArray//XR2 and //XR3 architectures utilize dedicated NVRAM modules to provide the non-volatile write cache necessary for acknowledging writes safely before they are destaged to flash. These chassis are equipped with multiple NVRAM bays (labeled NVB0 through NVB3).

For standard configurations, specifically the //X10, //X20, and //X50 models, the system requires a redundant pair of NVRAM modules to function. These are always installed in NVRAM bays 0 and 1.

Bays 0 and 1 form the primary high-availability pair. If one fails, the other retains the data, and the system can continue to operate (though often in write-through mode or with alerts).

Higher-end models like the //X70 and //X90 populate all four bays (0-3) to provide the larger write buffer required for their higher throughput capabilities.

However, since the question asks which bays are always populated (i.e., the minimum requirement for the platform to function across the board), the answer is the foundational pair in slots 0 and 1. An Implementation Engineer must ensure these specific slots are populated first during any chassis maintenance or upgrade.

NEW QUESTION # 141

What command should the Implementation Engineer run to view NVRAM install and update status?

- A. `purehw list --all`
- B. `purearray list`
- C. `puredrive list`

Answer: A

Explanation:

Monitoring the health and status of physical hardware components is a key task during upgrades and daily administration. While the FlashArray GUI provides a visual representation, the CLI offers granular detail.

To view the specific installation status, firmware version, and health of the NVRAM modules, the correct command is `purehw list --all`.

`purehw`: This command suite is dedicated to reporting on the physical hardware components (fans, power supplies, temperature sensors, and NVRAM).

`--all` (or listing specific types) ensures that internal components like the NVRAM modules are displayed in the output.

The output will show the "Status" (e.g., ok, installing, updating), which is critical during a Purity upgrade or hardware replacement to confirm that the NVRAM firmware is being applied or that a new module has been successfully integrated.

`puredrive list` is strictly for the storage media (SSDs/DFMs), and `purearray list` shows high-level system info (name, ID, capacity) rather than component-level health.

NEW QUESTION # 142

A customer has a FlashArray X20R3 with 22/22 data packs in the chassis at 80% space usage and wishes to swap one of the data packs for a 45TB pack. What step needs to be taken to facilitate this consolidation?

- A. Send a DirectFlash Shelf without any additional capacity.
- B. Reduce array space usage to allow for the evacuation of the 22TB packs.
- C. Send a DirectFlash Shelf with a 63TB of temporary extra capacity.

Answer: C

Explanation:

To facilitate a Capacity Consolidation (CapCon) in a chassis that is physically full (both data pack slots occupied) and logically utilized above the threshold to allow internal evacuation, the standard procedure requires temporary external capacity, often referred to as "swing gear." In this scenario, the FlashArray//X20 chassis is fully populated with two 22TB data packs. Since there are no empty slots to insert the new 45TB pack, one of the existing packs must be removed first. However, with the array at 80% usage, the data residing on the pack designated for removal (roughly half the raw capacity) cannot fit into the remaining free space of the other pack.

Therefore, Pure Storage Support will provision a DirectFlash Shelf (DFS) containing temporary capacity (e.g., a 63TB pack as mentioned in Option B). The Implementation Engineer attaches this shelf, adds it to the system, and utilizes it as a destination to evacuate data from the old 22TB pack. Once the old pack is empty and removed, the new 45TB pack is installed into the chassis. Finally, the data is moved from the temporary shelf back into the new chassis capacity, and the temporary shelf is disconnected and returned. Option A is incorrect because an empty shelf provides no storage to offload data, and Option C is operationally unfeasible for most customers.

NEW QUESTION # 143

.....

If you prefer to prepare for your exam on paper, then our FlashArray-Implementation-Specialist exam materials will be your best choice. FlashArray-Implementation-Specialist PDF version is convenient to read and printable, and you can take them with you, and you can practice them anywhere and anyplace. Besides, free demo for FlashArray-Implementation-Specialist PDF version is available, and you can try before buying. We are pass guarantee and money back guarantee and if you fail to pass the exam. You can receive the downloading link and password for FlashArray-Implementation-Specialist Training Materials within ten minutes for FlashArray-Implementation-Specialist exam materials, if you don't receive, you can contact with us, and we will solve the problem for you.
