EC-COUNCIL EC-Council Disaster Recovery Professional (EDRP) Sample Questions (Q149-Q154):

NEW QUESTION # 149

Which of the following functions is performed by change control?

- A. It maintains visibility of changes to the system.
- B. It ensures that changes to the system are approved.
- C. It tracks changes to system hardware, software, firmware, and documentation.
- **D. It tracks and approves changes to system hardware, software, firmware, and documentation.**

Answer: D

NEW QUESTION # 150

Which of the following virtualization methods requires a software called containers or virtual engines to run?

- A. Network Virtualization
- **B. OS-Based Virtualization**
- C. Data Virtualization
- D. Desktop Virtualization

Answer: B

Explanation:

OS-Based Virtualization (e.g., containerization) uses software like containers (Docker, LXC) or virtual engines to run multiple isolated instances on a single OS kernel, as described.

* Option A (Data Virtualization): Abstracts data access, not container-based.

* Option B (Network Virtualization): Virtualizes network resources, not OS-based.

* Option C (Desktop Virtualization): Virtualizes desktops, not container-specific.

* "OS-Based Virtualization leverages containers or virtual engines to isolate applications on a shared OS, enhancing efficiency" (Module: Virtualization and Recovery, Section: Virtualization Types).

NEW QUESTION # 151

Which of the following is also known as the doomsday recovery level in 3DR?

- A. Archiving of Data
- **B. Remote Backup of Data Protection**
- C. Local Data Protection
- D. Backup of Data

Answer: B

Explanation:

In the 3DR (Data Protection, Disaster Recovery, Doomsday Recovery) model, Remote Backup of Data Protection is termed the "doomsday recovery level," representing the ultimate offsite safeguard against catastrophic loss.

- * Option A: Basic local protection, not doomsday-level.
- * Option B: Long-term storage, not recovery-focused.
- * Option C: General backup, not remote-specific.
- * "Remote Backup of Data Protection, dubbed the doomsday recovery level in 3DR, ensures data survival through offsite replication" (Module: Data Protection Strategies, Section: 3DR Model).

NEW QUESTION # 152

Which of the following methods keeps the SYSVOL folder synchronized inside multiple servers present on the same domain?

- **A. Distributed File System Replication**
- B. Load Balancing
- C. Failover
- D. Data Backup

Answer: A

Explanation:

Distributed File System Replication (DFSR) synchronizes the SYSVOL folder across domain controllers in a Windows domain, ensuring consistency. The document's answer (D) is incorrect; backups don't synchronize live data.

- * Option A (Load Balancing): Distributes traffic, not file sync.
- * Option B (Failover): Switches to backups, not synchronization.
- * Option D (Data Backup): Copies data, not real-time sync.
- * "DFSR ensures SYSVOL synchronization across domain servers, maintaining uniform policy and file access" (Module: Server Management, Section: Domain Synchronization).

The SYSVOL folder in a Windows domain environment contains critical data such as Group Policy objects and logon scripts, and it must be kept synchronized across multiple domain controllers within the same domain. Distributed File System Replication (DFSR) is the technology used in modern Windows Server environments (since Windows Server 2008 and later) to replicate and synchronize the SYSVOL folder across these servers. DFSR ensures that changes made to SYSVOL on one domain controller are efficiently replicated to others, maintaining consistency.

- * A. Load Balancing: This method distributes network or application traffic across multiple servers to optimize resource use and availability, but it does not handle file synchronization.
- * B. Failover: This refers to switching to a backup system in case of failure, not synchronizing data between servers.
- * D. Data Backup: This involves creating copies of data for recovery purposes, not real-time synchronization across servers.

Thus, Distributed File System Replication (DFSR) is the method that keeps the SYSVOL folder synchronized across multiple servers in the same domain.

NEW QUESTION # 153

Which of the following Tier 1 policies will identify who is responsible for what?

- A. Compliance or Consequences
- **B. Responsibilities**
- C. Scope
- D. Topic

Answer: B
