# **Intereactive OGEA-103 Testing Engine & Valid OGEA-103 Exam Sims**

DOWNLOAD the newest DumpsTorrent OGEA-103 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1jl-9j3cyr0CqudWCtiEzNRrU4jxc-iwz

As you see, all of the three versions are helpful for you to get the OGEA-103 certification: the PDF, Software and APP online. So there is another choice for you to purchase the comprehensive version which contains all the three formats, it is the Value Pack. Besides, the price for the Value Pack is quite favorable. And no matter which format of OGEA-103 study engine you choose, we will give you 24/7 online service and one year's free updates on the OGEA-103 practice questions.

The TOGAF framework is widely used in the industry and is considered a leading framework for enterprise architecture. It provides a clear and structured approach to building and managing enterprise architectures. This framework helps architects to align their organization's business goals and objectives with its IT strategy, while also helping to reduce costs and increase efficiency.

The OGEA-103 Certification Exam is an essential credential for enterprise architects, IT professionals, and business leaders who seek to improve their knowledge and skills in enterprise architecture. By passing this certification exam, candidates can demonstrate their proficiency in the TOGAF framework and prove their ability to develop and implement effective enterprise architecture solutions.

# **Quiz 2026 Newest The Open Group OGEA-103: Intereactive TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Testing Engine**

With the development of the times, the pace of the society is getting faster and faster. If we don't try to improve our value, we're likely to be eliminated by society. Under the circumstances, we must find ways to prove our abilities. For example, getting the OGEA-103 Certification is a good way. If we had it, the chances of getting a good job would be greatly improved. However, obtaining the OGEA-103 certification is not an easy task.

The Open Group OGEA-103 (TOGAF Enterprise Architecture Combined Part 1 and Part 2) Certification Exam is a comprehensive certification program designed by the Open Group for professionals who want to develop their skills and knowledge in enterprise architecture. OGEA-103 Exam is a combination of Part 1 and Part 2 of the TOGAF certification program, and it is designed to test the candidate's proficiency in the concepts, principles, and practices of enterprise architecture.

# The Open Group TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Sample Questions (Q93-Q98):

#### **NEW OUESTION #93**

Which of the following statements about architecture partitioning are correct\*?

- 1 Partitions are used to simplify the management of the Enterprise Architecture
- 2 Partitions are equivalent to architecture levels
- 3 Partitions enable different teams to work on different element of the architecture at the same time.

# 4 Partitions reflect the organization's structure

- A. 1 & 3
- B. 2 & 4
- C.1 & 4
- D. 2 & 3

#### Answer: A

#### Explanation:

Statements 1 and 3 about architecture partitioning are correct. Architecture partitioning is the technique of dividing an architecture into smaller and more manageable parts that can be developed, maintained, and governed independently. Partitions are used to simplify the management of the Enterprise Architecture and to enable different teams to work on different elements of the architecture at the same time. Partitions are not equivalent to architecture levels, which are different degrees of abstraction or detail in an architecture.

Partitions do not necessarily reflect the organization's structure, which may change over time or differ from the architecture's scope and boundaries. Reference: The TOGAF Standard | The Open Group Website, Section 2.5 Architecture Partitioning.

# **NEW QUESTION #94**

What does the TOGAF ADM recommend for use in developing an Architecture Vision document?

- A. Business Scenarios
- B. Requirements Management
- C. Gap Analysis
- D. Architecture Principles

#### Answer: A

#### Explanation:

Business scenarios are a technique recommended by the TOGAF ADM for use in developing an Architecture Vision document12. Business scenarios are a means of capturing the business requirements and drivers, the processes and actors involved, and the desired outcomes and measures of success34. Business scenarios help to create a common vision and understanding among the stakeholders, and to identify and validate the architecture requirements. Business scenarios also provide a basis for analyzing the impact and value of the proposed architecture.

#### **NEW OUESTION #95**

Consider the following statements:

- 1. Each contracted party is required to act responsibly to the organization and its stakeholders.
- 2. All decisions taken, processes used, and their implementation will not be allowed to create unfair advantage to any one particular party.
- 3. Digital Transformation and operations will be more effective and efficient.
- 4. Strategic decision-making by C-Level executives and business leaders will be more effective.

