Test JN0-336 Preparation - JN0-336 Guaranteed Passing

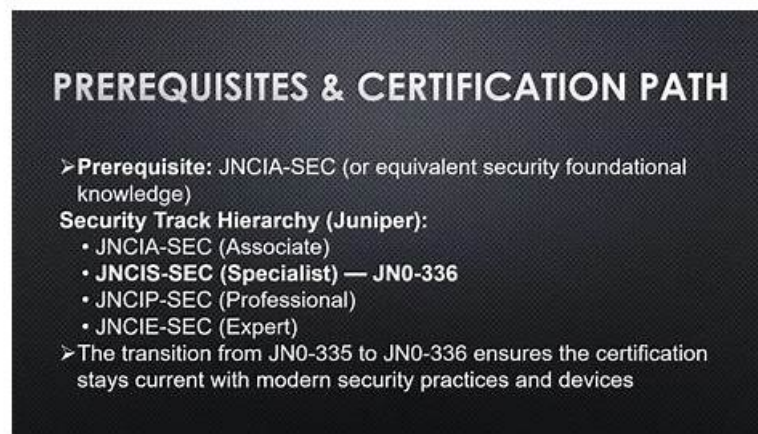

BONUS!!! Download part of Actual4Exams JN0-336 dumps for free: https://drive.google.com/open?id=1zhJwP6Bv2rJiBiJ8JgVvdzn-6TrM0rMq

There are three versions of our JN0-336 study questions on our website: the PDF, Software and APP online. And our online test engine and the windows software of the JN0-336 guide materials are designed more carefully. During our researching and developing, we always obey the principles of conciseness and exquisiteness. All pages of the JN0-336 Exam simulation are simple and beautiful. As long as you click on them, you can find the information easily and fast.

Considering current situation, we made a survey and find that most of the customers are worried about their privacy disclosure. Here our JN0-336 exam prep has commitment to protect every customer' personal information. About customers' privacy, we firmly safeguard their rights and oppose any illegal criminal activity with our JN0-336 Exam Prep. We promise to keep your privacy secure with effective protection measures if you choose our JN0-336 exam question. Given that there is any trouble with you, please do not hesitate to leave us a message or send us an email; we sincere hope that our JN0-336 test torrent can live up to your expectation.

Pass the Juniper Exam with Actual4Exams Juniper JN0-336 Exam Questions

Constantly updated multiple mock exams with a great number of questions that will help you in better self-assessment. Memorize all your previous Security, Specialist (JNCIS-SEC) (JN0-336) exam questions attempts and display all the changes in your results at the end of each Juniper JN0-336 Practice Exam attempt. Users will be able to customize the Security, Specialist (JNCIS-SEC) (JN0-336) practice test software by time or question types. Supported on all Windows-based PCs.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q82-Q87):

NEW QUESTION # 82
Which two statements are true about the vSRX? (Choose two.)

- A. It does not have VMXNET3 vNIC support.
- B. Linux is the base OS.
- C. UNIX is the base OS.
- D. It has VMXNET3 vNIC support.

Answer: B,D

NEW QUESTION # 83
Exhibit
Using the information from the exhibit, which statement is correct?

- A. Node1 is the active node for the control plane
- B. Redundancy group 1 is in an ineligible state.

- C. There are no issues with the cluster.
- D. Redundancy group 0 is in an ineligible state.

Answer: C

NEW QUESTION # 84
You enable chassis clustering on two devices and assign a cluster ID and a node ID to each device.
In this scenario, what is the correct order for rebooting the devices?

- A. Reboot the secondary device, then the primary device.
- B. Reboot only the primary device since the secondary will assign itself the correct cluster and node ID.
- C. Reboot only the secondary device since the primary will assign itself the correct cluster and node ID.
- D. Reboot the primary device, then the secondary device.

Answer: A

Explanation:
When chassis clustering is enabled and IDs are assigned, it is typically recommended to first reboot the secondary device. This allows the secondary device to fully integrate and recognize its role and settings within the cluster without affecting the ongoing traffic that the primary device might be handling.
Once the secondary device has successfully rebooted and is operational within the cluster, the primary device can then be rebooted. This ensures that the primary device's reboot does not cause any network downtime, as the secondary device, now fully operational, can take over the traffic and roles as needed.

NEW QUESTION # 85
Click the Exhibit button.
Which two statements describe the output shown in the exhibit? (Choose two.)

- A. Node 0 is controlling traffic for redundancy group 1.
- B. Redundancy group 1 experienced an operational failure.
- C. Redundancy group 1 was administratively failed over.
- D. Node 1 is controlling traffic for redundancy group 1.

Answer: A,D

Explanation:
The output indicates that node1 has a priority of 200 and is marked as "Primary," which means it is currently the active node controlling traffic for redundancy group 1. The "Primary" status designates that this node is handling the traffic for the specified redundancy group.
According to the exhibit, node0 is listed with a priority of 0 and is marked as "Secondary." This status indicates that node0 is currently not controlling traffic for redundancy group 1, serving instead in a standby role ready to take over should node1 fail or become unavailable.

NEW QUESTION # 86
You want to control when cluster failovers occur.
In this scenario, which two specific parameters would you configure on an SRX Series device? (Choose two.)

- A. heartbeat-address
- B. heartbeat-cos
- C. heartbeat-threshold
- D. heartbeat-interval

Answer: C,D

Explanation:
To control when cluster failovers occur, you need to configure two specific parameters on an SRX Series device: heartbeat-interval and heartbeat-threshold. These parameters determine how often the nodes in a cluster exchange heartbeat messages and how many consecutive heartbeats can be missed before a failover is triggered. The heartbeat-interval specifies the time interval in seconds

between each heartbeat message. The default value is 1 second and the range is from 0.1 to 10 seconds. The heartbeat- threshold specifies the number of consecutive heartbeats that must be missed before a failover occurs.

The default value is 3 and the range is from 2 to 255.
