2026 Test NS0-185 Dumps | High Hit-Rate 100% Free 100% NetApp Storage Installation Engineer, ONTAP Professional Exam Correct Answers

Dear, hurry up to get the 100% pass NS0-185 exam study dumps for your preparation. You will get original questions and verified answers for the Network Appliance certification. After purchase of the NS0-185 exam dumps, you can instant download the NS0-185 practice torrent and start your study with no time wasted. The validity and useful NS0-185 will clear your doubts which will be in the actual test. When you prepare well with our NS0-185 pdf cram, the 100% pass will be easy thing.

Are you still worried about the actuality and the accuracy of the NS0-185 exam cram? If you choose us, there is no necessary for you to worry about this problem, because we have the skilled specialists to compile as well check the NS0-185 Exam Cram, which can ensure the right answer and the accuracy. The pass rate is 98%, if you have any other questions about the NS0-185 dumps after buying, you can also contact the service stuff.

Valid NS0-185 Exam Questions That Have Been Tried and True

You can also become part of this skilled and qualified community. To do this just enroll in the NS0-185 certification exam and start preparation with real and valid NetApp Storage Installation Engineer, ONTAP Professional Exam (NS0-185) exam practice test questions right now. The ITdumpsfree Network Appliance NS0-185 Exam Practice test questions are checked and verified by experienced and qualified NS0-185 exam trainers. So you can trust ITdumpsfree Network Appliance NS0-185 exam practice test questions and start preparation with confidence.

Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q55-Q60):

NEW QUESTION # 55
Which license is required to enable storage failover?

- A. SFO

- B. no license is required
- C. LC
- D. CFO

Answer: B

Explanation:
Storage failover is acore ONTAP featureand does not require a separate license. As long as the hardware supports HA and the system is properly cabled and configured, storage failover is available by default.
Therefore,no license is required.

NEW QUESTION # 56
You are setting up a peer relationship between two ONTAP clusters.
In this scenario, which two statements are true regarding authentication? (Choose two.)

- A. Peering authentication is required before enabling peering encryption.
- B. Peering authentication status can be verified with the cluster peer show command.
- C. Peering authentication can be configured using LDAP users and groups.
- D. Peering authentication can use an ONTAP generated passphrase.

Answer: B,D

Explanation:
Explanation (250-350 words):
Cluster peering authentication is a foundational ONTAP SAN concept that ensures secure trust between clusters before data replication can occur. Authentication is performed during the peering process and establishes mutual trust.
ONTAP supportspassphrase-based authentication, where a passphrase is either user-defined or automatically generated by ONTAP. This passphrase is exchanged between clusters to authenticate the peer relationship. LDAP is not used for cluster peering authentication.
Administrators can verify the authentication and status of cluster peering relationships using thecluster peer showcommand, which displays peer state, availability, and authentication status.
Peering encryption can be enabled independently and does not require authentication to be completed first, making option C incorrect.
Therefore, the correct answers areA and D.

NEW QUESTION # 57
You need to create a configuration spreadsheet template for a new ONTAP 9.8 deployment.
Which NetApp tool should you use?

- A. Interoperability Matrix Tool
- B. Active IQ Config Advisor
- C. ConfigBuilder
- D. Active IQ Unified Manager

Answer: C

NEW QUESTION # 58
You are asked to install six shelves to a production cluster. The cluster is running clustered Data ONTAP and is a 4-node cluster.
All six shelves will be cabled to the same HA pair. The customer wants you to assign all the new disks to a single node in the cluster.
Which three tools would help you accomplish this task? (Choose three.)

- A. the Config Advisor application
- B. the My AutoSupport Web-based tool
- C. the Synergy application
- D. the Hardware Universe Web-based tool
- E. the System Setup application

Answer: A,C,D

Explanation:
Installing and assigning new disk shelves in a production ONTAP cluster requires careful planning and validation. Three NetApp tools directly support this task.
TheHardware Universeprovides authoritative hardware compatibility and cabling guidance. It confirms which shelves, disk types, and cabling methods are supported for the specific controller platform and HA configuration.
TheSynergy applicationis used during installation to generate structured workflows, configuration guidance, and documentation that assist with shelf installation and disk assignment planning.
Config Advisoris essential after installation to validate shelf cabling, disk visibility, ownership, and HA pathing. It detects misconfigurations that could prevent proper disk assignment or create unsupported states.
My AutoSupport is used for telemetry and case management, not installation tasks. System Setup is used for initial cluster creation, not advanced shelf assignment planning.
Thus, the correct tools areA, B, and C.

NEW QUESTION # 59
What are two ONTAP storage efficiency technologies that would be used on an AFF A400 cluster? (Choose two.)

- A. FlashCache
- B. FlexClone volumes
- C. Flash Pool
- D. thin provisioning

Answer: B,D

Explanation:
AFF systems are all-flash platforms that rely heavily onsoftware-based efficiency technologiesbuilt into ONTAP. Two such technologies areFlexClone volumesandthin provisioning.
FlexCloneenables instant, space-efficient copies of volumes or files without duplicating data blocks. This is especially useful for testing, development, backups, and rapid provisioning scenarios. On AFF systems, FlexClone operations are nearly instantaneous and incur minimal overhead.
Thin provisioningallows logical storage to be allocated without immediately consuming physical capacity.
This ensures maximum utilization of flash storage and prevents over-provisioning, which is critical in all- flash environments.
Flash Pool and FlashCache are hybrid-storage technologies and are not applicable to AFF A400 systems, which do not use HDDs or PCIe read-cache modules.
Therefore, the correct answers areB and D.

NEW QUESTION # 60
......

In the past few years, NS0-185 study materials have helped countless candidates pass the NS0-185 exam, We will do our utmost to cater your needs, Life is not a cozy screen but a marathon full of changes Test NS0-185 Dumps and challenges, so it is our duty and destiny to conquer all sorts of challenges emerged in it.

Convenient for reading.
