Thus, the residents of the USA will have to pay \$120 for taking 010-160. To schedule this exam, you must register with the Pearson VUE website and choose whether to take such a test online or in a testing center.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q73-Q78):

NEW QUESTION # 73

Which of the following devices represents a hard disk partition?

- A. /dev/sda/p2

- B. /dev/ttyS0
- C. /dev/part0
- **D. /dev/sda2**
- E. /dev/sata0

Answer: D

Explanation:

Section: (none)

The correct device name that represents a hard disk partition is /dev/sda2. This device name follows the Linux convention for naming hard disk devices and partitions. According to this convention¹²³:

The first part of the device name indicates the type of the device. For example, /dev/hd* for IDE drives, /dev/sd* for SCSI, SATA, USB, or eSATA drives, /dev/nvme* for NVMe drives, etc.

The second part of the device name indicates the order of the device as detected by the system. For example, /dev/sda is the first serial drive, /dev/sdb is the second serial drive, and so on.

The third part of the device name indicates the number of the partition on the device. For example, /dev/sda1 is the first partition on the first serial drive, /dev/sda2 is the second partition on the first serial drive, and so on.

Therefore, /dev/sda2 means the second partition on the first serial drive, which is a valid hard disk partition. The other options are not valid hard disk partitions, because they do not follow the Linux convention. For example:

/dev/ttyS0 is a serial port device, not a hard disk device⁴.

/dev/sata0 is not a valid device name, because it does not specify the partition number. It should be something like /dev/sata0p1 or /dev/sata0p2, etc.

/dev/part0 is not a valid device name, because it does not specify the device type or the partition number. It should be something like /dev/sdXp0 or /dev/hdXp0, etc.

/dev/sda/p2 is not a valid device name, because it uses a slash (/) instead of a number to indicate the partition. It should be something like /dev/sda2 or /dev/sda3, etc.

NEW QUESTION # 74

Which of the following commands shows the absolute path to the current working directory?

- A. cd ..
- B. who
- **C. pwd**
- D. cd ~/home
- E. ls -l

Answer: C

Explanation:

The command pwd stands for "print working directory". It will print the absolute path of the current working directory to the terminal. For example, if we are currently in the /home/user/directory, it will print out that exact path¹. The pwd command is useful for finding out where we are in the file system hierarchy and for verifying the location of files and directories².

The other options are not commands that show the absolute path to the current working directory. The who command shows the users who are currently logged in to the system³. The cd ... command changes the current working directory to the parent directory of the current one². The ls -l command lists the files and directories in the current working directory in a long format, which shows the permissions, ownership, size, date, and name of each file and directory². The cd ~/home command changes the current working directory to the /home directory under the user's home directory, which may or may not exist². Reference:
