### ISTQB Certified Tester Usability Tester Sample Questions (Q36-Q41):

#### NEW QUESTION # 36

Which of the following statements about usability test plans is true?

- A. It contains a schedule
- B. It contains the results of the test sessions
- C. It should be very elaborate and at least 10 pages
- D. It should contain the briefing instructions

**Answer: A**

Explanation:

A usability test plan is a foundational document created before conducting usability testing. It outlines the objectives, scope, methodology, participants, tasks, and schedule for the testing activities. One of its essential components is the schedule, which details when and how test sessions will occur to ensure proper resource allocation and time management. Including a schedule helps coordinate between test moderators, participants, observers, and stakeholders, making the testing process organized and efficient. While briefing instructions (Option B) may be related to the usability test, they are typically documented separately or included in participant materials rather than the formal test plan itself. The test plan should be concise and focused; it need not be overly elaborate or lengthy (Option C), as clarity and usability of the plan are more important than length. The results of the test sessions (Option D) are not included in the test plan but rather compiled afterward in a test report or analysis document. Therefore, the correct statement is that the usability test plan contains a schedule, ensuring a structured timeline for the usability testing activities.

#### NEW QUESTION # 37

You're asked to evaluate the direct interaction between ordinary users and the software product. Which kinds of evaluations would be suited for that?

- A. Accessibility evaluation
- B. Risk assessment
- C. Usability maturity assessment
- D. Usability evaluation

**Answer: D**

Explanation:

A usability evaluation is specifically designed to assess how real users interact with a software product. It focuses on effectiveness, efficiency, and user satisfaction in completing tasks. This may involve usability testing, expert reviews, or heuristic evaluations. The goal is to identify any usability problems and understand user behavior during real use.

Option A (Accessibility evaluation) targets inclusivity for users with disabilities, not general user interaction.

Option B (Usability maturity assessment) evaluates the organization's usability practices, and Option C (Risk assessment) evaluates potential project or system risks. Only option D directly involves observing and measuring user interaction.

### NEW QUESTION # 38

Which of the following is the highest WCAG conformance level, promising the most accessible content?

- A. Quadruple A (AAAA)
- **B. Triple A (AAA)**
- C. Double A (AA)
- D. Single A (A)

**Answer: B**

Explanation:

The Web Content Accessibility Guidelines (WCAG) define three levels of conformance for web content accessibility:

Level A (Single A) is the minimum level of compliance.

Level AA (Double A) is the standard recommended for most websites, balancing accessibility and design.

Level AAA (Triple A) is the highest and most comprehensive level of accessibility, covering the widest range of needs.

There is no such level as "Quadruple A (AAAA)," making option D invalid.

Thus, WCAG Triple A (AAA) promises the most accessible content, even though it may not always be practically achievable for all types of content.

### NEW QUESTION # 39

The usability team has written a usability test report. The report has the following structure:

Executive summary (1 page)

Table of contents (1 page)

Findings and recommendations (5 pages)

Objectives (2 pages)

Purpose (2 pages)

Contacts (1 page)

Which best practice does this usability test report violate?

- **A. The report misses a description of the evaluation method**
- B. The report makes use of usability jargon
- C. The report misses positive findings
- D. The report is too long

**Answer: A**

Explanation:

A best practice in usability reporting (based on ISO/IEC 25062:2006 - Common Industry Format for usability test reports) is to include a clear description of the evaluation method used. This includes how the test was designed, how participants were selected, what tasks were performed, and under what conditions the test was conducted. This ensures the results are credible and reproducible. The provided structure omits this essential information. While the report length is not excessive and positive findings may or may not be present, the key missing component is the method description.

#####

### NEW QUESTION # 40

Usability reviews aim to identify potential usability problems based on certain criteria. Which of the following is a reasonable criterion for a usability review?

- A. Functional requirements
- **B. Usability standards**
- C. Statutory Code of Practice
- D. Opinion of the management

**Answer: B**

Explanation:

Usability reviews evaluate a system or interface against established usability principles or standards to identify potential issues before user testing. A recognized criterion for such reviews includes adherence to usability standards such as ISO 9241 or the Web Content Accessibility Guidelines (WCAG). These standards are derived from years of research and user-centered design principles. Options A and C do not directly relate to usability. Functional requirements (option B) refer to what the system should do, not how usable it is.

Hence, option D is correct as usability standards provide a consistent, objective basis for evaluating usability.
