

100% Pass Juniper - Pass-Sure JN0-351 - Latest Enterprise Routing and Switching, Specialist (JNCIS-ENT) Examprep

BONUS!!! Download part of VCETorrent JN0-351 dumps for free: https://drive.google.com/open?id=11N1ba_yxD3yFfg7KR_RUIIO4HAnW_24x

Our JN0-351 desktop practice test software works after installation on Windows computers. The Enterprise Routing and Switching, Specialist (JNCIS-ENT) JN0-351 web-based practice exam has all the features of the desktop software, but it requires an active internet connection. If you are busy in your daily routine and cant manage a proper time to sit and prepare for the JN0-351 Certification test, our JN0-351 PDF questions file is ideal for you. You can open and use the JN0-351 Questions from any location at any time on your smartphones, tablets, and laptops. Questions in the Enterprise Routing and Switching, Specialist (JNCIS-ENT) JN0-351 PDF document are updated, and real.

Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • OSPF: The concepts and operational details of OSPF are explored, providing tools for routing efficiency. Configuration and troubleshooting mastery ensure readiness for both the exam and complex enterprise environments.
Topic 2	<ul style="list-style-type: none"> • BGP: This topic focuses on the operational and conceptual elements of BGP, a cornerstone in enterprise networks.
Topic 3	<ul style="list-style-type: none"> • Layer 2 Switching or VLANs: This topic deepens the understanding of Layer 2 switching operations within the Junos OS, including VLAN concepts and benefits. Experienced networking professionals gain insights into configuration, monitoring, and troubleshooting techniques essential for network segmentation and efficiency.
Topic 4	<ul style="list-style-type: none"> • Protocol Independent Routing: An essential domain for understanding routing components outside protocol dependencies, this topic enhances expertise in configuring, monitoring, and troubleshooting critical elements.
Topic 5	<ul style="list-style-type: none"> • High Availability: This topic covers the importance and application of high availability within Junos OS environments. Knowledge in configuring and managing these components is critical for ensuring robust and uninterrupted network operations, aligning with exam expectations.

Topic 6	<ul style="list-style-type: none"> • Layer 2 Security: This topic introduces Layer 2 protection mechanisms and firewall filters to fortify network security. Practical skills in configuring, monitoring, and troubleshooting these features prepare candidates to address exam objectives and real-world challenges effectively.
Topic 7	<ul style="list-style-type: none"> • Tunnels: The fundamentals of IP tunneling are emphasized, highlighting their requirements and functionalities. Mastery in configuring, monitoring, and troubleshooting tunnels equips professionals to meet the demands of the JN0-351 Exam.
Topic 8	<ul style="list-style-type: none"> • IS-IS: Aspiring Juniper networking professionals enhance their understanding of IS-IS routing protocols. This topic equips candidates with the knowledge to configure and monitor IS-IS systems, addressing specific exam challenges and practical applications.

New JN0-351 Exam Labs - New JN0-351 Exam Answers

You will receive JN0-351 exam materials immediately after your payment is successful, and then, you can use JN0-351 test guide to learn. Everyone knows that time is very important and hopes to learn efficiently, especially for those who have taken a lot of detours and wasted a lot of time. Once they discover JN0-351 study braindumps, they will definitely want to seize the time to learn. However, students often purchase materials from the Internet, who always encounters a problem that they have to waste several days of time on transportation, especially for those students who live in remote areas. But with JN0-351 Exam Materials, there is no way for you to waste time. The sooner you download and use JN0-351 study braindumps, the sooner you get the certificate.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q20-Q25):

NEW QUESTION # 20

When trying to commit the configuration shown in the exhibit, you receive an error. What is the problem?

- A. You have omitted the interface-mode accesscommand.
- B. You have not configured an IP address to the interface.
- C. You have omitted the interface-mode trunkcommand.
- D. You have not set the interface family correctly.

Answer: C

NEW QUESTION # 21

What is the default keepalive time for BGP?

- A. 60 seconds
- B. 30 seconds
- C. 10 seconds
- D. 90 seconds

Answer: A

Explanation:

Explanation

The default keepalive time for BGP is 60 seconds¹. The keepalive time is the interval at which BGP sends keepalive messages to maintain the connection with its peer¹. If the keepalive message is not received within the hold time, the connection is considered lost¹. By default, the hold time is three times the keepalive time, which is 180 seconds¹.

NEW QUESTION # 22

Referring to the output shown in the exhibit, which statement is correct?

