## Juniper JN0-232 New Exam Camp - Sample JN0-232 Test Online

One of the key factors for passing the exam is practice. Candidates must use JN0-232 practice test material to be able to perform at their best on the real exam. This is why BraindumpsPrep has developed three formats to assist candidates in their Juniper JN0-232 Preparation. These formats include desktop-based Juniper JN0-232 practice test software, web-based practice test, and a PDF format.

## Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q69-Q74):

### NEW QUESTION # 69

What happens if no match is found in both zone-based and global security policies?

- A. The traffic is logged for further analysis.
- B. The traffic is discarded by the default security policy.
- C. The traffic is allowed by default.
- D. The traffic is redirected to a predefined safe zone.

**Answer: B**

Explanation:

If traffic does not match any zone-based or global security policy, the SRX applies the default security policy, which denies and discards the traffic silently. This ensures that only explicitly permitted traffic is allowed through the firewall.

### NEW QUESTION # 70

What are two ways that an SRX Series device identifies content? (Choose two.)

- A. It uses AppID.
- B. It identifies and inspects the file extension of each file.
- C. It identifies file types in HTTP, FTP, and e-mail protocols.
- D. It uses ALGs.

**Answer: A,C**

Explanation:

The SRX uses AppID (Application Identification) to classify and inspect application traffic, enabling content-based controls such as web filtering and UTM.

The SRX can identify file types carried within HTTP, FTP, and e-mail protocols, allowing enforcement of content filtering, antivirus scanning, and data protection policies.

### NEW QUESTION # 71

Click the Exhibit button.

Which type of policy is shown in the exhibit?

- A. inter-zone policy
- B. intra-zone policy
- C. default policy
- D. global policy

**Answer: B**

Explanation:

From the exhibit configuration:

```
[edit security policies from-zone Trust to-zone Trust]
```

```
policy allow-all {
```

```
match {
```

```
source-address any;
```

```
destination-address any;
```

```
application any;
```

```
}
```

```
then {
```

```
permit;
```

```
}
```

```
}
```

\* The from-zone and to-zone are both set to Trust # Trust.

\* This means the policy is governing traffic within the same zone.

\* Policies within the same zone are called intra-zone policies.

Analysis of options:

\* Global policy (A): Applied universally across zones, not zone-specific. Not the case here.

\* Inter-zone policy (B): Applies between two different zones (e.g., Trust # Untrust). Not the case here since both zones are Trust.

\* Intra-zone policy (C): Correct. Applies to traffic within the same zone (Trust # Trust).

\* Default policy (D): The implicit deny-all policy that applies when no policy matches. Not shown in this exhibit.

Correct Policy Type: Intra-zone policy

Reference: Juniper Networks - Security Policy Types (Inter-zone, Intra-zone, and Global), Junos OS Security Fundamentals.

### NEW QUESTION # 72

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. This is the first NAT rule in the rule set.
- B. Traffic does not match this NAT rule.
- C. Only traffic that matches the default route matches this NAT rule.
- D. All traffic that ingresses the trust security zone and egresses the untrust security zone matches this NAT rule.

**Answer: A,D**

Explanation:

The rule matches all source addresses (0.0.0.0 - 255.255.255.255) from the Trust zone to the Untrust zone, so all traffic going from Trust to Untrust is eligible for this source NAT rule.

The field Rule position : 1 indicates that this is the first NAT rule in the source-NAT rule set.

### NEW QUESTION # 73

You want to implement user-based enforcement of security policies without the requirement of certificates and supplicant software. Which security feature should you implement in this scenario?

- A. integrated user firewall
- **B. Juniper ATP**
- C. 802.1X
- D. screens

**Answer: B**

Explanation:

In this scenario, you should implement Juniper ATP (Advanced Threat Prevention). Juniper ATP provides user-based enforcement of security policies without the requirement of certificates and supplicant software. It uses a combination of behavioral analytics, sandboxing, and threat intelligence to detect and respond to advanced threats in real time. Juniper ATP provides robust protection against targeted attacks, malicious insiders, and zero-day malware.

### NEW QUESTION # 74

.....

The passing rate of our study material is very high, and it is about 99%. We provide free download and tryout of the JN0-232 question torrent, and we will update the JN0-232 exam torrent frequently to guarantee that you can get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our JN0-232 Latest Questions are compiled by the experienced professionals elaborately. So it will be very convenient for you to buy our product and it will do a lot of good to you.
