Free PDF Quiz Efficient Fortinet - NSE5_FSM-6.3 Exam Pattern

First and foremost, in order to cater to the different needs of people from different countries in the international market, we have prepared three kinds of versions of our NSE5_FSM-6.3 learning questions in this website. Second, we can assure you that you will get the latest version of our training materials for free from our company in the whole year after payment on NSE5_FSM-6.3 practice materials. Last but not least, we will provide the most considerate after sale service for our customers in twenty four hours a day seven days a week.

Fortinet NSE5_FSM-6.3 (Fortinet NSE 5 - FortiSIEM 6.3) certification exam is designed for Fortinet professionals seeking to gain expertise in FortiSIEM 6.3, a comprehensive security information and event management (SIEM) solution. NSE5_FSM-6.3 Exam assesses one's understanding of various security concepts, including security event management, security incident response, and compliance management.

Fortinet NSE 5 - FortiSIEM 6.3 Sample Questions (Q40-Q45):

NEW QUESTION # 40

Three events are collected over a 10-minute time period from two servers Server A and Server B. Based on the settings being used for the rule subpattern, how many incidents will the servers generate?

- A. Server A will not generate any incidents and Server B will not generate any incidents
- B. Server B will generate one incident and Server A will not generate any incidents
- C. Server A will generate one incident and Server B will not generate any incidents
- D. Server A will generate one incident and Server B will generate one incident

Answer: C

NEW QUESTION # 41

An administrator wants to search for events received from Linux and Windows agents. Which attribute should the administrator use in search filters, to view events received from agents only.

- A. External Event Receive Agents
- B. External Event Receive Protocol
- C. Event Received Proto Agents
- D. External Event Receive Raw Logs

Answer: A

Explanation:

Search Filters in FortiSIEM: When searching for specific events, administrators can use various attributes to filter the results. Attribute for Agent Events: To view events received specifically from Linux and Windows agents, the attribute External Event Receive Agents should be used.

* Function: This attribute filters events that are received from agents, distinguishing them from events received through other protocols or sources.

Search Efficiency: Using this attribute helps the administrator focus on events collected by FortiSIEM agents, making the search results more relevant and targeted.

References: FortiSIEM 6.3 User Guide, Event Search and Filters section, which describes the available attributes and their usage for filtering search results.

NEW QUESTION # 42

An administrator is using SNMP and WMI credentials to discover a Windows device. How will the WMI method handle this?

- A. WMI method will collect only DNS logs.
- B. WMI method will collect security, application, and system events logs.
- C. WMI method will collect only traffic and IIS logs.
- D. WMI method will collect only DHCP logs.

Answer: C

Explanation:

WMI Method: Windows Management Instrumentation (WMI) is a set of specifications from Microsoft for consolidating the management of devices and applications in a network.

Log Collection: WMI is used to collect various types of logs from Windows devices.

* Security Logs: Contains records of security-related events such as login attempts and resource access.

* Application Logs: Contains logs generated by applications running on the system.

* System Logs: Contains logs related to the operating system and its components.

Comprehensive Data Collection: By using WMI, FortiSIEM can gather a wide range of event logs that are crucial for monitoring and analyzing the security and performance of Windows devices.

References: FortiSIEM 6.3 User Guide, Data Collection Methods section, which details the use of WMI for collecting event logs from Windows devices.

NEW QUESTION # 43

Which item is required to register a FortiSIEM appliance license?

- A. Static MAC address
- B. Static storage
- C. Static Hardware ID
- D. Static IP address

Answer: C

NEW QUESTION # 44

Which process converts raw log data to structured data?

- A. Data parsing
- B. Data enrichment
- C. Data classification
- D. Data validation

Answer: A

Explanation:

Raw Log Data: When devices send logs to FortiSIEM, the data arrives in a raw, unstructured format.

Data Parsing Process: The process that converts this raw log data into a structured format is known as data parsing.

* Data Parsing: This involves extracting relevant fields from the raw log entries and organizing them into a structured format, making the data usable for analysis, reporting, and correlation.

Significance of Structured Data: Structured data is essential for effective event correlation, alerting, and generating meaningful reports.

References: FortiSIEM 6.3 User Guide, Data Parsing section, which details how raw log data is transformed into structured data through parsing.
