

# 2026 Workday-Prism-Analytics Reliable Test Objectives | Reliable Workday Workday-Prism-Analytics Testking Exam Questions: Workday Pro Prism Analytics Exam

P.S. Free & New Workday-Prism-Analytics dumps are available on Google Drive shared by PassSureExam:  
[https://drive.google.com/open?id=137\\_Q0Axy79S0Gv3d4RNZ1IrL5eNKVacj](https://drive.google.com/open?id=137_Q0Axy79S0Gv3d4RNZ1IrL5eNKVacj)

According to the survey, the average pass rate of our candidates has reached 99%. High passing rate must be the key factor for choosing, which is also one of the advantages of our Workday-Prism-Analytics real study dumps. In order to get more chances, more and more people tend to add shining points, for example a certification to their resumes. What you need to do first is to choose a right Workday-Prism-Analytics Exam Material, which will save your time and money in the preparation of the Workday-Prism-Analytics exam. Our Workday-Prism-Analytics latest questions is one of the most wonderful reviewing Workday Pro Prism Analytics Exam study training dumps in our industry, so choose us, and together we will make a brighter future.

Sharp tools make good work. Valid Workday-Prism-Analytics test questions and answers will make your exam easily. If you still feel difficult in passing exam, our products are suitable for you. Workday-Prism-Analytics test questions and answers are worked out by PassSureExam professional experts who have more than 8 years in this field. With so many years' development, we can keep stable high passing rate for Workday Workday-Prism-Analytics Exam. You will only spend dozens of money and 20-30 hours' preparation on our Workday-Prism-Analytics test questions, passing exam is easy for you.

## Workday Workday-Prism-Analytics Testking Exam Questions, Workday-Prism-Analytics Valid Test Voucher

The study materials from our company can help you get your certification easily, we believe that you have been unable to hold yourself back to understand our Workday Pro Prism Analytics Exam guide torrent, if you use our study materials, it will be very easy for you to save a lot of time. In order to meet the needs of all customers, Our Workday-Prism-Analytics study torrent has a long-distance aid function. If you feel confused about our Workday-Prism-Analytics test torrent when you use our products, do not hesitate and send a remote assistance invitation to us for help, we are willing to provide remote assistance for you in the shortest time.

## Workday Pro Prism Analytics Exam Sample Questions (Q46-Q51):

### NEW QUESTION # 46

A custom report uses your recently published Prism data source, but you noticed a minor error in the published data. You need to delete the published rows to fix it. What happens to your custom report?

- A. The report definition will need to be manually recreated.
- **B. The report definition remains intact and will work after republishing.**
- C. The report definition will be copied and a new version will appear after republishing.
- D. The report definition will need to be edited to reflect changes.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, deleting published rows from a Prism data source (PDS) is a step taken to correct errors in the published data, often followed by republishing the dataset with corrected data. According to the official Workday Prism Analytics study path documents, when you delete the published rows, the report definition remains intact and will work after republishing (option A). The custom report's definition, which is based on the Prism data source, is not affected by the deletion of published rows because the report definition references the data source's structure (e.g., fields and metadata), not the specific data rows. Once the dataset is republished with the corrected data, the report will automatically reflect the updated data without requiring any changes to the report definition, assuming the structure of the data source remains the same.

The other options are incorrect:

\* B. The report definition will need to be manually recreated: The report definition is not deleted or invalidated by deleting published rows, so recreation is not necessary.

\* C. The report definition will be copied and a new version will appear after republishing: Workday does not automatically copy or version report definitions when a data source is republished.

\* D. The report definition will need to be edited to reflect changes: No edits are required unless the structure of the data source (e.g., field names or types) changes, which is not indicated in this scenario.

The report definition's integrity is maintained, and it will function as expected after republishing the corrected data.

#### NEW QUESTION # 47

You have a number of Workday reports that use a Prism data source. When are the values of the Prism calculated fields in the Workday reports calculated?

- A. At dataset creation time.
- B. At the calculated field creation time.
- **C. At time of publishing.**
- D. At report run time.

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, calculated fields in a dataset are evaluated as part of the dataset's processing logic, and their values are materialized when the dataset is published as a Prism data source. According to the official Workday Prism Analytics study path documents, the values of Prism calculated fields are calculated at the time of publishing (option D). When a dataset is published, Prism processes all transformation stages, including calculated fields, and the resulting values are stored in the published data source. Workday reports that use this Prism data source then retrieve these pre-calculated values, ensuring consistent and efficient reporting without recalculating the fields at report run time.

