

# **Splendid Juniper JN0-253 Exam Questions - Pass Exam Confidently [2026]**

DOWNLOAD the newest ActualPDF JN0-253 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=16J6jIZL0mtx7X7Ergz6EEQuF1mG6YGV4>

Confronting a tie-up during your review of the exam? Feeling anxious and confused to choose the perfect JN0-253 latest dumps to pass it smoothly? We understand your situation of susceptibility about the exam, and our JN0-253 test guide can offer timely help on your issues right here right now. Without tawdry points of knowledge to remember, our experts systematize all knowledge for your reference. You can download our free demos and get to know synoptic outline before buying. Just hold the supposition that you may fail the exam even by the help of our JN0-253 Study Tool, we can give full refund back or switch other versions for you to relieve you of any kind of losses. What is more, we offer supplementary content like updates for one year after your purchase.

## **Juniper JN0-253 Exam Syllabus Topics:**

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Juniper Mist Monitoring and Analytics: This domain focuses on monitoring tools including service-level expectations, packet captures, AI-driven insights, automated alerts, and audit logs for comprehensive network visibility.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Juniper Mist Cloud Fundamentals: This domain covers Juniper's cloud-native platform architecture, focusing on AI and machine learning capabilities for intelligent network management and real-world deployment scenarios.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.</li></ul>

- Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.

## Mist AI, Associate (JNCIA-MistAI) passleader free questions & JN0-253 valid practice dumps

We are amenable to offer help by introducing our JN0-253 real exam materials and they can help you pass the Mist AI, Associate (JNCIA-MistAI) practice exam efficiently. All knowledge is based on the real exam by the help of experts. By compiling the most important points of questions into our JN0-253 guide prep our experts also amplify some difficult and important points. There is no doubt they are clear-cut and easy to understand to fulfill your any confusion about the exam. Our Mist AI, Associate (JNCIA-MistAI) exam question is applicable to all kinds of exam candidates who eager to pass the exam. Last but not the least, they help our company develop brand image as well as help a great deal of exam candidates pass the exam with passing rate over 98 percent of our JN0-253 Real Exam materials.

### Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q101-Q106):

#### NEW QUESTION # 101

Which two statements about webhooks and APIs are correct? (Choose two.)

- A. 100% of all Juniper Mist objects are configurable using webhooks.
- B. There is an hourly limit to the number of API calls that an organization can have.
- C. Webhooks are a push from Juniper Mist, and APIs are a pull by the client.
- D. There is an hourly limit to the number of webhooks that an organization can have.

**Answer: B,C**

Explanation:

In the Juniper Mist Cloud architecture, both webhooks and APIs are key interfaces for automation, integration, and data exchange with third-party systems. While they both facilitate communication between Mist and external applications, they operate in opposite directions and serve distinct purposes.

According to the Juniper Mist API and Webhook Developer Guide:

\* Webhooks are push-based notifications initiated by the Juniper Mist Cloud. When specific events occur (such as device disconnection, client onboarding, or alert generation), Mist sends structured JSON payloads to a preconfigured external URL endpoint.

\* APIs (Application Programming Interfaces) are pull-based queries where an external client polls the Mist Cloud to retrieve or update data (e.g., inventory, configuration, or metrics).

Additionally, the Mist Cloud enforces rate limits on API calls to ensure platform stability and fair usage:

"API rate limits are applied on a per-organization basis to prevent excessive polling and to maintain consistent performance." In contrast, webhooks do not have a strict hourly quota because they are event-triggered rather than continuous requests.

Therefore:

- \* A is correct - Webhooks push, APIs pull.
- \* B is correct - There is an hourly API rate limit per organization.

Options C and D are incorrect because webhooks are event-based (not rate-limited hourly) and do not configure Mist objects directly - they only send notifications.

#### NEW QUESTION # 102

How does Mist determine the location of clients in an indoor setting?

- A. probability surface
- B. GPS
- C. triangulation
- D. trilateration

**Answer: A**

Explanation:

Mist builds location from "Probability Surfaces" not triangulation. The more directional RSSI beam information your client hears, the more data for the location engine to work with creating the probability surfaces, which provides the best possible location accuracy with sub second latency.

**NEW QUESTION # 103**

Which two protocols does Marvis Minis automatically validate? (Choose two.)

- A. Simple Network Management Protocol (SNMP)
- B. Address Resolution Protocol (ARP)
- C. Network Time Protocol (NTP)
- D. Dynamic Host Configuration Protocol (DHCP)

**Answer: B,D**

Explanation:

Marvis Minis is a feature within Juniper Mist Virtual Network Assistant (VNA) that proactively tests and validates network performance by simulating user connections. Instead of waiting for user complaints, it performs synthetic client transactions to confirm the functionality of critical network services.

According to the Juniper Mist Marvis Minis Technical Overview and Marvis AI Operations Guide, Minis validates several network functions automatically, including:

\* Dynamic Host Configuration Protocol (DHCP): Ensures clients can obtain IP addresses properly from DHCP servers, validating end-to-end DHCP exchange success and response time.

\* Address Resolution Protocol (ARP): Verifies correct IP-to-MAC address resolution, confirming that clients can reach devices on the same subnet and that ARP tables are updated correctly.

Marvis Minis also performs checks on DNS resolution, authentication, and application reachability, but not on SNMP or NTP.

Those protocols are used for management and time synchronization, not end-user connectivity validation.

Thus, the correct answers are B (DHCP) and D (ARP).

**NEW QUESTION # 104**

At which two configuration levels are WLAN objects created? (Choose two.)

- A. user level
- B. device level
- C. site level
- D. org level

**Answer: C,D**

Explanation:

Site Level: WLAN objects can be created at the site level, allowing specific configurations for different locations within an organization. This helps in customizing WLAN settings based on the unique requirements of each site.

Org Level: WLAN objects can also be created at the organization level, which provides a standardized configuration that can be applied across multiple sites. This ensures consistency in WLAN settings throughout the entire organization.

**NEW QUESTION # 105**

Which two use cases are popular in location-based services (LBS) deployments? (Choose two.)

- A. SSID scheduling
- B. wayfinding
- C. micro segmentation
- D. asset tracking

**Answer: B,D**

## Explanation:

**Asset Tracking:** Asset tracking is a common use case in LBS deployments, enabling organizations to locate and manage assets in real-time. This is particularly useful in environments like hospitals, warehouses, and large corporate campuses where knowing the precise location of equipment can save time and improve efficiency.

**Wayfinding:** Wayfinding helps users navigate through complex environments, such as large buildings, airports, and shopping malls. By providing real-time navigation assistance, LBS enhances the user experience and improves accessibility within these spaces.

## NEW QUESTION # 106
