FORTINET

An administrator deploys a new collector for the first time, and notices that all the processes except the phMonitor are down. How can the administrator bring the processes up?

- A. The collector was not deployed properly and must be redeployed.
- **B. The processes will come up after the collector is registered to the supervisor.**
- C. The administrator needs to run the command phtools - start all on the collector.
- D. Rebooting the collector will bring up the processes.

Answer: B

Explanation:

When a FortiSIEM collector is deployed for the first time, most of its processes remain down until it is successfully registered with the supervisor.

The phMonitor process is running because it monitors system health, but other services remain inactive until the collector establishes communication with the supervisor.

Once the collector registers to the supervisor, it receives configurations and policies, and its processes will start automatically.

NEW QUESTION # 12

Which organization do agents belong to after registration? (Choose two.)

- A. The windows agents belong to the super organization.
- **B. The agents belong to the organization specified in the command line parameters for Linux platforms.**
- C. The Linux agents belong to the super local organization.
- **D. The agents belong to the organization specified in the agent installation setup wizard for Windows platforms.**

Answer: B,D

Explanation:

When registering agents in FortiSIEM, the organization to which they belong depends on how they are installed:

Windows Agents

During installation, the setup wizard prompts the user to specify the organization.

This ensures the agent is correctly assigned to the organization defined during setup.

Linux Agents

Installation on Linux requires command-line parameters, including the organization name.

This means that the organization is explicitly defined during the installation process.

NEW QUESTION # 13

Refer to the exhibit.

```

Which workers are assigned tasks for the query ID 13127? (Choose two.)

- A. Worker3 has four tasks for query ID 13127*.
- B. Worker1 has one task for query ID 13127*.
- C. Worker3 has two tasks for query ID 13127*.
- D. Worker2 has two tasks for query ID 13127*.
- E. Worker1 has no tasks for query ID 13127*.

Answer: C,E

Explanation:

The exhibit shows the directory listings for three different workers (worker1, worker2, and worker3) under the /querywkr/active/13127* path, which indicates active query tasks assigned to each worker.

1. Worker1 (worker1)
2. Worker2 (worker2)
3. Worker3 (worker3)

NEW QUESTION # 14

  <entry attribute="virusName" name="Malware Name">EICAR_TEST_FILE</entry>
  </incidentDetails>
  <affectedBizSrv>null</affectedBizSrv>
  <identityLocation>
  </identityLocation>
</incident>
```

An administrator wants to remediate the incident from FortiSIEM shown in the exhibit.

What option is available to the administrator?

- A. Quarantine IP FortiClient
- B. Run the block IP FortiOS 5.4
- C. Run the block domain Windows DNS
- D. Run the block MAC FortiOS

Answer: B

Explanation:

The incident shown in the exhibit indicates that a firewall detected malware but could not remediate it. The firewall identified the EICAR_TEST_FILE virus and logged the source IP (10.0.3.10) as the origin of the threat.

To remediate this, the administrator should take action at the network level, specifically using FortiOS to block the source IP address. The option "Run the block IP FortiOS 5.4" provides the ability to block traffic from the infected IP at the firewall level, effectively preventing further threats from that source.
