NEW QUESTION # 87 Managing Assets Under Risk

They can also be tolerated and monitored.

NEW QUESTION # 87 Managing Assets Under Risk

The legal principle of respondeat superior means which of the following documents are TRUE? Select two.

- A It is not possible to insure your supplier's factory
- B It is possible to insure someone else's factory
- C It is not possible to insure someone else's factory
- D It is possible to insure your supplier's factory

Answer: C,D

Explanation: Explanation

In certain situations it means that if it is not possible to insure someone else's factory. The only place you can insure is your own. You can only take out insurance where you have a legal partial ownership of that asset. Therefore option 3 is also correct as you have a partial right of something were to happen to your supplier's factory. You can take out CGL insurance for this. See p. 109-110 for further explanation of Legal Principles of Insurance

NEW QUESTION # 88 Managing Assets Under Risk

In an organization, who is responsible for creating a risk action plan or register?

- A Cross Functional Team
- B the CEO Manager / HR Manager
- C Project Manager
- D Procurement Manager

Answer: A

Explanation: Explanation

A Cross Functional Team should create a risk register. It should not be the responsibility of one person to do this. Many points of view will lead to more risks being identified. Accountability for the Risk Register may however sit with the CEO or a Requirements Manager. This is explained on p. 312

The operation of the AP-219 Study Guide is extremely smooth because the system we design has strong compatibility with your computers.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q97-Q102):

NEW QUESTION # 97

When a new PaymentSummary is created, an email should be sent to the owner of the associated account and an approval after review should be required. What three steps should the administrator do to implement this functionality?

- A. Create a trigger flow when the payment summary is created with an email flow node
- B. Create an approval process on the Payment Summary object
- C. Create an email template
- D. Create a flow to send an email to the owner of the associated account when a payment summary is created
- E. Create an email alert action

Answer: B,C,E

Explanation:

Three steps that the administrator should do to implement this functionality are:

Create an email template. An email template is a reusable message that contains merge fields that are populated with data from records when the email is sent. The administrator can create an email template for the Payment Summary object that includes information such as the payment amount, date, status, etc.

Create an email alert action. An email alert action is a type of action that sends an email to one or more recipients when a flow executes. The administrator can create an email alert action that uses the email template created in the previous step and sends it to the owner of the associated account when a new Payment Summary is created.

Create an approval process on the Payment Summary object. An approval process is a way to automate the approval of records based on certain criteria and actions. The administrator can create an approval process on the Payment Summary object that requires an approval after review from a designated approver.

NEW QUESTION # 98

An admin is observing a flow and needs to watch all of the variables changing as the process executes, but nothing like this is being displayed. What did the developer forget to enable?

- A. Show execution details
- B. Show execution details inline
- C. Show the details of what's executed and render flow in Lightning Runtime
- D. Show the details of what's executed and render flow in Lightning Experience

Answer: C

NEW QUESTION # 99

Which three options are the main types of building blocks when working in Flow Builder?

- A. Connectors
- B. Elements

- C. Data lookups
- D. Resources
- E. Async processes

Answer: A,B,D

Explanation:

The main types of building blocks when working in Flow Builder are:

Elements: These are the components that define the logic and functionality of a flow. Elements include actions, assignments, decisions, loops, screens, subflows, and waits.

Resources: These are the variables, constants, formulas, collections, and record choice sets that store data in a flow. Resources can be used as inputs or outputs for elements.

Connectors: These are the arrows that connect elements and resources in a flow. Connectors determine the sequence and direction of the flow execution. Reference: [Flow Building Blocks]