The other options are incorrect:

\* A. At report run time: Calculated field values are not computed when the Workday report is run; they are pre-calculated and stored in the Prism data source during publishing.

\* B. At dataset creation time: Dataset creation involves defining the transformation logic, but the actual computation of calculated fields occurs during publishing, not at creation.

\* C. At the calculated field creation time: Creating a calculated field defines its expression, but the values are not computed until the dataset is processed during publishing.

The calculation of Prism calculated fields at the time of publishing ensures that Workday reports can efficiently access the results without additional computation overhead.

#### NEW QUESTION # 48

You have published a derived dataset to build a Prism data source. For reports using this Prism data source, when is data updated?

- A. At reimport into tables and republish of the datasource.
- B. At reimport into tables only.
- C. At republish of the datasource only.
- D. At report runtime.

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a published Prism data source (PDS) contains a snapshot of data from a derived dataset at the time of publishing. According to the official Workday Prism Analytics study path documents, for reports using a Prism data source, the data is updated at reimport into tables and republish of the datasource (option B). A derived dataset typically sources data from underlying tables (via import stages), and any updates to the source data require two steps: (1) reimporting the updated data into the tables (e.g., via a Data Change task), and (2) republishing the derived dataset to refresh the Prism data source with the new data. Reports using the PDS will reflect the updated data only after both steps are completed, as the data source is a static snapshot until republished.

The other options are incorrect:

\* A. At republish of the datasource only: Republishing alone does not update the data if the underlying tables have not been reimported with new data; both steps are necessary.

\* C. At reimport into tables only: Reimporting into tables updates the source data, but the PDS remains unchanged until the dataset is republished.

\* D. At report runtime: Reports do not dynamically update the PDS at runtime; they use the data as it exists in the PDS at the time of the last publish.

The combination of reimporting into tables and republishing the data source ensures that reports reflect the most current data.

## NEW QUESTION # 49

When using a window function to calculate averages in Prism, what field type must the function operate on?

- A. Date
- B. Numeric
- C. Text
- D. Boolean

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, window functions are used to perform calculations across a set of rows, such as calculating averages with a function like AVG. According to the official Workday Prism Analytics study path documents, the AVG window function, which computes the average, must operate on a field of type Numeric.

This is because averaging requires numerical values to perform arithmetic operations (e.g., summing the values and dividing by the count of rows). Non-numeric field types, such as Text or Date, cannot be averaged, and Boolean fields (true/false) are not suitable for this type of calculation. For example, a window function like AVG(salary) OVER (PARTITION BY department) would calculate the average salary per department, where "salary" must be a Numeric field.

The other options are incorrect:

\* A. Text: Text fields cannot be used for arithmetic operations like averaging.

\* B. Boolean: Boolean fields (true/false) are not suitable for calculating averages.

\* D. Date: Date fields cannot be directly averaged; they require conversion to a numeric representation (e.g., days since a reference date) first.

The requirement for a Numeric field type ensures that the AVG window function can perform the necessary mathematical computations accurately.

### NEW QUESTION # 50

You want to delete a Prism data source, but you are unable to complete the dataset unpublish. You have deleted the Report Writer reports. What else must you delete, if present?

- A. Published rows
- B. Upstream tables
- C. Discovery board visualizations
- D. Upstream datasets

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, unpublishing a dataset to delete a Prism data source requires removing all dependencies that reference the data source. According to the official Workday Prism Analytics study path documents, if you have already deleted Report Writer reports but are still unable to unpublish the dataset, you must also delete any discovery board visualizations that reference the Prism data source (option C). Discovery boards in Workday allow users to create visualizations based on Prism data sources, and these visualizations create a dependency on the data source. If such visualizations exist, the system prevents the dataset from being unpublished until they are removed, ensuring that no downstream dependencies are broken.

The other options are incorrect:

- \* A. Upstream tables: Upstream tables are the source of data for the dataset, but they are not dependencies of the published data source and do not need to be deleted to unpublish the dataset.
- \* B. Published rows: Published rows are part of the data source itself and are removed when the dataset is unpublished; they are not a separate dependency to delete.
- \* D. Upstream datasets: Upstream datasets may feed into the dataset being unpublished, but they are not dependencies of the published data source and do not prevent unpublishing.

Deleting discovery board visualizations ensures all dependencies are cleared, allowing the dataset to be unpublished and the Prism data source to be deleted.
