BTW, DOWNLOAD part of VCEEngine AZ-500 dumps from Cloud Storage: <https://drive.google.com/open?id=1Q7QMz5MxH42Vm3PZHV0JGqM8nYghHOW1>

Our AZ-500 exam torrent is available in PDF, software, and online three modes, which allowing you to switch learning materials on paper, on your phone or on your computer, and to study anywhere and anytime with the according version of AZ-500 practice test. Before you purchase the system, AZ-500 Practice Test provides you with a free trial service, so that customers can fully understand our system before buying; after the online payment is successful, you can receive mail from customer service in 5 to 10 minutes, and then immediately begin to learn AZ-500 training prep.

## What are the best preparation options for the Microsoft AZ-500 Exam?

The candidates can explore two training options for the Microsoft AZ-500 certification exam. There are the free online option and the paid instructor-led training. As the name suggested, the first variant does not require that you pay for your training. It has six learning paths and the links to these modules can be found on the official website. These paths include:

- Implementing Resource Management Security within Azure
- Managing Identity & Access within Azure AD
- Implementing Virtual Machine Host Security within Azure
- Securing Cloud Applications in Azure
- Implementing Network Security within Azure

Each of the courses has different modules and you can find their details on the Microsoft website. If you don't have a budget for exam preparation, these learning paths are highly recommended to help you achieve success in your certification test.

The instructor-led training is a paid course designed to help the applicants gain competence in the objectives of the certification exam. It offers the students the skills and knowledge required to implement different security controls, identify and remediate different security vulnerabilities, and maintain the security posture of an organization. The course is intended for those individuals who already hold the position of an Azure Security Engineer or who are executing security tasks in their day-to-day job. This training is also the perfect option for the suit engineers who want to improve their expertise in providing security for Azure-based digital platforms.

## AZ-500 New Dumps Book & Reliable AZ-500 Test Book

The AZ-500 web-based practice questions carry the above-mentioned notable features of the desktop-based software. This version of VCEEngine's AZ-500 practice questions works on Mac, Linux, Android, iOS, and Windows. Our customer does not need troubling plugins or software installations to attempt the web-based AZ-500 Practice Questions. Another benefit is that our AZ-500 online mock test can be taken via all browsers, including Chrome, MS Edge, Internet Explorer, Safari, Opera, and Firefox.

To earn the Microsoft AZ-500 Certification, candidates need to pass a single exam that covers various security topics related to

Azure. AZ-500 exam covers a wide range of security controls and techniques, including identity and access management, network security, data protection, and threat protection. Candidates are also expected to have a good understanding of Azure security services and features.

## Microsoft Azure Security Technologies Sample Questions (Q314-Q319):

### NEW QUESTION # 314

You have an Azure subscription that contains the custom roles shown in the following table.

Name	Type
Role1	Azure Active Directory (Azure AD)
Role2	Azure subscription

In the Azure portal, you plan to create new custom roles by cloning existing roles. The new roles will be configured as shown in the following table.

Name	Type
Role3	Azure AD
Role4	Azure subscription

Which roles can you clone to create each new role? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Role3:

- ☐ Role1 only
- ☐ Built-in Azure AD roles only
- ☐ Role1 and built-in Azure AD roles only
- ☐ Role1, built-in Azure AD roles, and built-in Azure subscription roles

Role4:

- ☐ Role2 only
- ☐ Built-in Azure AD roles only
- ☐ Role2 and built-in Azure subscription roles only
- ☐ Role2, built-in Azure subscription roles, and built-in Azure AD roles

**Answer:**

Explanation:

Role3:

- ☒ Role1 only
- ☐ Built-in Azure AD roles only
- ☐ Role1 and built-in Azure AD roles only
- ☐ Role1, built-in Azure AD roles, and built-in Azure subscription roles

Role4:

- ☐ Role2 only
- ☐ Built-in Azure AD roles only
- ☒ Role2 and built-in Azure subscription roles only
- ☐ Role2, built-in Azure subscription roles, and built-in Azure AD roles

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/roles/custom-create>

<https://docs.microsoft.com/en-us/azure/role-based-access-control/custom-roles-portal>

### NEW QUESTION # 315

You have an Azure subscription named Sub1 that contains the storage accounts shown in the following table The storage3 storage account is encrypted by using customer-managed keys.

