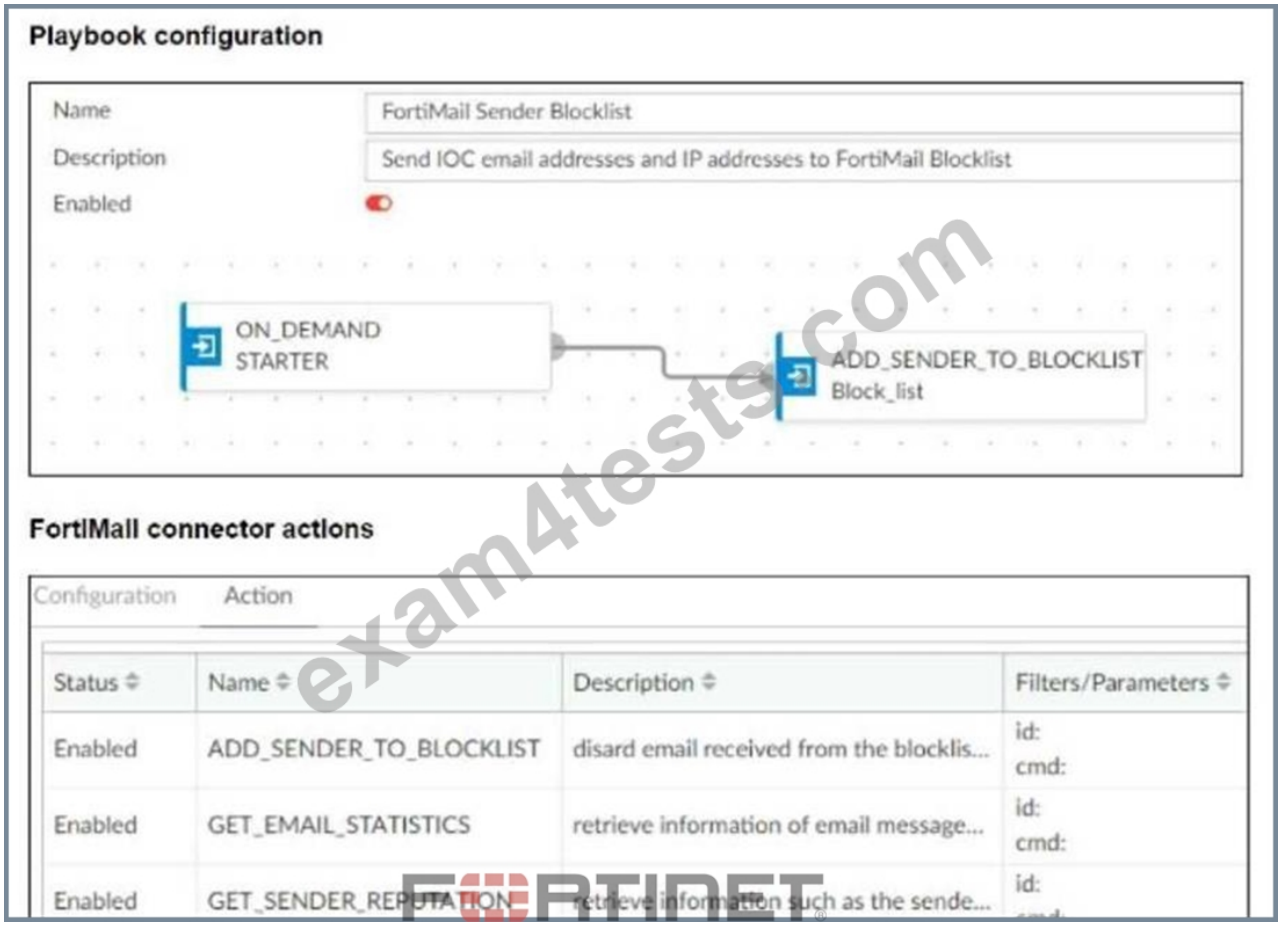
Fortinet FCSS - Security Operations 7.4 Analyst Sample Questions (Q50-Q55):

NEW QUESTION # 50
Refer to the exhibits.



The FortiMail Sender Blocklist playbook is configured to take manual input and add those entries to the FortiMail abc. com domain-level block list. The playbook is configured to use a FortiMail connector and the ADD_SENDER_TO_BLOCKLIST action.
Why is the FortiMail Sender Blocklist playbook execution failing7

- A. You must use the GET_EMAIL_STATISTICS action first to gather information about email messages.
- B. The connector credentials are incorrect
- C. FortiMail is expecting a fully qualified domain name (FQDN).
- D. The client-side browser does not trust the FortiAnalzyer self-signed certificate.

Answer: C

Explanation:
Understanding the Playbook Configuration:
The playbook "FortiMail Sender Blocklist" is designed to manually input email addresses or IP addresses and add them to the FortiMail block list.
The playbook uses a FortiMail connector with the action ADD_SENDER_TO_BLOCKLIST.
Analyzing the Playbook Execution:
The configuration and actions provided show that the playbook is straightforward, starting with an ON_DEMAND STARTER and proceeding to the ADD_SENDER_TO_BLOCKLIST action.
The action description indicates it is intended to block senders based on email addresses or domains.
Evaluating the Options:
Option A: Using GET_EMAIL_STATISTICS is not required for the task of adding senders to a block list.
This action retrieves email statistics and is unrelated to the block list configuration.
Option B: The primary reason for failure could be the requirement for a fully qualified domain name (FQDN). FortiMail typically expects precise information to ensure the correct entries are added to the block list.
Option C: The trust level of the client-side browser with FortiAnalyzer's self-signed certificate does not impact the execution of the playbook on FortiMail.
Option D: Incorrect connector credentials would result in an authentication error, but the problem described is more likely related to the format of the input data. Conclusion:
The FortiMail Sender Blocklist playbook execution is failing because FortiMail is expecting a fully qualified domain name (FQDN).

NEW QUESTION # 51
Which statement best describes the MITRE ATT&CK framework?

- A. Itprovides a high-level description of common adversary activities, but lacks technical details
- B. It covers tactics, techniques, and procedures, but does not provide information about mitigations.
- C. It describes attack vectors targeting network devices and servers, but not user endpoints.
- D. It contains some techniques or subtechniques that fall under more than one tactic.

Answer: D

Explanation:
* Understanding the MITRE ATT&CK Framework:
* The MITRE ATT&CK framework is a comprehensive matrix of tactics and techniques used by adversaries to achieve their objectives.
* It is widely used for understanding adversary behavior, improving defense strategies, and conducting security assessments.
* Analyzing the Options:
* Option A:The framework provides detailed technical descriptions of adversary activities, including specific techniques and subtechniques.
* Option B:The framework includes information about mitigations and detections for each technique and subtechnique, providing comprehensive guidance.
* Option C:MITRE ATT&CK covers a wide range of attack vectors, including those targeting user endpoints, network devices, and servers.
* Option D:Some techniques or subtechniques do indeed fall under multiple tactics, reflecting the complex nature of adversary activities that can serve different objectives.
* Conclusion:
* The statement that best describes the MITRE ATT&CK framework is that it contains some techniques or subtechniques that fall under more than one tactic.
References:
* MITRE ATT&CK Framework Documentation.
* Security Best Practices and Threat Intelligence Reports Utilizing MITRE ATT&CK.
