Data Sheet: Data Loss Prevention

Symantec Data Loss Prevention for Storage

Discover, monitor, and protect sensitive data stored throughout your organization

The diagram illustrates the Symantec Data Loss Prevention for Storage architecture. It is divided into three main functional areas: Storage, Endpoint, and Network. The Storage area includes Network Discover, Data Insight Enterprise, and Network Protect. The Endpoint area includes Endpoint Discover and Endpoint Prevent. The Network area includes Network Monitor, Network Protect for Email, and Network Protect for Web. All these components are managed by a central Management Platform, which is part of the Symantec Data Loss Prevention Defense Platform.

Overview

Symantec™ Data Loss Prevention for Storage helps you find and protect sensitive information stored throughout your organization. The challenge entails finding information that can be stored almost anywhere and owned by almost anyone. Compounding the problem, unstructured data is growing at an annual rate of 60%. The full Data Loss Prevention for Storage solution taps three products, which discover stored confidential data throughout the enterprise; monitor the ownership and use of stored data; and protect sensitive data according to centrally administered policies. Data Loss Prevention for Storage products can be used individually or together as a complete solution to reduce the risk of data loss.

Discover stored data

Symantec™ Data Loss Prevention Network Discover finds sensitive data stored throughout the organization. It discovers sensitive data using one or more policy-based Symantec detection technologies:

Describe looks for data matching keywords, expressions or pattern or file type recognition.

Fingerprinting looks for exact matches of whole or partial files, usually in highly specific and centralized sources of data.

Learning looks for sensitive data using Symantec's exclusive Vector Machine Learning technology that develops detection policies based on sample documents such as

source code, confidential reports, legal contracts, and other sensitive data.

Network Discover recognizes over 330 file types. It can be configured to recognize any custom file type, and a content extraction API accommodates creation of plug-ins for extracting text from almost any file format.

Key features

- Scan essentially any data repository, including file servers, databases, and web sites. Comprehensive coverage means you get visibility of all sensitive data, so you can take measures to reduce the risk of data loss.
- When a sensitive file is found, a rich set of incident data is provided to the information security team about exposed confidential information, including file owner and location, file content, and file permissions.
- Fast and efficient scanning, with minimal impact on the network, is managed by scan filters, schedule windows, scan throttling, and incremental scanning.

How it works

- For compliance, the audit team was able to prepare for the Payment Card Industry Data Security Standard (PCI DSS) Qualified Security Assessor's audit by using Network Discover to automatically locate exposed cardholder data throughout the enterprise.
- For protecting business secrets, Network Discover automatically locates inappropriately exposed sensitive data throughout the enterprise so that it can be moved to a secure location.

Monitor stored data

Symantec™ Data Loss Prevention Data Insight Enterprise tracks network file usage and can tell you who owns the files stored on network file servers. It also tells you who is accessing sensitive files and how often the files are being accessed. Data Insight Enterprise provides valuable storage