YOU need to enable Microsoft Defender for storage to meet the following requirements.

- \* The storage1 and storage2 account must be include in the defender for storage requirement.
- \* The storage3 account must be exclude from the Defender for Storage protections.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and them in the correct order.

**Answer:**

**Explanation:**

**Actions**  

For storage3, disable the customer-managed keys.

Disable Defender for Storage for storage3.

**Answer Area**  

1 Enable the Defender for Storage plan for Sub1.

2 For storage3, assign the AzDefenderPlanAutoEnable tag and set the value to off.

3 Enable the Defender for Storage plan for RG1.

### NEW QUESTION # 316

You have an Azure Active Directory (Azure AD) tenant that contains the resources shown in the following table.

Name	Type
User1	User
User2	User
User3	User
Group1	Security group
Group2	Security group
App1	Enterprise application

User2 is the owner of Group2.

The user and group settings for App1 are configured as shown in the following exhibit.

+

 Add user
 Edit
 Remove
 Update Credentials
 Columns
 Got feedback?

The application will appear on the access panel for assigned users. Set 'visible to users?' to no in properties to prevent this. →

First 100 shown, to search all users & groups, enter a display name.

DISPLAY NAME	OBJECT TYPE	ROLE ASSIGNED
Group1	Group	Default Access

You enable self-service application access for App1 as shown in the following exhibit.

Allow users to request access to this application? ⓘ

☒ Yes ☐ No

To which group should assigned users be added? ⓘ

Select group

Group2

Require approval before granting access to this application? ⓘ

☒ Yes ☐ No

Who is allowed to approve access to this application? ⓘ

Select approvers

1 users selected

To which role should users be assigned in this application? ⓘ

\*Select a role

Default Access

User3 is configured to approve access to Appl.

You need to identify the owners of Group2 and the users of Appl.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Group2 owners:

<input type="checkbox"/>	User2 only
<input type="checkbox"/>	User3 only
<input type="checkbox"/>	User1 and User2 only
<input type="checkbox"/>	User2 and User3 only
<input type="checkbox"/>	User1, User2, and User3

App1 users:

<input type="checkbox"/>	Group1 members only
<input type="checkbox"/>	Group2 members only
<input type="checkbox"/>	Group1 and Group2 members only
<input type="checkbox"/>	Group1 and Group2 members and User1 only
<input type="checkbox"/>	Group1 and Group2 members, User1, and User3 only

**Answer:**

Explanation:

Group2 owners:  ▼

- User2 only
- User3 only
- User1 and User2 only
- User2 and User3 only
- User1, User2, and User3

App1 users: ▼

- Group1 members only
- Group2 members only
- Group1 and Group2 members only
- Group1 and Group2 members and User1 only
- Group1 and Group2 members, User1, and User3 only

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/manage-self-service-access>

### NEW QUESTION # 317

You plan to use Azure Sentinel to create an analytic rule that will detect suspicious threats and automate responses. Which components are required for the rule? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Detect suspicious threats: ▼

- A Kusto query language query
- A Transact-SQL query
- An Azure PowerShell query
- An Azure Sentinel playbook

Automate responses: ▼

- An Azure Functions app
- An Azure PowerShell script
- An Azure Sentinel playbook
- An Azure Sentinel workbook

Answer:

Explanation:

Detect suspicious threats: ▼

- A Kusto query language query
- A Transact-SQL query
- An Azure PowerShell query
- An Azure Sentinel playbook

Automate responses: ▼

- An Azure Functions app
- An Azure PowerShell script
- An Azure Sentinel playbook
- An Azure Sentinel workbook

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/tutorial-detect-threats-custom>

<https://docs.microsoft.com/en-us/azure/sentinel/tutorial-respond-threats-playbook>

### NEW QUESTION # 318

You suspect that users are attempting to sign in to resources to which they have no access.

