We have 24 hours service stuff, and if you any questions about XK0-006 training materials, just contact us.

CompTIA Linux+ Certification Exam Sample Questions (Q73-Q78):

NEW QUESTION # 73

A Linux administrator is updating the group membership by executing the following commands:

```
$ whoami
admin

$ sudo usermod -aG wheel admin

$ sudo groups
root
```

However, the group membership is not changing. Which of the following explains this issue?

- A. The options wheel and admin are transposed.
- B. Executing usermod with sudo is not permitted.
- C. Users cannot be added to the wheel group with the usermod command.
- **D. The command groups was run with sudo privileges.**

Answer: D

Explanation:

Running groups with sudo shows the groups for the root user, not for the admin user. That's why the output only shows root. Without sudo, groups admin (or re-login) would correctly show the updated group membership, including wheel.

NEW QUESTION # 74

A user sends a request to access a virtual server via SSH. Which of the following commands is used to open the SSH standard port?

- A. firewall-cmd --remove-service=ssh --permanent
- B. iptables -A INPUT -p tcp --dport sshd -j ACCEPT
- C. iptables-save | grep dport-22/tcp
- **D. firewall-cmd --permanent --add-port=22/tcp**

Answer: D

Explanation:

The firewall-cmd --permanent --add-port=22/tcp command (commonly firewall-cmd) opens TCP port 22 in the permanent firewall ruleset so that SSH traffic is allowed. After running it, you'd issue firewall-cmd --reload to apply the change.

NEW QUESTION # 75

Users cannot access an application that is running inside containers. The administrator wants to validate whether the containers are running. Which of the following commands should the administrator use?

- A. docker images
- **B. docker ps**
- C. docker start
- D. docker run

Answer: B

Explanation:

The docker ps command lists all running containers, allowing the administrator to verify whether the application's containers are active.

NEW QUESTION # 76

Which of the following best describes JSON?

- **A. A file format for exchanging information or data between systems**
- B. A software-based technique that allows a computer to simulate one or more machines so they appear to be real
- C. An open-source platform that facilitates the creation and administration of isolated environments
- D. A programming language that developers use to build dynamic websites

Answer: A

Explanation:

JSON (JavaScript Object Notation) is a lightweight data-interchange format that is easy for humans to read and write, and easy for machines to parse and generate. JSON is commonly used to transmit data between a server and a client, as it is language-independent and can be used in many environments.

NEW QUESTION # 77

A systems administrator needs to write a script that counts the number of times "FAIL" appears in a log file. If "FAIL" appears zero times, then the administrator would like to print the message "SUCCESS." Given the following:

```
if [ $(grep -c FAIL /var/file.log) ___ 0 ]
then
    echo SUCCESS
else
    echo FAIL
fi
```

Which of the following should be used before the zero to complete the script?

- A. -lt
- **B. -eq**
- C. -ne
- D. -gt

Answer: B

Explanation:

The test should check if the count of "FAIL" equals zero. The operator -eq is used for numeric equality in shell conditionals, so [\$(grep -c FAIL /var/file.log) -eq 0] correctly evaluates whether the count is zero.

NEW QUESTION # 78

.....

Our XK0-006 exam torrent is finalized after being approved by industry experts and XK0-006 Practice Materials are tested by professionals with a high pass rate as 99%. Besides, XK0-006 Learning Guide helps establish your confidence and avoid wasting time. That is because our XK0-006 Practice Test can serve as a conducive tool for you make up for those hot points you have ignored, you will have every needed XK0-006 exam questions and answers in the actual exam to pass it.
