There are totally three versions of Salesforce-MuleSoft-Developer-I practice materials which are the most suitable versions for you: PDF, software and app versions. We promise ourselves and exam candidates to make these Salesforce-MuleSoft-Developer-I preparation prep top notch. So if you are in a dark space, our Salesforce-MuleSoft-Developer-I Study Guide can inspire you make great improvements. With the high pass rate of our Salesforce-MuleSoft-Developer-I learning engine as 98% to 100%, you can be confident and ready to pass the exam easily.

Salesforce Salesforce-MuleSoft-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	• Designing APIs: Designing APIs involves describing the lifecycle of the modern API and using RAML to define various aspects of an API. It includes identifying when to use query parameters vs URI parameters, and defining API parameters.

Topic 2	• Handling Errors: Handling errors includes describing default error handling in Mule applications and defining custom global default error handlers. It involves comparing On Error Continue and On Error Propagate scopes, creating error handlers for a flow, using the Try scope, and mapping errors to custom application errors.
Topic 3	• Transforming Data with DataWeave: It involves writing DataWeave scripts and using DataWeave functions. This topic also includes defining and using DataWeave variables, functions, and modules, and applying correct syntax.
Topic 4	• Using Connectors: It focuses on retrieving data from REST services using HTTP Request or REST Connector. Moreover, the topic covers using a Web Service Consumer connector for SOAP web services and the Transform Message component.
Topic 5	• Processing Records: Processing records includes methods for processing individual records in a collection and explaining how Mule events are processed by the For Each scope. It also involves using the Batch Job with Batch Steps and a Batch Aggregator.
Topic 6	• Creating Application Networks: The topic of creating Application Networks encompasses understanding MuleSoft's proposal for closing the IT delivery gap and describing the role and characteristics of the modern API. It also includes the purpose and roles of a Center for Enablement (C4E), and the benefits of API-led.
Topic 7	• Routing Events: It focuses on using the Choice router for conditional logic and the Scatter-Gather router to multicast events. This topic also involves validating data by using the Validation module.

Salesforce Study Salesforce-MuleSoft-Developer-I Materials: Salesforce Certified MuleSoft Developer (Mule-Dev-201) - Test4Sure Purchasing Safely and Easily

If you are preparing for the practice exam, we can make sure that the Salesforce-MuleSoft-Developer-I study materials from our company will be the best choice for you, and you cannot find the better study materials than our company'. There are a lot of advantages of our Salesforce-MuleSoft-Developer-I Study Materials, and then, I am going to introduce the special functions of our Salesforce-MuleSoft-Developer-I study materials in detail to you. We are hopeful that you will like our products.

Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q169-Q174):

NEW QUESTION # 169

Refer to the exhibits.

```

<flow name="getFlights">
  <http:listener doc:name="HTTP: GET /flights" config-ref="HTTP_Listener_config" path="/flights"/>
  <set-payload value='<ns2:listAllFlightsResponse xmlns:ns2="http://soap.training.mulesoft.com/">
    <return>
      <airlineName>Delta</airlineName>
      <code>A1B2C3</code>
      <departureDate>2015/03/20</departureDate>
    </return>
  </ns2:listAllFlightsResponse>' doc:name="Set to XML"/>
  <ee:transform doc:name="typeOf(payload)" doc:id="43898508-15e2-4cb7-8d0b-bd9c2929209e">
    <ee:message><ee:set-payload><![CDATA[{{
      output application/json
      typeOf(payload)}}]></ee:set-payload>
    </ee:message>
  </ee:transform>
</flow>

```

A web client submits a request to [http://localhost:8081 /flights](http://localhost:8081/flights). What is the result at the end of the flow?

- A. "Java"
- B. "string"
- C. "object"
- D. "XML"

Answer: B

NEW QUESTION # 170

Refer to the exhibits.

All three of the conditions for the Choice router are true. What messages are written in the application log?

- A. Route2
- **B. Route1**
- C. Route1,Route2
- D. Route1,Route2,Default

Answer: B

Explanation:

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes. Hence only Route1 will be executed as it is the first expression. Hence output of logger is Route1.

MuleSoft Doc Ref: <https://docs.mulesoft.com/mule-runtime/4.3/choice-router-concept> The Choice router dynamically routes messages through a flow according to a set of DataWeave expressions that evaluate message content. Each expression is associated with a different routing option. The effect is to add conditional processing to a flow, similar to an if/then/else code block in most programming languages.

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes.

Diagram Description automatically generated

NEW QUESTION # 171

An API specification is designed using RAML. What is the next step to create a REST Connector from this API specification?

- A. Add the specification to a Mule project's src/main/resources/api folder
- B. Publish the API specification to Any point Exchange
- C. Implement the API specification using flow designer in Design Center
- D. Download the API specification and build the interface using APIkit

Answer: B

Explanation:

API Exchange creates REST connector automatically once API is published. Hence correct answer is Publish the API specification to Any point Exchange

NEW QUESTION # 172

Refer to the exhibits.

Payload

```
{
  "transaction_id": "SS-4848-44KK-4SYQ",
  "account_id": "AA-382-SYNA",
  "name": "Max",
  "position": "sell"
}
```

salesforce

```
<flow name="writeRecords" >
  <http:listener doc:name="HTTP: POST /records" config-ref="HTTP_Listener_config"
    path="/records" allowedMethods="POST"/>
  <ee:transform doc:name="Add write_date">
    <ee:message >
      <ee:set-payload ><![CDATA[%dw 2.0
        output application/json
        ---
        payload ++ {"write_date": now()}]]>
      </ee:set-payload>
    </ee:message>
  </ee:transform>
  <file:write doc:name="File: records.csv" path="file-store/records.csv">
    <file:content ><![CDATA[#payload]]></file:content>
  </file:write>
</flow>
```

What is written to the records.csv file when the flow executes?

- A. The JSON payload
- B. Nothing
- C. An error message
- D. The payload convert to CVS

Answer: A

Explanation:

Transform Message Add write_date is converting payload in JSON format and same JSON payload is available to file write processor. However, if the payload is a different format (for example, not CSV), you can place the transformation inside the Write operation to generate content that will be written without producing a side effect on the message in transit. This is not done in this case. By default, the connector writes whatever is in the message payload. Hence JSON payload will be written to file.

NEW QUESTION # 173

Refer to the exhibits.

The main flow contains a Flow Reference component configured to call the child flow. What part(s) of a Mule event passed to the Flow Reference component are available in the child flow?

- A. The payload and all attributes
- B. The entire Mule event
- C. The payload and all variables
- D. The payload

Answer: C

NEW QUESTION # 174

.....

If you buy the Salesforce Salesforce-MuleSoft-Developer-I practice materials within one year you can enjoy free updates. Being the most competitive and advantageous company in the market, our Salesforce Certified MuleSoft Developer (Mule-Dev-201) Salesforce-MuleSoft-Developer-I exam questions have helped tens of millions of exam candidates, realized their dreams all these years. What you can harvest is not only certificate but of successful future from now on just like our former clients.
