Plat-Admn-301 training materials & Plat-Admn-301 exam torrent & Plat-Admn-301 dumps torrent

If you buy and use the Plat-Admn-301 study materials from our company, you can complete the practice tests in a timed environment, receive grades and review test answers via video tutorials. You just need to download the software version of our Plat-Admn-301 Study Materials after you buy our study materials. You will have the right to start to try to simulate the real examination. We believe that the Plat-Admn-301 study materials from our company will not let you down.

Salesforce Plat-Admn-301 Exam Syllabus Topics:

Topic	Details
Topic 1	• Auditing and Monitoring: This section of the exam measures skills of a Salesforce Support Specialist and covers the tools used to monitor system behavior and review user activity. It includes understanding debug logs, setup audit trail, and methods for ensuring sensitive data is handled correctly in both production and sandbox environments. It also explains how to review and troubleshoot security settings, including recognizing pending updates that might affect system access.

Topic 2	• Security and Access: This section of the exam measures the skills of Salesforce Administrator and covers how record-level access, field access, and sharing models impact data visibility across the system. It focuses on understanding controlled-by-parent relationships, territory management, role hierarchies, and access to reports, dashboards, and email folders. It also includes comparing custom profiles, permission sets, and delegated administration, along with evaluating different authentication methods. The section also addresses the structure of business models such as person accounts, standard accounts, contacts, and contact-to-multiple-account relationships.
Topic 3	• Data and Analytics Management: This section of the exam measures skills of Salesforce Data Analyst and covers data quality assessment, data enrichment, and duplicate management. It explains how to choose appropriate reporting and analytics tools for advanced requirements, including custom report types, snapshots, formulas, joined reports, and dashboard configurations. It also covers methods for connecting external data sources using big objects, external objects, data warehouses, data lakes, and Salesforce Connect. Finally, it describes the suitable tools and methods for importing data, including Data Loader, Data Import Wizard, and external IDs.
Topic 4	• Process Automation: This section of the exam measures skills of Salesforce Consultant and covers choosing the right automation tools to solve complex business problems. It focuses on understanding the capabilities and limitations of declarative tools, identifying the right troubleshooting methods, and applying automation correctly within Salesforce's order of execution. This section emphasizes designing efficient, scalable automation using workflow tools, flows, and other declarative features.
Topic 5	• Cloud Applications: This section of the exam measures skills of Salesforce Consultant and covers the standard Salesforce capabilities that support sales and service operations. It includes features such as products, price books, schedules, orders, quotes, and the tools that help with forecasting and territory management. The section also describes how to create Salesforce Knowledge articles, manage entitlements, support service workflows, and enable interactions through chat, case feed, Omni-Channel, console apps, and Experience Cloud sites. It also introduces the broader Salesforce suite that extends core platform functionality.

Salesforce Certified Platform Administrator II Sample Questions (Q85-Q90):

NEW QUESTION # 85
Cloud Kicks has an export of Order and Order Item data from an enterprise resource planning (ERP) system.
The data must be imported into the Salesforce Order and Order Product objects, while maintaining the relationships in the data.
What are two ways the administrator should load the data?
Choose 2 answers

- A. Map an External ID data value to the object.
- B. Replace the Salesforce record ID with the External ID.
- C. Use an Insert operation to load data.
- D. Use an Upsert operation to load data.

Answer: A,C

Explanation:
Use an Insert operation to load data because the data is not already in Salesforce and does not need to be updated or deleted3.
Map an External ID data value to the object because External IDs are used to create relationships between records that are being imported and records that already exist in Salesforce4.

NEW QUESTION # 86
The administrator at Cloud Kicks created a flow in a sandbox that walks service agents through the Return Merchandise Authorization creation process. The administrator deployed the flow to production with a Change Set. Users are unable to use the flow in production.

Which step should the administrator take?
Activate the flow administrator take?

- A. Ensure there is an active flow version in the sandbox.
- B. Deployment the flow, with the Metadata API instead of Change Sets
- C. Include the active and prior inactive flow version in the Change Set.
- D. Activate the flow manually after deployment.

Answer: D

Explanation:
A flow is an automation tool that allows you to create processes that perform actions based on user input or record changes. A flow can be triggered by a user who launches it from a button, link, or Lightning page, or by the system when a record is created or updated. A flow has different versions that can be active or inactive.
An active version is the one that runs when the flow is triggered, while an inactive version is the one that is saved but not running. When you deploy a flow to production with a change set, the flow version is deployed as inactive by default. This means that you need to activate the flow manually after deployment if you want it to run in production. References:

NEW QUESTION # 87
DreamHouse Realty (DR) wants to ensure that its data is protected. There have been several recent attempts to phish employees. What should DR do to help ensure that the user that is logged in is the right user when the running user is trying to view reports and dashboards?

- A. Require MFA when users need to view and export dashboards and reports.
- B. Set up an authentication provider for reports and dashboards.
- C. Require a high assurance session when exporting or printing reports and dashboards.
- D. Require a Username, Password, and Security Token when logging in.

Answer: C

Explanation:
To help ensure that users who are viewing reports and dashboards are who they say they are, DR should require a high assurance session when exporting or printing reports and dashboards. A high assurance session requires users to verify their identity using multi-factor authentication before accessing sensitive data or functionality in Salesforce. References:

NEW QUESTION # 88
What are three options available to the administrator to help with this issue? Choose 3 answers

- A. Move some page components behind a tab.
- B. Reduce the number of related lists displayed.
- C. Convert all Process builders to flows.
- D. Remove some of the fields displayed.
- E. Deactivate unnecessary validation rules.

Answer: A,B,D

Explanation:
Move some page components behind a tab, remove some of the fields displayed, and reduce the number of related lists displayed are three options available to the administrator to help with this issue. Moving some page components behind a tab can help reduce the loading time of a record page by hiding some components until they are needed by the user. Removing some of the fields displayed can help reduce the loading time of a record page by minimizing the number of queries and calculations that need to be performed when rendering the page. Reducing the number of related lists displayed can help reduce the loading time of a record page by limiting the amount of data that needs to be retrieved and displayed on the page

NEW QUESTION # 89
Cloud Kicks has just released a new Process Builder on the Account in production. The end users keep getting error messages that prevent them from completing their updates to the Account.
Which three things should the administrator do to resolve this issue?
Choose 3 answers

- A. Deactivate the Process Builder in production.
- B. Manually make the updates to the Account as the logged-in user.
- C. Fix the Process Builder in a sandbox and migrate the change to production.
- D. Review the Error Email for the Process Builder and rectify the issues.
- E. Have the users refresh the Account page so they get the current Process Builder.

Answer: A,C,D

Explanation:
To resolve the issue with the Process Builder, the administrator should do the following steps:
* Review the Error Email for the Process Builder and rectify the issues. The error email contains information about what caused the error and how to fix it.
* Deactivate the Process Builder in production. This will prevent further errors from occurring while the administrator fixes the Process Builder.
* Fix the Process Builder in a sandbox and migrate the change to production. This will ensure that the Process Builder is tested and validated before deploying it to production. References: https://help.
