NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38
Which three of the following test methods are used to ensure that the smoke detectors are within their sensitivity range? (Choose three.)

- A. Test approved by the engineer
- B. Manufacturer's calibrated sensitivity test instrument
- C. Listed control equipment arranged for testing
- D. AHJ approved calibrated test

Answer: B,C,D

Explanation:
To verify that smoke detectors are operating within their listed sensitivity range, NFPA 72 provides three approved testing methods. These ensure proper functionality and compliance with safety requirements.
NFPA 72 (2022), Section 14.4.4.3.1:
"Sensitivity shall be checked using any of the following methods:
(1) Calibrated test method approved by the authority having jurisdiction (2) Listed control equipment arranged for the purpose (3) Calibrated sensitivity test instrument of the smoke detector manufacturer" The option "test approved by the engineer" is not listed among the approved sensitivity test methods in NFPA
72, and therefore is not acceptable for compliance.

NEW QUESTION # 39
Which of the following options is required while conducting annual testing of an audiovisual device?

- A. Confirm sound level based on design
- B. Confirm voice intelligibility
- C. Verify proper setting of candela rating
- D. Verify proper operation

Answer: D

Explanation:
When performing annual testing of notification appliances such as strobes or horns, NFPA 72 mandates functional testing- which means checking that they operate correctly when activated.
NFPA 72 (2022), Table 14.4.3.2 - Testing Frequencies and Methods:
Under "Notification Appliances," the required method for both audible and visible devices is:
"Functional test - verify proper operation."
While things like sound levels and candela settings are verified during acceptance testing or design review, the annual requirement is simply to verify that they work.
Correct answer: C. Verify proper operation

NEW QUESTION # 40
A disconnection of the primary phone line shall cause which of the following events to occur?

- A. Activation of notification appliance
- B. Local annunciation only
- C. Notification via secondary phone line
- D. Supervisory condition

Answer: D

Explanation:
Fire alarm systems that communicate via telephone lines are required to monitor those lines for disconnection.
If the primary line fails, it must be reported as a supervisory condition, and the system will attempt communication via the secondary line.
NFPA 72 (2022), Section 26.6.4.4.4.1:
"A single communications technology shall be monitored for integrity. Loss of the supervising line shall result in a supervisory signal..."
So, if the primary phone line is disconnected, the correct system response is to issue a supervisory signal, not a general alarm or just a local alert.
Correct answer: D. Supervisory condition

NEW QUESTION # 41
The inspection phase, as opposed to the testing phase, of system control equipment should concentrate on which of the following tasks?

- A. Visual inspection only
- B. Proof of signals at monitoring facility
- C. Operational reliability only
- D. Activation of all initiating devices

Answer: A

Explanation:
NFPA 72 defines inspection as a visual examination of a system or component to verify that it appears to be in operating condition and is free of physical damage.
NFPA 72 (2022), Section 3.3.138 - Inspection:
"A visual examination of a system or portion thereof to verify that it appears to be in operating condition and is free of physical damage." Testing, on the other hand, involves functional activation.
Correct answer: D. Visual inspection only

NEW QUESTION # 42
What is the maximum extended interval allowed for equipment to get inspected?

- A. 3 months
- B. 18 months
- C. 6 months
- D. 12 months

Answer: D

Explanation:
Inspection intervals are detailed inNFPA 72, Table 14.3.1, which outlines the maximum intervals for various components. Most fire alarm system components require inspectionat least annually, which equals12 months
.
NFPA 72 (2022), Table 14.3.1 - Frequency of Inspection Tasks:
You'll see that the default maximum inspection interval for initiating devices, control equipment, and notification appliances is12 months.
Unless specifically stated otherwise (e.g., by manufacturer instructions or performance-based design), you cannot exceed that.
Correct answer: C. 12 months
