Exam Professional-Cloud-Database-Engineer Course | Professional-Cloud-Database-Engineer Online Training Materials

Are you struggling to prepare Google certification Professional-Cloud-Database-Engineer exam? Do you want to achieve the goal of passing Google certification Professional-Cloud-Database-Engineer exam as soon as possible? You can choose the training

materials provided by ExamTorrent. If you choose ExamTorrent, passing Google Certification Professional-Cloud-Database-Engineer Exam is no longer a dream.

Google Professional-Cloud-Database-Engineer Certification Exam is a challenging and in-depth exam that requires a deep understanding of foundational database concepts, as well as advanced knowledge of Google Cloud Platform's database services. Candidates who successfully complete the Google Cloud Certified - Professional Cloud Database Engineer exam demonstrate their expertise in designing, implementing, and managing databases on the Google Cloud Platform.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q50-Q55):

NEW QUESTION # 50
Your company is developing a new global transactional application that must be ACID-compliant and have 99.999% availability. You are responsible for selecting the appropriate Google Cloud database to serve as a datastore for this new application. What should you do?

- A. Use Cloud SQL.
- B. Use Bigtable.
- C. Use Firestore.
- D. Use Cloud Spanner.

Answer: D

NEW QUESTION # 51
You have an application that sends banking events to Bigtable cluster-a in us-east. You decide to add cluster-b in us-central1. Cluster-a replicates data to cluster-b. You need to ensure that Bigtable continues to accept read and write requests if one of the clusters becomes unavailable and that requests are routed automatically to the other cluster. What deployment strategy should you use?

- A. Use the default app profile with multi-cluster routing.
- B. Create a custom app profile with multi-cluster routing.
- C. Create a custom app profile with single-cluster routing.
- D. Use the default app profile with single-cluster routing.

Answer: D

NEW QUESTION # 52
You are managing a small Cloud SQL instance for developers to do testing. The instance is not critical and has a recovery point objective (RPO) of several days. You want to minimize ongoing costs for this instance. What should you do?

- A. Take no backups, and turn off transaction log retention.
- B. Turn on automated backup, and turn on transaction log retention.
- C. Take one manual backup per day, and turn off transaction log retention.
- D. Turn on automated backup, and turn off transaction log retention.

Answer: D

Explanation:
https://cloud.google.com/sql/docs/mysql/backup-recovery/backups

NEW QUESTION # 53
You work in the logistics department. Your data analysis team needs daily extracts from Cloud SQL for MySQL to train a machine learning model. The model will be used to optimize next-day routes. You need to export the data in CSV format. You want to follow Google-recommended practices. What should you do?

- A. Use Cloud Composer to execute a select * from table(s) query and export results.
- B. Use Cloud Scheduler to trigger a Cloud Function through Pub/Sub to call the cloudsql.instances.export API.

- C. Use Cloud Composer to orchestrate an export by calling the cloudsql.instances.export API.
- D. Use Cloud Scheduler to trigger a Cloud Function that will run a select * from table(s) query to call the cloudsql.instances.export API.

Answer: B

Explanation:

NEW QUESTION # 54

Your organization has a critical business app that is running with a Cloud SQL for MySQL backend database.
Your company wants to build the most fault-tolerant and highly available solution possible. You need to ensure that the application database can survive a zonal and regional failure with a primary region of us- central1 and the backup region of us-east1. What should you do?

- A. Provision a Cloud SQL for MySQL instance in us-central1-a.
  Create a multiple-zone instance in us-east1-b.
  Create a read replica in us-central1-b.
- B. Provision a Cloud SQL for MySQL instance in us-central1-a.
  Create a multiple-zone instance in us-central1-b.
  Create a read replica in us-east1-b.
- C. Provision a Cloud SQL for MySQL instance in us-central1-a.
  Create a multiple-zone instance in us-east-b.
  Create a read replica in us-east1-c.
- D. Provision a Cloud SQL for MySQL instance in us-central1-a.
  Create a multiple-zone instance in us-west1-b.
  Create a read replica in us-east1-c.

Answer: B
