Latest Google Exam Certification Cost–Pass-Sure Valid Associate-Cloud-Engineer Test Pattern

2026 Latest ExamDiscuss Associate-Cloud-Engineer PDF Dumps and Associate-Cloud-Engineer Exam Engine Free Share: https://drive.google.com/open?id=1FMxatm3UKQcrVyBFHOYndJOeCHTcf5l7

If you want to use our Associate-Cloud-Engineer simulating exam on your phone at any time, then APP version is your best choice as long as you have browsers on your phone. Of course, some candidates hope that they can experience the feeling of exam when they use the Associate-Cloud-Engineer learning engine every day. Then our PC version of our Associate-Cloud-Engineer Exam Questions can fully meet their needs only if their computers are equipped with windows system. As we face with phones and computers everyday, these two versions are really good.

Getting a certification is not only a certainty of your ability but also can improve your competitive force in the job market. Associate-Cloud-Engineer training materials are high-quality, and you can pass the exam by using them. In addition, we offer you free demo for you to have a try, so that you can have a deeper understanding of what you are going to buy. We are pass guarantee and money back guarantee, and if you fail to pass the exam by using Associate-Cloud-Engineer test materials of us, we will give you full refund. We have online and offline service, and if you have any questions for Associate-Cloud-Engineer exam dumps, you can contact us.

Associate-Cloud-Engineer valid study material | Associate-Cloud-Engineer valid dumps

The number of questions of the Associate-Cloud-Engineer preparation questions you have done has a great influence on your passing rate. And we update the content as well as the number of the Associate-Cloud-Engineer exam braindumps according to the exam center. As for our Associate-Cloud-Engineer Study Materials, we have prepared abundant exercises for you to do. You can take part in the real Associate-Cloud-Engineer exam after you have memorized all questions and answers accurately. And we promise that you will get a 100% pass guarantee.

Google Associate Cloud Engineer Exam Sample Questions (Q273-Q278):

NEW QUESTION # 273
Which of the following role provide granular access for a specific service and is managed by GCP?

- A. Predefined
- B. Custom
- C. Primitive
- D. Admin

Answer: A

NEW QUESTION # 274

Your company is moving its continuous integration and delivery (CI/CD) pipeline to Compute Engine instances. The pipeline will manage the entire cloud infrastructure through code. How can you ensure that the pipeline has appropriate permissions while your system is following security best practices?

- A. * Create multiple service accounts, one for each pipeline with the appropriate minimal Identity and Access Management (IAM) permissions.
  * Use a secret manager service to store the key files of the service accounts.
  * Allow the CI/CD pipeline to request the appropriate secrets during the execution of the pipeline.
- B. * Add a step for human approval to the CI/CD pipeline before the execution of the infrastructure provisioning.
  * Use the human approvals IAM account for the provisioning.
- C. * Attach a single service account to the compute instances.
  * Add minimal rights to the service account.
  * Allow the service account to impersonate a Cloud Identity user with elevated permissions to create, update, or delete resources.
- D. * Attach a single service account to the compute instances.
  * Add all required Identity and Access Management (IAM) permissions to this service account to create, update, or delete resources

Answer: C

Explanation:
The best option is to attach a single service account to the compute instances and add minimal rights to the service account. Then, allow the service account to impersonate a Cloud Identity user with elevated permissions to create, update, or delete resources. This way, the service account can use short-lived access tokens to authenticate to Google Cloud APIs without needing to manage service account keys. This option follows the principle of least privilege and reduces the risk of credential leakage and misuse.
Option A is not recommended because it requires human intervention, which can slow down the CI/CD pipeline and introduce human errors. Option C is not secure because it grants all required IAM permissions to a single service account, which can increase the impact of a compromised key. Option D is not cost-effective because it requires creating and managing multiple service accounts and keys, as well as using a secret manager service.

NEW QUESTION # 275
You have an application that uses Cloud Spanner as a backend database. The application has a very predictable traffic pattern. You want to automatically scale up or down the number of Spanner nodes depending on traffic. What should you do?

- A. Create a Stackdriver alerting policy to send an alert to webhook when Cloud Spanner CPU is over or under your threshold. Create a Cloud Function that listens to HTTP and resizes Spanner resources accordingly.
- B. Create a Stackdriver alerting policy to send an alert to Google Cloud Support email when Cloud Spanner CPU exceeds your threshold. Google support would scale resources up or down accordingly.
- C. Create a cron job that runs on a scheduled basis to review stackdriver monitoring metrics, and then resize the Spanner instance accordingly.
- D. Create a Stackdriver alerting policy to send an alert to oncall SRE emails when Cloud Spanner CPU exceeds the threshold. SREs would scale resources up or down accordingly.

Answer: A

Explanation:
Explanation
As to mexblood1's point, CPU utilization is a recommended proxy for traffic when it comes to Cloud Spanner.
See: Alerts for high CPU utilization The following table specifies our recommendations for maximum CPU usage for both single-region and multi-region instances. These numbers are to ensure that your instance has enough compute capacity to continue to serve your traffic in the event of the loss of an entire zone (for single-region instances) or an entire region (for multi-region instances). - https://cloud.google.com/spanner/docs/cpu-utilization

NEW QUESTION # 276
Your organization is a financial company that needs to store audit log files for 3 years. Your organization has hundreds of Google Cloud projects. You need to implement a cost-effective approach for log file retention.
What should you do?

- A. Write a custom script that uses logging API to copy the logs from Stackdriver logs to BigQuery.

- B. Export these logs to Cloud Pub/Sub and write a Cloud Dataflow pipeline to store logs to Cloud SQL.
- C. Create an export to the sink that saves logs from Cloud Audit to a Coldline Storage bucket.
- D. Create an export to the sink that saves logs from Cloud Audit to BigQuery.

Answer: C

Explanation:
Coldline Storage is the perfect service to store audit logs from all the projects and is very cost-efficient as well.
Coldline Storage is a very low-cost, highly durable storage service for storing infrequently accessed data.

NEW QUESTION # 277

Your company has workloads running on Compute Engine and on-premises. The Google Cloud Virtual Private Cloud (VPC) is connected to your WAN over a Virtual Private Network (VPN). You need to deploy a new Compute Engine instance and ensure that no public Internet traffic can be routed to it. What should you do?

- A. Create the instance with Private Google Access enabled.
- B. Create a deny-all egress firewall rule on the VPC network.
- C. Create a route on the VPC to route all traffic to the instance over the VPN tunnel.
- D. Create the instance without a public IP address.

Answer: A

Explanation:
Get private access to Google services, such as storage, big data, analytics, or machine learning, without having to give your service a public IP address.
