Then when you finish browsing our web pages, you can directly come to the shopping cart page and submit your orders of the AZ-500 learning quiz. Our payment system will soon start to work. Then certain money will soon be deducted from your credit card to pay for the AZ-500 preparation questions. And we will send them to you in 5 to 10 minutes after your purchase.

Microsoft AZ-500 exam is a challenging certification test that requires candidates to have hands-on experience with Microsoft Azure security solutions. AZ-500 exam measures the candidate's knowledge of Azure security concepts, tools, and best practices. Microsoft Azure Security Technologies certification is recognized globally and is highly valued by employers. Earning the Microsoft AZ-500 Certification demonstrates one's commitment to cloud security and can open up new career opportunities in the IT industry.

Microsoft Azure Security Technologies Sample Questions (Q49-Q54):

NEW QUESTION # 49

You need to delegate the creation of RG2 and the management of permissions for RG1. Which users can perform each task? To answer select the appropriate options in the answer area. NOTE: Each correct selection is worth one point

Answer:

Explanation:

Explanation

Graphical user interface, text, application, chat or text message Description automatically generated

Box 1: Admin3 only

The Contributor role has the necessary write permissions to create the resource group.

Box 2: Admin4 only

You need Owner level access to be able to manage permissions. The Contributor role can do most things but cannot modify permissions on existing objects.

NEW QUESTION # 50

Your network contains an on-premises Active Directory domain named adatum.com that syncs to Azure Active Directory (Azure AD).

The Azure AD tenant contains the users shown in the following table.

You configure the Authentication methods - Password Protection settings for adatum.com as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-on-premises-deploy>

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad>

NEW QUESTION # 51

You have an Azure subscription.

You enable Azure Active Directory (Azure AD) Privileged Identity Management (PIM).

Your company's security policy for administrator accounts has the following conditions:

* The accounts must use multi-factor authentication (MFA).

* The accounts must use 20-character complex passwords.

* The passwords must be changed every 180 days.

* The accounts must be managed by using PIM.

You receive multiple alerts about administrators who have not changed their password during the last 90 days.

You need to minimize the number of generated alerts.

Which PIM alert should you modify?

- A. Administrators aren't using their privileged roles
- B. Potential stale accounts in a privileged role

- C. Roles are being assigned outside of Privileged Identity Management
- D. Roles don't require multi-factor authentication for activation

Answer: B

Explanation:

Section: [none]

Explanation/Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/privileged-identity-management/pim-how-to-configure-security-alerts?tabs=new>

NEW QUESTION # 52

You have an Azure subscription that contains the resources shown in the following table.

An IP address of 10.1.0.4 is assigned to VM5. VM5 does not have a public IP address.
VM5 has just in time (JIT) VM access configured as shown in the following exhibit.

You enable JIT VM access for VM5.

NSG1 has the inbound rules shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 53

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Subscription named Sub1.

You have an Azure Storage account named Sa1 in a resource group named RG1.

Users and applications access the blob service and the file service in Sa1 by using several shared access signatures (SASs) and stored access policies.

You discover that unauthorized users accessed both the file service and the blob service.

You need to revoke all access to Sa1.

Solution: You generate new SASs.

Does this meet the goal?

- **A. No**
- B. Yes

Answer: A

Explanation:

Instead you should create a new stored access policy.

To revoke a stored access policy, you can either delete it, or rename it by changing the signed identifier.

Changing the signed identifier breaks the associations between any existing signatures and the stored access policy. Deleting or renaming the stored access policy immediately affects all of the shared access signatures associated with it.
