# Cloud-Deployment-and-Operations Exam Questions - Successful Guidelines For Preparation [2026]

P.S. Free & New Cloud-Deployment-and-Operations dumps are available on Google Drive shared by Test4Sure:
https://drive.google.com/open?id=15tbEWvVKo26LgeqqG8-xSAl56Y_Ji7XB

The more you can clear your doubts, the more easily you can pass the WGU Cloud Deployment and Operations (Cloud-Deployment-and-Operations) exam. Test4Sure Cloud-Deployment-and-Operations practice test works amazingly to help you understand the Cloud-Deployment-and-Operations exam pattern and how you can attempt the real WGU Exam Questions. It is just like the final Cloud-Deployment-and-Operations exam pattern and you can change its settings. When you take Test4Sure WGU Cloud-Deployment-and-Operations Practice Exams, you can know whether you are ready for the finals or not. It shows you the real picture of your hard work and how easy it will be to clear the Cloud-Deployment-and-Operations exam if you are ready for it.

## WGU Cloud-Deployment-and-Operations Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Cloud Service Deployment and Management: This section of the exam measures skills of Cloud Engineers and covers the technical knowledge required to deploy, manage, and operate cloud services. It focuses on understanding stability, scalability, backup processes, recovery methods, and general deployment practices. Candidates are expected to show they can handle provisioning, monitoring, and connectivity tasks needed to support cloud environments. |
| Topic 2 | • Automating Cloud Provisioning and Maintenance: This section of the exam measures skills of Cloud Operations engineers and covers the ability to automate provisioning tasks and ongoing maintenance activities. It emphasizes using automation tools to streamline cloud resource creation and lifecycle management. Students must demonstrate they can apply automation to maintain efficient cloud operations. |
| | |

| | |
|---|---|
| Topic 3 | • Monitoring, Logging, and Issue Remediation: This section of the exam measures skills of Cloud Engineers and covers responding to issues identified through AWS monitoring and logging tools. Candidates must show they can interpret system outputs, identify problems, and take corrective actions to maintain smooth cloud operations. |
| Topic 4 | • Ensuring Scalability, Elasticity, and Backup Readiness: This section of the exam measures skills of Cloud Operations Specialists and covers implementing AWS features that support scalability, elasticity, and backup readiness. It focuses on enabling cloud systems to handle fluctuating workloads while maintaining continuity and ensuring critical data remains recoverable. |
| Topic 5 | • Implementing Cloud Security and Compliance: This section of the exam measures skills of Cloud Engineers and covers the use of AWS security tools to protect data and infrastructure. Candidates must demonstrate awareness of compliance needs and the ability to apply protective controls that align with industry and organizational standards. |
| Topic 6 | • Configuring Cloud Network Connectivity: This section of the exam measures skills of Cloud Engineers and covers network connectivity within AWS environments, including setup, troubleshooting, and corrective actions. Candidates must show they can manage cloud networking in a way that ensures reliable communication between systems and services. |

# Cloud-Deployment-and-Operations Test Guide: Courses and Certificates & Cloud-Deployment-and-Operations Exam Torrent & Cloud-Deployment-and-Operations Training Materials

We will offer you the privilege of 365 days free update for Cloud-Deployment-and-Operations latest exam dumps. While, other vendors just give you 90 days free update. As a wise person, it is better to choose our Cloud-Deployment-and-Operations study material without any doubts. Due to the high quality and Cloud-Deployment-and-Operations accurate questions & answers, many people have passed their actual test with the help of our products. Now, quickly download Cloud-Deployment-and-Operations free demo for try. You will get 100% pass with our verified Cloud-Deployment-and-Operations training vce.

## WGU Cloud Deployment and Operations Sample Questions (Q29-Q34):

**NEW QUESTION # 29**
(Which AWS solution can send email based on CloudWatch alarms?)

- A. Simple Notification Service (SNS)
- B. Amplify
- C. Simple Queue Service (SQS)
- D. Kinesis

**Answer: A**

Explanation:
Amazon CloudWatch alarms can trigger notifications when a metric breaches a defined threshold. The AWS solution designed to send emails based on these alarms is Amazon Simple Notification Service (SNS). SNS supports sending notifications via email, SMS, and other protocols when subscribed endpoints are triggered by CloudWatch alarms. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, Monitoring and Alarms) states that SNS is the primary service for delivering notifications from CloudWatch, allowing users to configure email subscriptions for alarm states. Other options like SQS, Amplify, and Kinesis are not designed for this purpose.

