NEW QUESTION # 35

You are creating a Story report on Job Classifications. You have configured the chart, table, and input control on the canvas, as displayed in the screenshot. How do you set the input control?

□

- **A. Configure it for Linked Analysis.**
- B. Enable Cascading Effects.
- C. Convert it to a Story Filter.
- D. Create the corresponding filter on each chart.

Answer: A

Explanation:

- * Linked Analysis
- * Configuring input controls for Linked Analysis allows interactions between components (charts, tables) on the same canvas, enabling filters to apply only to selected visuals.
- * Why This is Correct
- * In the scenario, the input control must affect only the charts and not the table. Linked Analysis ensures this targeted filtering behavior.
- * Why Other Options are Incorrect
- * B (Create Filters): Manually adding filters is redundant when Linked Analysis can automate the behavior.
- * C (Enable Cascading Effects): Cascading effects affect hierarchical filters but are unrelated to input control behavior here.
- * D (Convert to Story Filter): A Story Filter would apply globally, affecting all elements, which is not desired.