Which statements highlight the value and necessity for Architecture Governance to be adopted within organizations?

- A. 3and4
- B. 1and2
- C. 1and4
- D. 2and3

#### Answer: B

#### Explanation:

Architecture governance is the practice of ensuring compliance with the enterprise architecture and its principles, standards, and goals. Architecture governance provides the means to establish, monitor, and control the architecture development and implementation processes, and to resolve any issues or conflicts that may arise. Architecture governance also ensures that all stakeholders are represented and involved in the decision-making process, and that their interests and concerns are balanced and aligned. Statements 1 and 2 highlight the value and necessity for architecture governance to be adopted within organizations, as they emphasize the importance of responsibility, accountability, fairness, and transparency in the architectural activities. Statements 3 and 4 are more related to the benefits and outcomes of having a good enterprise architecture, rather than the governance aspect. The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 50: Architecture Governance: The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 29: Architecture Governance

# **NEW QUESTION #96**

Scenario

Your role is that of an Enterprise Architect, reporting to the Chief Enterprise Architect, at a technology company. The company uses the TOGAF standard as the method and guiding framework for its Enterprise Architecture (EA) practice. The Chief Technology Officer (CTO) is the sponsor of the activity. The EA practice uses an iterative approach for its architecture development. This has enabled the decision-makers to gain valuable insights into the different aspects of the business. The nature of the business is such that the data and the information stored on the company systems is the company's major asset and is highly confidential. The company employees travel a lot for work and need to communicate over public infrastructure. They use message encryption, secure internet connections using Virtual Private Networks (VPNs), and other standard security measures. The company has provided computer security awareness training for all its staff. However, despite good education and system security, there is still a need to rely on third-party suppliers for infrastructure and software.

The Chief Security Officer (CSO) has noted an increase in ransomware (malicious software used in ransom demands) attacks on companies with a similar profile. The CSO recognizes that no matter how much is spent on education and support, the company could be a victim of a significant attack that could completely lock them out of their important data.

A risk assessment has been completed, and the company has looked for cyber insurance that covers ransomware. The price for this insurance is very high. The CTO recently saw a survey that said 1 out of 4 businesses that paid ransoms could not get their data back, and almost the same number were able to recover the data without paying. The CTO has decided not to get cyber insurance to cover ransom payment.

You have been asked to describe the steps you would take to strengthen the current architecture to improve data protection. Based on the TOGAF standard, which of the following is the best answer?

- A. You would assess business continuity requirements and analyze the current Enterprise Architecture for gaps. You would
  recommend changes to address the situation and create a change request. You would engage the Architecture Board to
  assess and approve the change request. Once approved, you would create a new Request for Architecture Work to begin an
  ADM cycle to implement the changes.
- B. You would request an Architecture Compliance Review with the scope to examine the company's ability to respond to
  ransonware attacks. You would identify the departments involved and have them nominate representatives. You would then
  tailor checklists to address the requirement for increased resilience. You would circulate to the nominated representatives for
  them to complete. You would then review the completed checklists, identifying and resolving issues. You would then
  determine and present your recommendations.
- C. You would monitor for technology updates from your existing suppliers that could enhance the company's capabilities to detect, react, and recover from an IT security incident. You would prepare and run a disaster recovery planning exercise for a ransomware attack and analyze the performance of the current Enterprise Architecture. Using the findings, you would prepare a gap analysis of the current Enterprise Architecture. You would prepare change requests to address identified gaps. You would add the changes implemented to the Architecture Repository.
- D. You would ensure that the company has in place up-to-date processes for managing change to the current Enterprise Architecture. Based on the scope of the concerns raised, you recommend that this be managed at the infrastructure level. Changes should be made to the baseline description of the Technology Architecture. The changes should be approved by the Architecture Board and implemented by change management techniques.

