현재 경쟁율이 심한 IT시대에, ISACA CRISC 자격증 취득만으로 이 경쟁이 심한 사회에서 자신만의 위치를 보장할 수 있고 더욱이는 한층업된 삶을 누릴 수 있을 수도 있습니다. 우리 Itexamdump 에서 여러분은 ISACA CRISC 관련 학습 자료를 얻을 수 있습니다. 우리 Itexamdump 는 IT 업계 엘리트 한 강사들이 완벽한 ISACA CRISC 문제집을 만들어서 제공합니다. 우리가 제공하는 ISACA CRISC 문제와 답으로 여러분은 한번에 성공적으로 시험을 패스 하실 수 있습니다. 중요한 것 저희 문제집을 선택함으로 여러분의 시간도 절약해드리고 무엇보다도 많은 근심없이 심플하게 시험을 패스하여 좋다는 점입니다.

최신 Isaca Certificaton CRISC 무료 샘플문제 (Q928-Q933):

질문 # 928

Risk management strategies are PRIMARILY adopted to:

- A. take necessary precautions for claims and losses.
- B. avoid risk for business and IT assets.
- C. achieve acceptable residual risk levels.
- D. achieve compliance with legal requirements.

정답: C

질문 # 929

Which of The following should be of GREATEST concern for an organization considering the adoption of a bring your own device (BYOD) initiative?

- A. User support
- B. Malicious users
- C. Data loss
- D. Device corruption

정답: B

질문 # 930

Which of the following key risk indicators (KRIs) is MOST effective for monitoring risk related to a bring your own device (BYOD) program?

- A. Number of devices enrolled in the BYOD program
- B. Number of users who have signed a BYOD acceptable use policy
- C. Number of incidents originating from BYOD devices
- D. Budget allocated to the BYOD program security controls

정답: C

설명:

Section: Volume D

질문 # 931

An organization is preparing to transfer a large number of customer service representatives to the sales department. Of the following, who is responsible for mitigating the risk associated with residual system access?

- A. Access control manager
- B. IT service desk manager
- C. Sales manager
- D. Customer service manager

정답: A

설명:

Residual system access is the risk that the customer service representatives who are transferred to the sales department may still have access to the systems or applications that they used in their previous role, which may not be relevant or authorized for their new role.

The access control manager is the person or function who is responsible for defining, implementing, and maintaining the policies and procedures for granting, modifying, reviewing, and revoking access rights to the systems or applications, based on the principle of least privilege and the segregation of duties.

The access control manager is responsible for mitigating the risk associated with residual system access, by ensuring that the access rights of the customer service representatives are updated or removed according to their new role and responsibilities, and that the access changes are documented and approved by the appropriate authorities.

The other options are not responsible for mitigating the risk associated with residual system access. They are either irrelevant or less effective than the access control manager.

질문 # 932

An organization is considering the adoption of an aggressive business strategy to achieve desired growth
From a risk management perspective what should the risk practitioner do NEXT?

- A. Identify new threats resorting from the new business strategy
- B. Increase the scale for measuring impact due to threat materialization
- C. Inform the board of potential risk scenarios associated with aggressive business strategies
- D. Update risk awareness training to reflect current levels of risk appetite and tolerance

정답: A

설명:

The next thing that the risk practitioner should do from a risk management perspective when the organization is considering the adoption of an aggressive business strategy to achieve desired growth is to identify new threats resulting from the new business strategy. A threat is a potential cause of an unwanted incident that may affect the achievement of the objectives. An aggressive business strategy is a strategy that involves pursuing high-risk, high-reward opportunities or initiatives to gain a competitive advantage or a significant market share. An aggressive business strategy may introduce new threats or increase the likelihood or impact of existing threats, such as market volatility, regulatory changes, customer dissatisfaction, or competitor retaliation. Therefore, the risk practitioner should identify the new threats resulting from the new business strategy, and assess their potential consequences and implications for the organization. The other options are not as immediate as identifying new threats resulting from the new business strategy, as they are related to the update, information, or measurement of the risk management process, not the identification or analysis of the risk.
