최신 Salesforce Administrator Plat-Admn-301 무료샘플문제 (Q44-Q49):

질문 # 44
The accounting team at Universal Containers is looking to roll out two new custom objects: a parent Invoice object and a child Payment object. Whenever a Payment record is created, the Invoice object should be updated to reflect the current outstanding value of the Invoice.
What should the administrator do to build this functionality?

- A. Create a master-detail relationship on the Payment and a workflow cross object field update.
- B. Create a lookup-relationship on the Payment and a workflow cross object field update.
- C. Create a master-detail relationship on the Payment with a Roll-up Summary field on the Invoice.
- D. Create a lookup-relationship on the Payment with a Roll-up Summary field on the Invoice.

정답：C

설명：
Creating a master-detail relationship on the Payment with a Roll-up Summary field on the Invoice will build this functionality. A master-detail relationship creates a parent-child relationship between two objects, where the child records inherit the sharing and security settings of their parent. A Roll-up Summary field calculates values from related child records, such as count, sum, min, or max. In this case, the Roll-up Summary field on the Invoice can calculate the sum of all Payments related to it and subtract it from the Invoice amount to get the current outstanding value. 질문 # 45
Sales management wants a small subset of users with different profiles and roles to be able to view all data for compliance purposes.
How can an administrator meet this requirement?

- A. Enable the View All Data permission for the roles of the subset of users.
- B. Assign delegated administrator to the subset of users to View All Data.
- C. Create a permission set with the View All Data permission for the subset of users.
- D. Create a new profile and role for the subset of users with the View All Data permission.

정답：C

설명：
A permission set is a collection of settings and permissions that give users access to various tools and functions. The View All Data permission allows users to view all data, regardless of sharing settings. By creating a permission set with this permission and assigning it to the subset of users, the administrator can meet the requirement without changing their profiles or roles. References:

질문 # 46

The AW Computing administrator team does significant amounts of work around process automation and ensuring data integrity.
When an administrator created a new validation rule in production, the development team complained that their deployment to production failed.
What should be implemented to prevent this conflict from happening?

- A. Test changes in a shared sandbox.
- B. Refresh the full copy sandbox daily.
- C. Build automation and validation rules using screen flows.
- D. Review the setup audit trail prior to changes.

정답：A

설명：

A sandbox is a copy of a production org that can be used for development, testing, or training purposes.
Sandboxes allow administrators to make changes and test them without affecting the live production org. A shared sandbox is a type of sandbox that can be used by multiple users or teams to collaborate on development or testing projects. By testing changes in a shared sandbox, the AW Computing administrator team can avoid conflicts and errors when deploying changes to production.

질문 # 47

Sales teams at Cloud Kicks ask each visiting customer to fill out a form that capturing their contact information and some basic footwear preferences. This information is saved to a spreadsheet and used by the sales team to alert their contacts when new shows are added to the inventory that matches their preferences.
The sales team wants to be able to track this in Salesforce and see the information when viewing the contact Record.
Which two ways should the administrator configure this requirement?
Choose 2 answers

- A. Schema Builder
- B. Data Loader
- C. Lookup Field
- D. Lightning Object Creator

정답：B,D

설명：

Data Loader is a tool that allows administrators to import, export, insert, update, delete, or upsert records in Salesforce using CSV files. Data Loader can handle large data sets and complex data transformations. Data Loader can be used to import records for a custom object from a spreadsheet. Lightning Object Creator is a tool that allows administrators to create custom objects in Salesforce from spreadsheets. Lightning Object Creator can automatically map spreadsheet columns to fields and create relationships between objects.
Lightning Object Creator can be used to create a custom object from a spreadsheet and import records at the same time.

질문 # 48

Northen trail Outfitters (NTO) wants to change the current master-detail relationship between Shipments and Opportunity to a lookup relationship. The system administrator has made the necessary changes in a full sandbox and has successfully tested them against NTO's data.
Now that the changes are ready to implement in production, what should the system administrator do next?

- A. Add the components to an outbound change set and deploy it to production.
- B. Use Data Loader to export the changes to the production org.

- C. Make the changes directly in the production org.
- D. Create an Unmanaged Package to distribute to production.

정답：A

설명：

To make sure that the changes are in production, you need to add the components to an outbound change set and deploy it to production. A change set is a tool that allows you to send customizations from one Salesforce org to another. A change set can contain components such as objects, fields, profiles, permission sets, workflows, and more. You can use change sets to migrate changes from a sandbox org to a production org or between two sandbox orgs that are affiliated with the same production org. In this case, you need to add the master-detail field and all the affected profiles to an outbound change set in your sandbox org and then deploy it to your production org.
