## Salesforce Platform Developer I (PDI) Sample Questions (Q17-Q22):

### NEW QUESTION # 17

A developer created a custom order management app that uses an Apex class. The order is represented by an Order object and an OrderItem object that has a master-detail relationship to Order. During order processing, an order may be split into multiple orders. What should a developer do to allow their code to move some existing OrderItem records to a new Order record?

- A. Create a junction object between OrderItem and Order.
- B. Change the master-detail relationship to an external lookup relationship.
- **C. Select the Allow reparenting option on the master-detail relationship.**
- D. Add without sharing to the Apex class declaration.

**Answer: C**

Explanation:

To allow moving existing OrderItem records to a new Order record in a master-detail relationship:

Option B: Select the Allow reparenting option on the master-detail relationship.

Steps:

Go to the master-detail field on OrderItem.

Edit the field and select "Allow reparenting".

Reference:

"To allow reparenting of the detail records, select 'Allow reparenting' in the master-detail relationship field definition."

- Salesforce Help: Define Master-Detail Relationships

Why Other Options Are Incorrect:

Option A: A junction object is unnecessary since the relationship already exists.

Option C: Changing to an external lookup would not solve the problem and may introduce issues.

Option D: Adding without sharing does not affect the ability to reparent records in a master-detail relationship.

### NEW QUESTION # 18

A developer must provide custom user interfaces when users edit a Contact in either Salesforce Classic or Lightning Experience. What should the developer use to override the Contact's Edit button and provide this functionality?

- A. A Visualforce page in Salesforce Classic and a Lightning component in Lightning Experience
- B. A Lightning component in Salesforce Classic and a Lightning component in Lightning Experience
- C. A Visualforce page in Salesforce Classic and a Lightning page in Lightning Experience
- D. A Lightning page in Salesforce Classic and a Visualforce page in Lightning Experience

**Answer: A**

Explanation:

To override the Edit button in both Salesforce Classic and Lightning Experience:

\* Use a Visualforce page for Salesforce Classic.

\* Use a Lightning component for Lightning Experience by configuring the Lightning override.

### NEW QUESTION # 19

A developer needs to join data received from an integration with an external system with parent records in Salesforce. The data set does not contain the Salesforce IDs of the parent records, but it does have a foreign key attribute that can be used to identify the parent.

Which action will allow the developer to relate records in the data model without knowing the Salesforce ID?

- A. Create a custom field on the child object of type External Relationship.
- B. Create and populate a custom field on the parent object marked as Unique
- C. Create a custom field on the child object of type Foreign Key
- D. Create and populate a custom field on the parent object marked as an External ID.

**Answer: D**

### NEW QUESTION # 20

How should a developer write unit tests for a private method in an Apex class?

- A. Add a test method in the Apex class,
- B. Mark the Apex class as global.
- C. Use the SeeAllData annotation.
- D. Use the `@TestVisible` annotation.

**Answer: D**

Explanation:

To write unit tests for a private method in an Apex class:

Option C: Use the `@TestVisible` annotation.

Example:

```
public class MyClass {
    @TestVisible
    private static void myPrivateMethod() {
        // Implementation
    }
}
```

```
}  
}  
}
```

Reference:

"Use the `@TestVisible` annotation to allow test methods to access private or protected members of another class outside the test class."

- Apex Developer Guide: The `@TestVisible` Annotation

Why Other Options Are Incorrect:

Option A: You cannot add test methods inside a non-test Apex class. Test methods must be in a test class annotated with `@IsTest`.

Option B: Using `SeeAllData=true` allows access to organization data but does not affect the visibility of private methods.

Option D: Marking the Apex class as global changes its access modifier but does not expose private methods to test methods.

### NEW QUESTION # 21

An Apex method, `getAccounts`, that returns a list of `Accounts` given a `searchTerm`, is available for Lightning Web Components to use.

What is the correct definition of a Lightning Web Component property that uses the `getAccounts` method?
