ISTQB CT-UT Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Basic Concepts: This section measures the skills of Usability Analysts and covers fundamental definitions and ideas related to usability, user experience, and accessibility. It explains what usability means in terms of effectiveness, efficiency, and satisfaction within software products. User experience concepts related to emotions, perceptions, and responses before, during, and after use are included. It also addresses accessibility, focusing on usage by people with diverse abilities.
Thema 2	• Usability Testing: This section measures the practical knowledge of Usability Testers in planning, conducting, analyzing, and reporting formal usability test sessions with users. It outlines test preparation activities including writing test plans, test scripts, and tasks, as well as considerations for test locations and pilot sessions. It explains how to moderate sessions, analyze findings, classify problems by severity, and communicate results effectively to stakeholders.
Thema 3	• Usability and Accessibility Standards: This part addresses the knowledge required by Compliance Officers regarding standards and guidelines that govern usability and accessibility. It introduces ISO standards like ISO 9241-110 and ISO 9241-171, manufacturer guidelines from major platforms, and web accessibility guidelines such as WCAG. It also touches on legislation relevant to accessibility requirements, such as the UK Equality Act and the Americans with Disabilities Act.
Thema 4	• User Surveys: This part assesses the ability of Usability Test Analysts to design and use surveys to gather user feedback on software usability. It describes how to prepare user surveys, select appropriate questionnaires, and analyze survey responses to measure user satisfaction and other quality attributes from the user's perspective.

CT-UT Zertifizierungsfragen, CT-UT Fragen Und Antworten

Die neuesten Schulungsunterlagen zur ISTQB CT-UT (ISTQB Certified Tester Usability Tester) Zertifizierungsprüfung von Fast2test sind von den Expertenteams bearbeitet, die vielen beim Verwirklichen ihres Traums verhelfen. In der konkurrenzfähigen Gesellschaft muss man die Fachleute seine eigenen Kenntnisse und Technikniveau unter Beweis stellen, um seine Position zu verstärken. Durch die ISTQB CT-UT Zertifizierungsprüfung kann man seine Fähigkeiten beweisen. Mit dem ISTQB CT-UT Zertifikat werden große Veränderungen in Ihrer Arbeit stattfinden. Ihr Gehalt wird erhöht und Sie werden sicher befördert.

ISTQB Certified Tester Usability Tester CT-UT Prüfungsfragen mit Lösungen (Q17-Q22):

17. Frage

Which of the following are advantages of using a usability lab?

- i. The context is natural
 - ii. Test sessions are easy to observe
 - iii. Inexpensive setup
 - iv. Similar conditions for all sessions
 - v. Easy recording of sessions
- A. ii & iv are true, i, iii & v are false
 - B. i, ii & v are true, iii & iv are false
 - C. ii, iv & v are true, i & iii are false
 - D. iii, iv & v are true, i & ii are false

Antwort: C

Begründung:

Usability labs provide a controlled environment that offers several advantages for observing and recording usability test sessions. Specifically, they allow for easy observation of participants (ii), standardized conditions for each session (iv), and facilitate audio and video recording for detailed analysis (v). However, the context is not natural (i), because the lab is an artificial setting rather than the user's actual environment.

Also, setting up a professional usability lab is not inexpensive (iii); it typically involves significant costs for equipment, space, and staffing. Therefore, options ii, iv, and v are true, while i and iii are false.

18. Frage

What does the Equality Act address?

- A. It protects people from discrimination in the workplace and in wider society
- B. It states that websites have to adhere to the WCAG conformity level A
- C. It states that websites have to adhere to the WCAG conformity level AA
- D. It obligates organizations to make sites accessible at all costs

Antwort: A

Begründung:

The Equality Act 2010 (UK) is legislation designed to protect individuals from discrimination in various areas, including employment and access to goods and services-this includes digital products like websites.

While it does not directly mandate WCAG compliance levels (A or AA), it implies that digital services must be accessible to users with disabilities. Organizations are required to make "reasonable adjustments" to avoid discrimination. Therefore, the most accurate and comprehensive answer is B.

19. Frage

You're conducting a user survey and you have reached the third stage, selecting an appropriate questionnaire. You have decided to use a standardized questionnaire as you want to benchmark against previous usability measurements. Which of the following user questionnaires allow benchmarking against previous usability measurements?

- i. SUS
- ii. SUMI
- iii. WAMMI

- A. i, ii and iii are true
- B. i & ii are true, iii is false
- C. ii & iii are true, i is false
- D. i is true, ii & iii are false

Antwort: A

Begründung:

SUS (System Usability Scale), SUMI (Software Usability Measurement Inventory), and WAMMI (Website Analysis and Measurement Inventory) are all validated, standardized usability questionnaires that support benchmarking. They allow comparison against known usability scores from a wide variety of systems. These instruments provide numeric scores that can be interpreted using benchmark datasets or industry standards.

Therefore, all three-i, ii, and iii-are true, making D the correct answer.

20. Frage

Which of these basic approaches to a software development project follows all key elements of human- centered evaluation?

- A. Iteratively develop prototypes, perform expert reviews, and integrate found issues
- B. Define requirements, develop the software, and perform acceptance test
- C. Interview users, develop the software, and perform acceptance test
- D. Interview users, iteratively develop prototypes, and evaluate the software

Antwort: D

Begründung:

Human-centered design, as defined by ISO 9241-210, emphasizes early user involvement, iterative design, and continuous usability evaluation. Option D aligns with this model as it begins with understanding user needs (interview users), proceeds through iterative prototyping (which allows for continuous improvement), and involves user evaluation. This ensures that the final product is shaped by real user input and feedback.

Options A and B lack iteration and continuous evaluation, while option C, although partially aligned, lacks explicit user involvement in the evaluation process, focusing only on expert reviews.

21. Frage

Which of the following is a key activity in a usability test session?

- A. Test the set up and modify the test script if needed
- B. Talk to the participant during the completion of a task
- C. Extract usability findings and recommendations
- D. Moderate the usability test

Antwort: D

Moderating the usability test is a core activity during the actual usability test session. The moderator guides participants through tasks, ensures the session stays on track, and avoids introducing bias. Option A (testing the setup) happens before the session, during preparation. Option C (extracting findings) occurs during analysis, after the test. Option D (talking during task execution) should be minimized unless necessary, to avoid influencing user behavior. Therefore, option B is the only correct answer aligned with best practices in usability testing.
