management, configuration management, scripting, reporting, and more.

ServiceNow Certified System Administrator Sample Questions (Q93-Q98):

NEW QUESTION # 93

When a custom table is created, which access control rules are automatically created?

Choose 4 answers

- A. read
- B. write
- C. delete
- D. update
- E. execute
- F. create

Answer: A,B,C,F

NEW QUESTION # 94

Your customer requires that they be able to monitor which users are performing impersonations in their instance. What would you do to meet that requirement?

- A. Create user update set for impersonation tracking
- B. On the Impersonator role record, right click and select Create Log
- C. Activate the `glide.sys.log_impersonation` prop
- D. Add the role Log Write [`sn_log_write`] to the Impersonator Group
- E. From User icon, select Elevate Roles

Answer: C

Explanation:

To monitor which users are performing impersonations in a ServiceNow instance, administrators can activate the system property `glide.sys.log_impersonation`. When enabled, this property logs impersonation activities in the system logs, providing full traceability of who is impersonating whom.

Here's how it works:

By default, impersonation is not logged unless this system property is explicitly activated.

Once enabled, all impersonation activities are recorded in the syslog table (System Log > All), making it easy to track when and by whom impersonations were performed.

This helps in security audits and compliance tracking, ensuring that only authorized users impersonate others in the system.

Steps to Enable Logging of Impersonations:

Navigate to System Definition > System Properties.

In the filter navigator, search for `glide.sys.log_impersonation`.

Set the value to true.

Save the changes.

Alternative Verification Methods:

Check logs manually: Navigate to System Logs > All and filter logs by message containing "impersonation".

Audit the impersonation role assignments under System Security > Roles.

NEW QUESTION # 95

What are the three key tables in an enterprise CMDB? (Choose three.)

- A. `cmdb`
- B. `sn_cmdb_ci`
- C. `cmdb_bak`
- D. `cmdb_rel_ci`
- E. `sn_cmdb_bak`

- F. sn_cmdb
- G. cmdb_ci

Answer: A,D,G

Explanation:

The Configuration Management Database (CMDB) in ServiceNow is a core component of IT Service Management (ITSM), allowing organizations to track Configuration Items (CIs) and their relationships. There are three key tables that form the foundation of the CMDB:

cmdb (Base CMDB Table):

This is the parent table for all Configuration Items (CIs) in the CMDB.

It contains the foundational structure upon which all other CMDB-related tables are built.

It does not store CI records itself but serves as the primary reference table.

cmdb_ci (CI Base Class Table):

This is the base class for all Configuration Items (CIs).

All specific CI classes (such as servers, applications, networks) extend from this table.

It holds general CI attributes that are common across all CI types.

cmdb_rel_ci (CMDB Relationship Table):

This table defines relationships between different Configuration Items.

It stores dependencies and associations between CIs, such as a server hosting an application.

Relationships are critical for impact analysis and dependency mapping.

B: sn_cmdb_bak & E. cmdb_bak:

These tables do not exist in the standard CMDB schema. They may be mistaken for potential backup tables, but they are not official CMDB tables.

D: sn_cmdb & G. sn_cmdb_ci:

Prefix "sn_" generally indicates Scoped Application Tables in ServiceNow.

Standard CMDB tables exist in the global scope without the "sn_" prefix.

"sn_cmdb" and "sn_cmdb_ci" are not key tables in the global CMDB architecture.

NEW QUESTION # 96

From a related list, what would a user click for personalize the layout of the columns?

- A. Context Menu
- B. Gear
- C. Magnifier
- D. Pencil

Answer: B

Explanation:

In ServiceNow, when a user wants to personalize the layout of the columns in a related list, they need to click the Gear icon (⚙️).

How It Works:

Navigate to a record that contains a related list.

Look at the top-right corner of the related list for the Gear icon.

Click the Gear icon to open the "Personalize List Columns" interface.

From there, the user can add, remove, or rearrange columns in the related list.

Why Other Answers Are Incorrect:

A. Magnifier - A magnifying glass is typically used for search functions but not for column customization.

B. Context Menu - The context menu (right-click) provides other actions but does not allow column layout changes.

C. Pencil - A pencil icon typically represents editing but not column layout customization.

NEW QUESTION # 97

After finishing your work on High Security Settings, what is a possible way to return to normal admin security levels?

- A. Select Normal role
- B. End impersonation
- C. Use System Administration > Normal Security module
- D. Log out and back in
- E. Select Global Update Set

Answer: C
