Buy TestBraindump CV0-004 Practice Material Today and Save Money with Free One Year Updates

Our CV0-004 exam materials have plenty of advantages. For example, in order to meet the needs of different groups of people, we provide customers with three different versions of CV0-004 actual exam, which contain the same questions and answers. They are the versions of the PDF, Software and APP online. You can choose the one which is your best suit of our CV0-004 Study Materials according to your study habits.

CompTIA Cloud+ (2025) Sample Questions (Q174-Q179):

NEW QUESTION # 174
A systems administrator is using VMs to deploy a new solution that contains a number of application VMs. Which of the following would provide high availability to the application environment in case of hypervisor failure?

- A. Cold migration
- B. Affinity rules
- C. Live migration
- D. Anti-affinity rules

Answer: D

Explanation:
Anti-affinity rules help ensure high availability by preventing multiple application VMs from running on the same hypervisor host. In

case of hypervisor failure, this reduces the likelihood of all application VMs being affected, as they would be running on separate hosts. This allows for increased redundancy and fault tolerance in the application environment.

NEW QUESTION # 175

A company is considering consolidating a number of physical machines into a virtual infrastructure that will be located at its main office. The company has the following requirements:
- High-performance VMs
- More secure
- Has system independence
Which of the following is the BEST platform for the company to use?

- A. Remote dedicated hosting
- B. Type 1 hypervisor
- C. Type 2 hypervisor
- D. Software application virtualization

Answer: B

Explanation:
Type 1 hypervisor would be the BEST platform for the company to use in this scenario. Type 1 hypervisors are native hypervisors that are installed directly on the host machine's hardware.
They provide high-performance virtualization, better security, and greater system independence, making them a better option than Type 2 hypervisors, software application virtualization, or remote dedicated hosting.

NEW QUESTION # 176

A user's assigned cloud credentials are locked, and the user is unable to access the project's application. The cloud administrator reviews the logs and notices several attempts to log in with the user's account were made to a different application after working hours. Which of the following is the best approach for the administrator to troubleshoot this issue?

- A. Track the source of the log-in attempts and block the IP address of the source in the WAR
- B. Install an IDS on the network to monitor suspicious activity
- C. Reset the user's account and implement a stronger lock-out policy.
- D. Create new credentials for the user and restrict access to the authorized application.

Answer: A

Explanation:
The administrator should track the source of the log-in attempts and block the IP address in the Web Application Firewall (WAF).
This will prevent further unauthorized attempts from that source. It is also advisable to reset the user's account credentials as a precautionary measure.
Incident response and addressing unauthorized access attempts, including tracking and blocking IP addresses, are security measures addressed in the CompTIA Cloud+ material.

NEW QUESTION # 177

Which of the following are best practices when working with a source control system? (Select two).

- A. Merging code often
- B. Performing code deployment
- C. Initiating a pull request
- D. Pushing code directly to production
- E. Maintaining one branch for all features
- F. Committing code often

Answer: A,F

Explanation:
Best practices when working with a source control system include merging code often to ensure that changes from different team members are integrated regularly, reducing integration issues. Committing code often is also recommended to save small changes

frequently, which helps in tracking changes and resolving issues more effectively.References: Source control system best practices are part of the software development and deployment guidelines discussed in the CompTIA Cloud+ examination objectives.

NEW QUESTION # 178
A high-usage cloud resource needs to be monitored in real time on specific events to guarantee its availability.
Which of the following actions should be used to meet this requirement?

- A. Configure a ping command to identify when the cloud instance is out of service.
- B. Schedule an hourly scan of the network to check for the availability of the resource.
- C. Create a dashboard with visualizations to filter the status of critical activities.
- D. Collect all the daily activity from the cloud instance and create a dump file for analysis.

Answer: C

Explanation:
To guarantee real-time monitoring of a high-usage cloud resource, creating a dashboard with visualizations to filter the status of critical activities is effective. This allows for a quick visual assessment of the system's health and performance, enabling immediate action if specific events indicate potential issues with availability.References: Real-time monitoring and the use of dashboards for tracking critical cloud resources are part of the cloud management best practices covered under the CompTIA Cloud+ objectives.

NEW QUESTION # 179
......

CompTIA Cloud+ (2025) (CV0-004) dumps PDF version is printable and embedded with valid CompTIA CV0-004 questions to help you get ready for the CompTIA Cloud+ (2025) (CV0-004) exam quickly. CompTIA Cloud+ (2025) (CV0-004) exam dumps pdf are also usable on several smart devices. You can use it anywhere at any time on your smartphones and tablets. We update our CompTIA CV0-004 Exam Questions bank regularly to match the changes and improve the quality of CV0-004 Questions so you can get a better experience.