**NEW QUESTION # 30**
(What can AWS Config directly invoke to cause remediation of findings?)

- A. CloudWatch alarm
- B. Lambda function
- C. Systems Manager document
- D. Control Tower guardrail

**Answer: B**

Explanation:
AWS Config can directly invoke an AWS Lambda function to cause remediation of findings by triggering automated responses to configuration changes or non-compliant resources. This integration enables real-time corrective actions. The WGU Cloud Deployment and Operations Study Guide (Section 6.1, AWS Config) states, "AWS Config can invoke a Lambda function as a remediation action, allowing automated fixes for non- compliant resources (e.g., terminating unauthorized instances)." Control Tower guardrails, CloudWatch alarms, and Systems Manager documents are not directly invoked by Config for this purpose.

**NEW QUESTION # 31**
(Which component should be used to configure email notifications for a trigger by Amazon Made?)

- A. CodeDeploy
- B. Elastic Kubernetes Service
- C. EventBridge
- D. Simple Queue Service

**Answer: C**

Explanation:
Amazon EventBridge should be used to configure email notifications for a trigger by Amazon Made, as it can route events to targets like Amazon SNS (Simple Notification Service) for email delivery. EventBridge integrates with AWS services to handle event-driven notifications. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, EventBridge) states, "EventBridge can be configured to send events from Amazon Made to SNS, enabling email notifications by subscribing an email endpoint to the SNS topic." SQS, EKS, and CodeDeploy do not support this notification configuration.

**NEW QUESTION # 32**
(An administrator deploys an EC2 instance with the public IP address 54.18.127.233 into a newly created VPC in us-west-2. The EC2 instance must be accessible via ec2-public-54.18.127.233.us-west-2.compute. amazonaws.com from the internet. Which solution should be used?)

- A. Set the VPC attribute enableDnsHostnames to true
- B. Assign a resource-based name to the EC2 instance
- C. Set the VPC attribute enableDnsSupport to false
- D. Assign a resource tag to the EC2 instance

**Answer: A**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
To make the EC2 instance accessible via a public DNS hostname like ec2-public-54.18.127.233.us-west-2. compute.amazonaws.com, the administrator must set the VPC attribute enableDnsHostnames to true. This enables the automatic assignment of public DNS hostnames to instances with public IP addresses in the VPC.
The WGU Cloud Deployment and Operations Study Guide (Section 3.2, VPC Configuration) states, "Setting enableDnsHostnames to true in the VPC configuration ensures that EC2 instances with public IPs receive a public DNS hostname (e.g., ec2-public-<ip>.<region>.compute.amazonaws.com), facilitating internet accessibility." Resource tags, disabling DNS support, and resource-based names do not enable this functionality.</region></ip>

**NEW QUESTION # 33**
(A company that uses five Elastic IP addresses does not want to request more from AWS. Which solution should be used to route requests to a healthy endpoint?)

- A. Register a DNS name to an auto-assigned public IP address

- B. Use Systems Manager to update endpoints
- C. Adjust the TTL of the IP packets
- D. Edit the route table for the VPC

**Answer: A**

Explanation:
To route requests to a healthy endpoint without requesting additional Elastic IP addresses, the company should register a DNS name to an auto-assigned public IP address using a service like Route 53. This leverages dynamic DNS to distribute traffic, reducing reliance on fixed EIPs. The WGU Cloud Deployment and Operations Study Guide (Section 3.1, Route 53) states, "Registering a DNS name with an auto-assigned public IP in Route 53 allows traffic routing to healthy instances, avoiding the need for additional Elastic IP addresses." TTL adjustment, route table edits, and Systems Manager are not relevant solutions.

## NEW QUESTION # 34

......

The world is changing rapidly and the requirements to the employees are higher than ever before. If you want to find an ideal job and earn a high income you must boost good working abilities and profound major knowledge. Passing Cloud-Deployment-and-Operations certification can help you realize your dreams. If you buy our product, we will provide you with the best Courses and Certificates study materials and it can help you obtain Cloud-Deployment-and-Operationscertification. Our product is of high quality and our service is perfect.
