## Latest Valid C\_SEC\_2405 Vce - Pass C\_SEC\_2405 in One Time - Free PDF C\_SEC\_2405 Test Questions Fee

It is not hard to know that C\_SEC\_2405 study materials not only have better quality than any other study materials, but also have

more protection. On the one hand, we can guarantee that you will pass the exam easily if you learn our C\_SEC\_2405 study materials; on the other hand, once you didn't pass the exam for any reason, we guarantee that your property will not be lost. Our C\_SEC\_2405 Study Materials have a high quality which is mainly reflected in the pass rate. Our product can promise a higher pass rate than other study materials.

## SAP Certified Associate - Security Administrator Sample Questions (Q63-Q68):

### NEW QUESTION # 63

Which of the following services does the Identity Authentication Service provide? Note: There are 2 correct answers to this question.

- A. Policy refinement
- B. Authentication
- C. Central User Repository
- D. Single Sign-On

**Answer: B,D**

Explanation:

\* Context: Identity Authentication Service (IAS) supports secure user authentication and enables Single Sign-On (SSO) across systems.

\* Solution Descriptions:

\* Authentication: Verifies user credentials and identity.

\* Single Sign-On (SSO): Allows seamless login across SAP and third-party systems without requiring multiple authentications.

SAP Security References:

\* SAP Identity Authentication Service (IAS) Guide

\* SAP SSO Configuration Documentation

### NEW QUESTION # 64

What is required to centrally administer a user's master record using Central User Administration? Note:

There are 3 correct answers to this question.

- A. An ALE distribution model
- B. An entry in transaction BD54 for the child system
- C. An existing master record in the target client for the user
- D. An RFC destination to the target system
- E. An RFC destination to the target client

**Answer: A,B,E**

Explanation:

Central User Administration (CUA) in SAP enables centralized management of user master records across multiple systems. To implement CUA, an ALE (Application Link Enabling) distribution model is required to define the data exchange between the CUA master system and child systems, ensuring user data is consistently distributed. An RFC (Remote Function Call) destination to the target client is necessary to establish a secure communication channel for transmitting user data to specific clients in the child systems. Additionally, an entry in transaction BD54 (Logical Systems) for the child system is needed to define the child system as a logical system in the CUA landscape, enabling it to receive user data. An RFC destination to the target system (not client-specific) is less precise, and an existing master record in the target client is not required, as CUA creates or updates these records centrally. These components ensure that CUA operates effectively, streamlining user administration while maintaining security and consistency across SAP systems.

### NEW QUESTION # 65

What authorization object can be used to restrict which users a security administrator is authorized to maintain?

- A. S\_USER\_GRP
- B. S\_USER\_SASO
- C. S\_USER\_AUTO
- D. S\_USER\_GRD

**Answer: B**

#### **NEW QUESTION # 66**

What are some disadvantages of a Composite Role? Note: There are 2 correct answers to this question.

- A. Transactions that are deleted from the Composite Role menu are also removed from the included roles.
- **B. Changes to the authorizations can only be made using the included roles.**
- C. Menus from the included roles cannot be mixed.
- **D. Changes to the included roles are not immediately visible in the composite role menu, requiring a renewed import.**

**Answer: B,D**

Explanation:

Composite roles in SAP systems group multiple single roles to simplify user assignment, but they have notable disadvantages. One disadvantage is that changes to the included single roles, such as adding or removing transactions, are not immediately visible in the composite role's menu, requiring a renewed import to update the composite role's structure. This delay can lead to inconsistencies during role maintenance, complicating administration. Another disadvantage is that changes to authorizations within a composite role can only be made through the included single roles, as composite roles do not allow direct authorization maintenance. This restriction limits flexibility and requires administrators to modify each single role individually, increasing effort and potential for errors. Menus from included roles can be mixed in the composite role, making option B incorrect, and deleting transactions from the composite role menu does not affect the included roles, ruling out option D. These limitations highlight the need for careful planning when using composite roles to ensure efficient and secure role management.

#### **NEW QUESTION # 67**

Which levels of security protection are provided by Secure Network Communication (SNC)? Note: There are 3 correct answers to this question.

- **A. Integrity**
- B. Availability
- C. Authorization
- **D. Authentication**
- **E. Privacy**

**Answer: A,D,E**

#### **NEW QUESTION # 68**

.....

Do you want to pass the SAP C\_SEC\_2405 exam better and faster? Then please select the GetValidTest. It can help you achieve your dreams. GetValidTest is a website that provide accurate exam materials for people who want to participate in the IT certification. GetValidTest can help a lot of IT professionals to enhance their career blueprint. Our strength will make you incredible. You can try a part of the questions and answers about SAP C\_SEC\_2405 Exam to test our reliability.
