Microsoft GH-100 Pass Leader Dumps | GH-100 Exam Score

The GH-100 study braindumps are compiled by our professional experts who have been in this career for over ten years. Carefully written and constantly updated content of our GH-100 exam questions can make you keep up with the changing direction of the exam, without aimlessly learning and wasting energy. In addition, there are many other advantages of our GH-100 learning guide. Hope you can give it a look and you will love it for sure!

Microsoft GH-100 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">• Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI• CD pipelines. |
| Topic 2 | <ul style="list-style-type: none">• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI• CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps. |

| | |
|---------|--|
| Topic 3 | <ul style="list-style-type: none"> • Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security. |
| Topic 4 | <ul style="list-style-type: none"> • Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication. |

Microsoft GitHub Administration Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which of the following is the responsibility of a Team Maintainer in a GitHub organization? (Choose two.)

- A. Modifying organization-wide settings.
- **B. Managing nested sub-teams.**
- **C. Adding or removing team members.**
- D. Deleting repositories assigned to the team.

Answer: B,C

Explanation:

Team maintainers can manage nested sub-teams - requesting to add or change parent/child teams within the organization's hierarchy. Team maintainers have permission to add and remove members from their team, controlling day-to-day team membership.

NEW QUESTION # 41

How is CodeQL different from other static analysis tools?

- **A. It allows querying of code semantics using a database-like language.**
- B. It runs analysis only after a security breach.
- C. It only works for open-source projects.
- D. It removes insecure code automatically

Answer: A

Explanation:

CodeQL differs from traditional static analysis tools by ingesting your code into a queryable database and letting you write QL queries - its own database-style language - to express semantic checks and find patterns across the codebase.

NEW QUESTION # 42

Which of the following GitHub token types supports fine-grained repository permissions AND is recommended for CI/CD automation?

- A. Personal Access Tokens (PATs)
- **B. GitHub App Installation Access Tokens**
- C. OAuth tokens
- D. Device Tokens

Answer: B

Explanation:

GitHub App Installation Access Tokens are privileged to the exact permissions you grant the App - down to individual repositories - and rotate automatically, making them the recommended choice for CI/CD automation workflows that demand least-privilege, fine-grained access.

NEW QUESTION # 43

You are planning GitHub account management for a healthcare organization with strict compliance requirements. Which THREE of the following statements accurately describe GitHub Enterprise Managed Users (EMU) accounts? (Choose three.)

- A. EMU accounts are owned by the organization and cannot be unlinked.
- B. EMU accounts restrict users to enterprise-related activities only
- C. EMU accounts are managed through an identity provider such as Azure AD.
- D. EMU accounts can be used for both personal and enterprise repositories.
- E. EMU accounts are created and managed by individual users.
- F. EMU accounts allow users to create and manage their own credentials.

Answer: A,B,C

Explanation:

Enterprise Managed User accounts are provisioned and authenticated exclusively through your identity provider (for example, AzureAD), so the IdP handles their creation, attribute updates, and deprovisioning.

Managed user accounts cannot create public content or interact with repositories outside your enterprise; they're confined to private and internal repos within the enterprise.

EMU accounts are owned and controlled by the enterprise (via the IdP) and cannot be converted into or unlinked as personal accounts outside that enterprise.

NEW QUESTION # 44

Which of the following is a key benefit of setting default read permissions across organizations?

- A. Increases efficiency in content creation and updates.
- B. Enhances security by minimizing unintended modifications.
- C. Improves collaboration by allowing users to modify content directly.
- D. Suits environments where all users need write access.

Answer: B

Explanation:

Enforcing a default of Read for organization members ensures they can view content without the ability to push changes, reducing the risk of accidental or unauthorized modifications.

NEW QUESTION # 45

.....

It never needs an internet connection. PrepPDF's GitHub Administration practice exam software has several mock exams, designed just like the real exam. Microsoft GH-100 practice exam software contains all the important questions which have a greater chance of appearing in the final exam.