You need to create an Azure Log Analytics query to identify failed user sign-in attempts from the last three days. The results must only show users who had more than five failed sign-in attempts.

How should you configure the query? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```
let timeframe = 3d;
SecurityEvent
| where TimeGenerated > ago(3d)
| where AccountType == 'User' and
```

▼

==4625

ActivityID
DataType
EventID
QuantityUnit

```
Summarize failed_login_attempts=
```

▼

Count(),
Countif(),
Makeset(),
Split(),

```
latest_failed_login=arg_max(TimeGenerated by Account
where failed_login_attempts > 5
```

**Answer:**

Explanation:

```
let timeframe = 3d;
SecurityEvent
| where TimeGenerated > ago(3d)
| where AccountType == 'User' and
```

▼

==4625

ActivityID
DataType
EventID
QuantityUnit

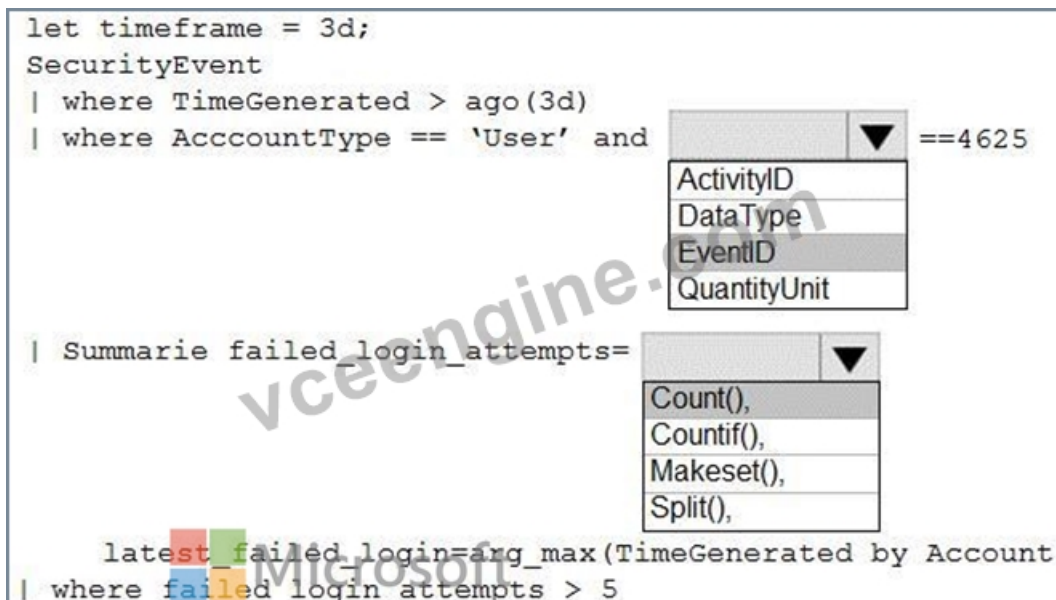

```
Summarize failed_login_attempts=
```

▼

Count(),
Countif(),
Makeset(),
Split(),

```
latest_failed_login=arg_max(TimeGenerated by Account
where failed_login_attempts > 5
```

Explanation

The following example identifies user accounts that failed to log in more than five times in the last day, and when they last attempted to log in.

```
let timeframe = 1d;
SecurityEvent
| where TimeGenerated > ago(1d)
| where AccountType == 'User' and EventID == 4625 // 4625 - failed log in
| summarize failed_login_attempts=count(), latest_failed_login=arg_max(TimeGenerated, Account) by Account
| where failed_login_attempts > 5
| project-away Account1
```
