

# Three formats of Salesforce Analytics-Arch-201 practice exams meet the diverse needs

2026 Latest TestKingFree Analytics-Arch-201 PDF Dumps and Analytics-Arch-201 Exam Engine Free Share:  
<https://drive.google.com/open?id=1Yl-WRyoZLHZMmb4q4tNJBu2E7zVe-qdo>

Though our Analytics-Arch-201 study guide has three formats which can meet your different needs, PDF version, software version and online version, i love the PDF version to the best. If you choose the PDF version, you can download our Analytics-Arch-201 exam material and print it for studying everywhere. And you can take notes on them as long as any new thoughts come to you. If a new version of the Analytics-Arch-201 learning guide comes out, we will send you a new link to your E-mail box and you can download it again.

## Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li></ul>

## Latest Salesforce Analytics-Arch-201 Exam Tips - Free Analytics-Arch-201 Exam

Our Analytics-Arch-201 exam questions are up to date, and we provide user-friendly Analytics-Arch-201 practice test software for the Analytics-Arch-201 exam. Moreover, we are also providing money back guarantee on all of Salesforce Certified Tableau Architect test products. If the Analytics-Arch-201 braindumps products fail to deliver as promised, then you can get your money back. The Analytics-Arch-201 Sample Questions include all the files you need to prepare for the Salesforce Analytics-Arch-201 exam. With the help of the Analytics-Arch-201 practice exam questions, you will be able to feel the real Analytics-Arch-201 exam scenario, and it will allow you to assess your skills.

### Salesforce Certified Tableau Architect Sample Questions (Q84-Q89):

#### NEW QUESTION # 84

In a multi-node Tableau Server environment, you are experiencing intermittent database connectivity issues. What should be the first step in troubleshooting this problem?

- A. Changing the database server to a different platform that is known for more stable connectivity
- **B. Checking the network configuration and firewalls between the Tableau Server nodes and the database server for any connectivity barriers**
- C. Increasing the number of worker nodes in the Tableau Server environment to enhance overall connectivity
- D. Upgrading the database server's hardware to improve its ability to handle connections

**Answer: B**

Explanation:

Checking the network configuration and firewalls between the Tableau Server nodes and the database server for any connectivity barriers. The first step in troubleshooting intermittent database connectivity issues in a multi-node Tableau Server environment is to check the network configuration and firewall settings. This involves ensuring that there are no barriers or misconfigurations in the network that could be blocking or interrupting the connectivity between the Tableau Server nodes and the database server. Option A is incorrect because simply increasing the number of worker nodes may not address the underlying network connectivity issues. Option C is incorrect as upgrading the database server's hardware does not directly resolve network connectivity problems. Option D is incorrect because changing the database platform is a drastic measure and should be considered only after ruling out network-related issues.

#### NEW QUESTION # 85

When configuring trusted authentication for Tableau Server, which step is essential to ensure that the server securely accepts requests from a trusted third-party application?

- A. Setting up a VPN tunnel between Tableau Server and the third-party application
- B. Enabling cross-origin resource sharing (CORS) on Tableau Server for all domains
- C. Configuring all users in Tableau Server to have default administrative privileges
- **D. Adding the third-party application's server IP address to the list of trusted hosts in Tableau Server**

**Answer: D**

Explanation:

Adding the third-party application's server IP address to the list of trusted hosts in Tableau Server. For trusted authentication to function correctly, it is crucial to add the third-party application's server IP address to Tableau Server's list of trusted hosts. This step ensures that Tableau Server recognizes and accepts authentication requests from this specific application, enhancing security by limiting access to known, trusted sources. Option A is incorrect because setting up a VPN tunnel is not a standard requirement for configuring trusted authentication in Tableau Server. Option C is incorrect as configuring default administrative privileges for all users is unrelated to trusted authentication and poses a security risk. Option D is incorrect because enabling CORS for all domains is not directly related to the configuration of trusted authentication and could introduce security vulnerabilities.

#### NEW QUESTION # 86

In developing a load testing strategy for Tableau Server, what aspect is important to include to ensure comprehensive testing?

- A. Running the tests only with administrative users to evaluate the server's response to privileged activities
- **B. Simulating a variety of user activities, such as viewing dashboards, publishing workbooks, and refreshing extracts**
- C. Testing the server with a single, high-usage dashboard to see its performance under stress
- D. Exclusively testing the data source connection speeds to determine the overall server performance

**Answer: B**

Explanation:

Simulating a variety of user activities, such as viewing dashboards, publishing workbooks, and refreshing extracts A comprehensive load testing strategy for Tableau Server should include simulating a variety of user activities. This includes tasks like viewing dashboards, publishing workbooks, and refreshing extracts. This approach ensures a thorough evaluation of the server's performance across different types of demands and user interactions, providing a more realistic assessment of its capabilities and limitations. Option A is incorrect because testing with only a single dashboard does not account for the varied activities users perform on the server. Option C is incorrect as focusing solely on data source connection speeds neglects other crucial aspects of server performance. Option D is incorrect because running tests only with administrative users does not replicate the typical activities of regular users, which are essential for understanding the server's performance under normal operating conditions.

#### NEW QUESTION # 87

When installing Tableau Server on a Linux system, you encounter an issue where the server is unable to communicate with external data sources. What is the first step you should take to troubleshoot this networking issue?

- A. Reinstalling Tableau Server to reset its network configuration
- B. Configuring Tableau Server to bypass the firewall for all external communications
- **C. Checking the firewall settings on the Linux server to ensure necessary ports are open**
- D. Upgrading the network drivers on the Linux server

**Answer: C**

Explanation:

Checking the firewall settings on the Linux server to ensure necessary ports are open The first step in troubleshooting communication issues between Tableau Server on Linux and external data sources is to check the firewall settings on the Linux server. Ensuring that the necessary ports are open and correctly configured to allow traffic to and from Tableau Server is crucial for successful external communications. Option A is incorrect because reinstalling Tableau Server is an excessive measure before checking network configurations. Option C is incorrect as upgrading network drivers, while potentially beneficial, is not the first step in troubleshooting network communication issues. Option D is incorrect because configuring Tableau Server to bypass the firewall can introduce significant security vulnerabilities and is not a recommended practice.

#### NEW QUESTION # 88

A company is transitioning to Tableau Cloud but still has critical data in on-premises databases that need to be accessed in real-time. What is the best solution for integrating these data sources with Tableau Cloud?

- **A. Implement Tableau Bridge to establish a live connection to on-premises databases**
- B. Utilize Tableau Builder for real-time data integration
- C. Rely solely on Tableau Cloud's native capabilities for on-premises data integration
- D. Migrate all on-premises data to the cloud before using Tableau Cloud

**Answer: A**

Explanation:

Implement Tableau Bridge to establish a live connection to on-premises data-bases Tableau Bridge is specifically designed to allow real-time access to on-premises data from Tableau Cloud, making it the ideal solution for this scenario. Option A is incorrect because Tableau Prep Builder is used for data preparation, not for establishing live connections to on-premises data sources. Option C is incorrect as migrating all data to the cloud may not be feasible or desirable for all companies. Option D is incorrect because Tableau Cloud's native capabilities do not include direct live data connections to on-premises databases without Tableau Bridge.

#### NEW QUESTION # 89

.....

Now there are many IT training institutions which can provide you with Salesforce certification Analytics-Arch-201 exam related training material, but usually through these website examinees do not gain detailed material. Because the materials they provide are specialized for Salesforce Certification Analytics-Arch-201 Exam, so they didn't attract the examinee's attention.
