Some people are inclined to read paper materials. Do not worry. Our company has already taken your thoughts into consideration. Our PDF version of the PDI practice materials support printing on papers. All contents of our PDI Exam Questions are arranged reasonably and logically. In addition, the word size of the PDI study guide is suitable for you to read. And you can take it conveniently.

The PDI Exam covers a broad range of topics related to Salesforce development, including Apex code, Visualforce pages, Lightning Components, and data modeling. PDI exam is structured to assess a developer's ability to design and build custom applications that meet business requirements on the Salesforce platform. PDI exam also tests the developer's knowledge of best practices for Salesforce development, including security, performance, and scalability.

Salesforce PDI exam is intended for developers who have experience building custom applications on the Salesforce platform. PDI exam tests the knowledge and skills of developers in areas such as Apex programming language, Visualforce, and the Salesforce Lightning component framework. Developers who pass the Salesforce PDI exam will have demonstrated their proficiency in using these technologies to build custom applications on the Salesforce platform.

The benefit in Obtaining the PDI Exam Certification

- After completing the Salesforce Certified Platform Developer I certification Candidate becomes a solid, well-rounded Salesforce Certified Platform Developer I.
- If the Candidate has the desire to move up to a higher-paying position in an organization. This certification will help as always.
- A candidate might have incredible IT skills. Employers that do the hiring need to make decisions based on limited information and as it always. When they view the official Salesforce Certified Platform Developer I certification, they can be guaranteed that a candidate has achieved a certain level of competence.
- When an organization hiring or promotion an employee, then the decision is made by human resources. Now while Candidate may have an IT background, they do their decisions in a way that takes into record many different factors. One thing is candidates have formal credentials, such as the Salesforce Certified Platform Developer I.

Salesforce Platform Developer I (PDI) Sample Questions (Q136-Q141):

NEW QUESTION # 136

Refer to the following code that runs in an Execute Anonymous block:

- A. The transaction will succeed and the first ten thousand records will be committed to the database.
- B. In an environment where the full result set is returned, what is a possible outcome of this code?
- C. The total number of DML statements will be exceeded.
- D. The total number of records processed as a result of DML statements will be exceeded

Answer: D

NEW QUESTION # 137

A developer must create a CreditcardPayment class that provides an implementation of an existing Payment class. Public virtual class Payment { public virtual void makePayment(Decimal amount) { /*implementation*/ } } Which is the correct implementation?

- A. Public class CreditCardPayment implements Payment {
public override void makePayment(Decimal amount) { /*Implementation*/ }
}
- B. Public class CreditCardPayment extends Payment {
public virtual void makePayment(Decimal amount) { /*implementation*/ }
}
- C. Public class CreditCardPayment implements Payment {
public virtual void makePayment(Decimal amount) { /*implementation*/ }
}
- D. Public class CreditcardPayment extends Payment {
public override void makePayment(Decimal amount) { /*implementation*/ }
}

Answer: D

NEW QUESTION # 138

The Account object in an organization has a master-detail relationship to a child object called Branch. The following automations exist:

- * Roll-up summary fields
- * Custom validation rules
- * Duplicate rules

developer created a trigger on the Account object.

Which two things should the developer consider while testing the trigger code?

Choose 2 answers

- A. Rollup summary fields can cause the parent record to go through Save.
- B. The validation rules will cause the trigger to fire again.
- C. The trigger may fire multiple times during a transaction.
- D. Duplicate rules are executed once all DML operations commit to the database.

Answer: A,C

Explanation:

A . Roll-up summary fields can cause the parent record to go through Save:

When a roll-up summary field on a parent object (like Account) is updated due to changes in child records (like Branch), the parent record (Account) is implicitly saved again.

This can result in the execution of the trigger on the parent object. Developers must consider this behavior to avoid unintended recursion or infinite loops.

Reference:

C . The trigger may fire multiple times during a transaction:

Triggers can execute multiple times within a single transaction, especially when there are operations such as updates to the parent record caused by roll-up summary fields or workflows.

Developers should implement logic to ensure that the trigger handles multiple executions correctly (e.g., using a static variable to prevent recursion).

Why not the other options?

B . Duplicate rules are executed once all DML operations commit to the database:

This is incorrect because duplicate rules execute before the DML operation is committed. Duplicate rules prevent duplicate records from being created or updated before the database operation occurs.

D . The validation rules will cause the trigger to fire again:

This is incorrect because validation rules do not cause triggers to fire again. Validation rules validate the record and may prevent DML operations, but they do not independently re-trigger the Apex trigger.

NEW QUESTION # 139

A custom object Trainer_c has a lookup field to another custom object Gym_c.

Which SOQL query will get the record for the Viridian City Gym and all its trainers?

- A. SELECT Id, (SELECT Id FROM Trainers_c) FROM Gym_c WHERE Name = 'Viridian City Gym'
- **B. SELECT Id, (SELECT Id FROM Trainers_r) FROM Gym_c WHERE Name = 'Viridian City Gym'**
- C. SELECT Id, (SELECT Id FROM Trainer_c FROM Gym_c WHERE Name = 'Viridian City Gym'
- D. SELECT ID FROM Trainer_c WHERE Gym_r.Name = 'Viridian City Gym'

Answer: B

Explanation:

To query related child records in a lookup or master-detail relationship:

* Use the parent object (Gym_c) to retrieve its child records (Trainer_c) through a nested query.

* The child relationship name (Trainers_r) is derived from the lookup field.
