

Want to Get Ping Identity PAP-001 Certified? Rely on TestKingIT's Exam Questions for Easy Success

P.S. Free & New PAP-001 dumps are available on Google Drive shared by TestKingIT: <https://drive.google.com/open?id=1pjM-9lQjoZdbCRwZbLUG9KnuHnq0v6bd>

We can calculate that PAP-001 certification exam is the best way by which you can learn new applications, and tools and mark your name in the list of best employees in your company. You don't have to be dependent on anyone to support you in your professional life, but you have to prepare for TestKingIT real Certified Professional - PingAccess (PAP-001) exam questions.

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.
Topic 2	Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.
Topic 3	Installation and Initial Configuration: This section of the exam measures skills of System Engineers and reviews installation prerequisites, methods of installing or removing PingAccess, and securing configuration database passwords. It explains the role of run.properties entries and outlines how to set up a basic on-premise PingAccess cluster.

Buy TestKingIT Ping Identity PAP-001 Questions Now And Get Free Updates

If you buy TestKingIT's Ping Identity certification PAP-001 exam practice questions and answers, you can not only pass Ping Identity certification PAP-001 exam, but also enjoy a year of free update service. If you fail your exam, TestKingIT will full refund to you. You can free download part of practice questions and answers about Ping Identity Certification PAP-001 Exam as a try to test the reliability of TestKingIT's products.

Ping Identity Certified Professional - PingAccess Sample Questions (Q41-Q46):

NEW QUESTION # 41

An application requires MFA for URLs that are considered high risk. Which action should the administrator take to meet this requirement?

- A. Apply an HTTP Request Parameter rule to the resource.
- B. Apply a Web Session Attribute rule to the resource.
- C. Create an Authentication Requirement named MFA_Required.
- D. Apply an Authentication Requirements rule to the resource.

Answer: D

Explanation:

PingAccess allows fine-grained authentication enforcement by applying Authentication Requirement rules at the resource level. These rules can invoke MFA flows based on request context or policy.

Exact Extract:

"Authentication requirement rules determine whether PingAccess challenges a user to authenticate again (for example, with MFA) before allowing access to a protected resource."

* Option A is incomplete. Creating a requirement does nothing unless it is applied.

* Option B is correct because applying the Authentication Requirement rule to the specific resource (URL) enforces MFA only for that resource.

* Option C is incorrect; Web Session Attribute rules are about evaluating existing session attributes, not triggering MFA.

* Option D is incorrect; HTTP Request Parameter rules are used to evaluate request data, not enforce MFA policies.

NEW QUESTION # 42

How many administrators are supported using HTTP Basic Authentication in the Administrative Console?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

When using HTTP Basic Authentication (admin.auth= native), PingAccess only supports a single administrative account (the default admin user). For multiple administrators, SSO integration (e.g., OIDC) is required.

Exact Extract:

"When admin authentication is set to native (HTTP Basic), only one administrative user is supported. For multiple admins, configure UI authentication with an OIDC provider."

* Option A (1000) is incorrect.

* Option B (1) is correct - only one basic auth admin account.

* Option C (10) and Option D (100) are incorrect.

NEW QUESTION # 43

An administrator is integrating a new PingAccess Proxied Application. The application will temporarily need a self-signed certificate during the POC/demo phase. PingAccess is terminating SSL and is responsible for loading the SSL certificate for the application. What initial action must the administrator take in PingAccess in this situation?

- A. Go to the Certificates section and create a new certificate
- B. Go to the Key Pairs section and import the PKCS#12 file provided by the customer's internal Certificate Authority
- C. Go to the Key Pairs section and import the PKCS#12 file provided by the publicly trusted Certificate Authority
- **D. Go to the Key Pairs section and create a new certificate**

Answer: D

Explanation:

For SSL termination, PingAccess requires a Key Pair (certificate + private key). During a POC/demo, when a self-signed certificate is used, the administrator can create it directly in the Key Pairs section of the console.

Exact Extract:

"Use the Key Pairs section to create self-signed certificates for testing or proof-of-concept deployments. For production, import a PKCS#12 file containing a certificate chain and private key."

- * Option A is incorrect - Certificates store trust anchors (CAs), not SSL termination certs.
- * Option B is incorrect - an internal CA-signed cert requires PKCS#12 import, not self-signed creation.
- * Option C is incorrect - a publicly trusted CA is not used for a demo phase.
- * Option D is correct - creating a new certificate in Key Pairs generates a self-signed cert suitable for demos.

NEW QUESTION # 44

Which of the following is a processing rule?

- A. HTTP Request Parameter
- **B. Cross-Origin Request**
- C. HTTP Request Header
- D. Web Session Attribute

Answer: B

Explanation:

PingAccess rules are categorized into Access Control Rules and Processing Rules.

- * Processing Rules modify or add to HTTP requests and responses.
- * Cross-Origin Request (CORS) is specifically listed as a Processing Rule, because it modifies response headers to support cross-origin requests.

Exact Extract:

"Processing rules apply to HTTP traffic, such as Cross-Origin Resource Sharing (CORS), header injection, or response modification."

- * Option A (Web Session Attribute) is an access control rule.
- * Option B (Cross-Origin Request) is correct - this is a processing rule.
- * Option C (HTTP Request Parameter) is an access control rule.
- * Option D (HTTP Request Header) is an access control rule.

NEW QUESTION # 45

A business application must be accessible via two FQDNs. Which PingAccess functionality should an administrator use to meet this requirement?

- A. Web Sessions
- B. Applications
- **C. Virtual Hosts**
- D. Sites

Answer: C

Explanation:

Virtual Hosts in PingAccess define the external FQDNs (and ports) through which applications are accessed.

An application can be bound to multiple virtual hosts to allow access via multiple FQDNs.

Exact Extract:

"A virtual host specifies the fully qualified domain name and port number through which an application is accessed."

* Option A (Virtual Hosts) is correct - multiple FQDNs can be supported by assigning multiple virtual hosts.

* Option B (Applications) define resource protection but do not manage FQDN binding.

* Option C (Sites) define back-end targets, not the public-facing FQDN.

* Option D (Web Sessions) handle authentication state, unrelated to hostnames.