- A. 11.0.0.102/32 is being per-flow load-balanced
- B. 11.0.0.102/32 is being per-packet load-balanced
- C. 11.0.0.108/32 is being per-flow load-balanced
- **D. 11.0.0.108/32 is being per-packet load-balanced**

Answer: D

NEW QUESTION # 23

You are troubleshooting an issue where traffic to 192.168.10.0/24 is being sent to R1 instead of your desired path through R2. Referring to the exhibit, what is the reason for the problem?

- A. R2's route is not the best path due to a lower origin code.
- **B. R1's route is the best path due to a higher local preference**
- C. R2's route is not the best path due to loop prevention.
- D. R1's route is the best path due to the shorter AS path.

Answer: B

Explanation:

The exhibit shows the output of the command `show ip bgp`, which displays information about the BGP routes in the routing table. The output shows two routes for the destination 192.168.10.0/24, one from R1 and one from R2.

The route from R1 has a local preference of 200, while the route from R2 has a local preference of 100. Local preference is a BGP attribute that indicates the degree of preference for a route within an autonomous system (AS). A higher local preference means a more preferred route.

BGP uses a best path selection algorithm to choose the best route for each destination among multiple paths. The algorithm compares different attributes of the routes in a specific order of precedence. The first attribute that is compared is weight, which is a Cisco-specific attribute that is local to the router. If the weight is equal or not set, the next attribute that is compared is local preference.

In this case, both routes have the same weight of 0, which means that they are learned from external BGP (eBGP) peers. Therefore, the next attribute that is compared is local preference.

Since R1's route has a higher local preference than R2's route, it is chosen as the best path and installed in the routing table. The other attributes, such as origin code and AS path, are not considered in this case.

NEW QUESTION # 24

You are asked to create a default route that will be advertised to your internal OSPF neighbors. You have three upstream connections to the Internet and you must ensure that when available, all traffic uses ISP1 as your primary connection and only uses ISP2 and ISP3 when ISP1 is not available.

Which solution should you implement in this scenario?

- A. Create a default generate route that includes an import policy to match BGP routes from ISP1 and assign a preference value of four or less.
- **B. Create a default static route with ISP1 's address as the next hop while specifying the addresses for ISP2 and ISP3 as qualified next hops with a preference value of six or higher.**
- C. Create a default static route with each neighbor address as the next hop.
- D. Create a default aggregated route.

Answer: B

Explanation:

The solution that should be implemented in this scenario is to create a default generate route that includes an import policy to match BGP routes from ISP1 and assign a preference value of four or less. This way, the default route will be advertised to the internal OSPF neighbors only when there is a BGP route from ISP1 in the routing table, and it will have a higher preference than any other default route from ISP2 or ISP3. If ISP1 is not available, the default generate route will be withdrawn and the traffic will use the next available default route from ISP2 or ISP3.

Option A is incorrect because creating a default static route with ISP1's address as the next hop while specifying the addresses for ISP2 and ISP3 as qualified next hops with a preference value of six or higher will not ensure that the default route is advertised to the internal OSPF neighbors only when ISP1 is available. The default static route will always be in the routing table regardless of the

availability of ISP1, and it will have a lower preference than any other default route from ISP2 or ISP3.

Option C is incorrect because creating a default static route with each neighbor address as the next hop will not ensure that all traffic uses ISP1 as the primary connection and only uses ISP2 and ISP3 when ISP1 is not available. The default static route will always be in the routing table regardless of the availability of ISP1, and it will load balance the traffic among the three ISPs.

Option D is incorrect because creating a default aggregated route will not ensure that the default route is advertised to the internal OSPF neighbors only when ISP1 is available. The default aggregated route will always be in the routing table regardless of the availability of ISP1, and it will not have any preference value associated with it. References:

NEW QUESTION # 25

.....

Our JN0-351 exam torrent has three versions which people can choose according to their actual needs. The vision of PDF is easy to download, so people can learn JN0-351 guide torrent anywhere if they have free time. People learn through fragmentation and deepen their understanding of knowledge through repeated learning. As for PC version, it can simulate real operation of test environment, users can test themselves in mock exam in limited time. This version of our JN0-351 exam torrent is applicable to windows system computer. Based on Web browser, the version of APP can be available as long as there is a browser device can be used. At the meantime, not only do JN0-351 Study Tool own a mock exam, and limited-time exam function, but also it has online error correction and other functions. The characteristic that three versions all have is that they have no limit of the number of users, so you don't encounter failures anytime you want to learn our JN0-351 guide torrent.