### Answer: B

Explanation:

Comprehensive and Detailed Step-by-Step Explanation

Context of the Scenario

The scenario highlights significant risks due to ransomware attacks and the need to strengthen the company's Enterprise Architecture to improve data protection and resilience. TOGAF emphasizes the Architecture Compliance Review as a mechanism for ensuring the architecture meets its objectives and addresses specific concerns such as security, resilience, and compliance with organizational goals.

The organization has already conducted a risk assessment but requires actionable steps to:

Address ransomware attack risks.

Increase the resilience of the Technology Architecture.

Ensure proper alignment with governance and compliance frameworks.

Option Analysis

Option A:

Strengths:

Highlights the need for up-to-date processes for managing changes in the Enterprise Architecture.

Recognizes the importance of governance through the Architecture Board and change management techniques.

Weaknesses:

The approach focuses solely on the Technology Architecture baseline but does not address the need for specific steps such as compliance review, gap analysis, or tailored resilience measures for ransomware risks.

It provides a broad and generic approach rather than a targeted plan for ransomware and data protection issues.

Conclusion: Incorrect. While it adheres to governance processes, it lacks specific actions to improve resilience and address the immediate security concerns.

Option B:

Strengths:

Proposes an Architecture Compliance Review, which is a core TOGAF process used to evaluate architecture implementation against defined objectives, ensuring it is fit for purpose.

Involves identifying stakeholders (departments) and tailoring checklists specific to ransomware resilience.

Emphasizes issue identification and resolution through structured review processes.

Weaknesses:

Does not explicitly address longer-term updates to the Enterprise Architecture, but this can be inferred as a next step following compliance recommendations.

Conclusion: Correct. This is the most suitable approach based on TOGAF principles, as it uses an established process to evaluate and improve the architecture's resilience.

Option C:

Strengths:

Includes monitoring for updates from suppliers to enhance detection and recovery capabilities, which is relevant to addressing ransomware risks.

Proposes a gap analysis to identify shortcomings in the current Enterprise Architecture and recommends addressing gaps through change requests.

Incorporates disaster recovery planning exercises, which are useful for testing resilience.

Weaknesses:

While thorough, the approach lacks the Architecture Compliance Review process, which is a more structured way to ensure the architecture meets resilience requirements.

Monitoring suppliers and running disaster recovery exercises are operational steps rather than strategic architectural improvements. Conclusion: Incorrect. While it includes valid activities, it does not adhere to TOGAF's structured approach for architecture assessment and compliance.

Option D:

Strengths:

Proposes analyzing business continuity requirements and assessing the architecture for gaps, which is relevant to the scenario. Suggests initiating an ADM cycle to address gaps, which aligns with TOGAF principles.

Weaknesses

Focusing on initiating a new ADM cycle may be premature, as the immediate priority is to evaluate the existing architecture and address specific resilience concerns.

Does not mention compliance review or tailored resilience measures for ransomware attacks, which are central to the scenario. Conclusion: Incorrect. It proposes a broader approach that may not adequately address the immediate concerns highlighted by the CSO.

TOGAF Reference

Architecture Compliance Review: A structured process used to evaluate whether an architecture meets the stated goals, objectives, and requirements (TOGAF 9.2, Chapter 19). It is particularly useful for identifying and addressing resilience requirements in scenarios involving security risks.

Stakeholder Engagement: Identifying and involving stakeholders (e.g., departments) is a critical part of architecture governance and compliance review (TOGAF 9.2, Section 24.2).

Change Management: The Architecture Compliance Review supports identifying necessary changes, which are then managed through governance and change management processes (TOGAF 9.2, Section 21.6).

By choosing Option B, you align with TOGAF's structured approach to compliance, resilience, and addressing security concerns.

# **NEW QUESTION #97**

Complete the following sentence. In the ADM documents which are under development and have not undergone any formal review and approval process are

- A. In between phases
- B. Invalid
- C. Called "draff"
- D. Known as "Version 0.1"

#### Answer: C

Explanation:

**Explanation** 

In the ADM documents which are under development and have not undergone any formal review and approval process are called "draft". This indicates that they are subject to change and refinement as the architecture development progresses. Reference: The TOGAF Standard | The Open Group Website, Section

4.2.5 Architecture Deliverables.
