EMC Dell PowerEdge Foundations v2 Exam Sample Questions (Q92-Q97):

NEW QUESTION # 92

A system administrator notices that a client system cannot access the Internet. The IP address is 169.254.10.26. The client system is correctly wired. Which server role should the administrator investigate?

- A. PROXY
- B. TCP/IP
- C. SNMP
- **D. DHCP**

Answer: D

NEW QUESTION # 93

A company is deploying security best practices and regulations. They are looking for a solution that prevents access to the data on storage media that may have failed. Which process will meet these requirements?

- A. Data deletion
- **B. Media sanitization**
- C. Deduplication
- D. Media formatting

Answer: B

NEW QUESTION # 94

In a hot aisle/cold aisle data center layout, where is the hot air exhausted from server racks primarily directed?

- A. Recirculated within the server rack for preheating
- B. Exhausted directly out of the data center building
- **C. Routed to the air handling system for cooling**
- D. Vented directly into the cold aisle for mixing

Answer: C

Explanation:

In a hot aisle/cold aisle layout, hot air exhausted from PowerEdge server racks is primarily directed to the air handling system (e.g., CRAC units) for cooling and recirculation. This design prevents hot air from mixing with cold air, maintaining efficient cooling. Recirculating within racks or venting to the cold aisle would reduce efficiency, and direct exhaust outside is impractical. Exact extract: "Explain the cooling and thermal considerations in PowerEdge Servers (Direct Liquid Cooling, Immersion Cooling, Air Cooling)... Describe maintenance functions, shutdowns, reboots of a PowerEdge Server." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Maintenance (18%).

NEW QUESTION # 95

An IT team wants to quickly upgrade the network bandwidth of their PowerEdge servers while also adding extra management ports like VGA and serial connectors. Which strategy offers a combination of network upgradeability and enhanced management ports using onboard card options?

- A. Use only a high-end RIO card that integrates all functions.
- **B. Install an OCP card for network speed and add a RIO card for management ports.**
- C. Upgrade LOM to a higher speed and add a separate PCIe NIC.
- D. Replace LOM and use only RIO for network and management.

Answer: B

Explanation:

Installing an Open Compute Project (OCP) card upgrades network bandwidth without using PCIe slots, while a Rear Input Output (RIO) card adds management ports like VGA and serial. This combination provides flexibility and conserves expansion options. Replacing LOM limits options; high-end RIO may not cover network upgrades; upgrading LOM with PCIe NIC consumes slots. This strategy enhances connectivity in PowerEdge servers. Exact extract: "Compare the on-board network on a PowerEdge Server... Describe the cables and connections." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Server Networking and Connectivity (6%).

NEW QUESTION # 96

A system administrator wants to implement software RAID on a new PowerEdge server to save costs. Which configuration option allows a system board's integrated SATA port to be used for RAID implementations?

- **A. SATA port can be configured for either SATA controller or software RAID**
- B. SATA port is exclusively for hardware RAID controllers
- C. SATA port can only be used for non-RAID configurations
- D. SATA port cannot be used for any RAID configuration

Answer: A
